

Computations for the paper

Representations of the unitary group $SU(2,1)$

in Fourier term modules

Roelof Bruggeman and Roberto Miatello

Some of the computations in this notebook are an essential part of the corresponding book, others are checks of hand computations.

Practical remark

The sections in this notebook are reasonably independent. There are some macros used in many sections; these are carried out at initialization.

The other macros are defined in the section where they are used. Carry out the commands from the start of each section.

- Chapter 2 with Sections 1-6
- Chapter 3 with Sections 7-16
- Chapter 4 with Sections 17-25
- Chapter 5 with Sections 26-27
- Appendix
