## INTRODUCTION

### I.

FROM his own day well into the Renaissance Claudius Ptolemy's name was well-nigh pre-eminent in astronomy, geography, and astrology alike. "The divine Ptolemy," he is called by Hephæstion of Thebes,<sup>1</sup> and the expression shows that the reverence accorded him fell little short of idolatry. In such circumstances it is surprising that all we know of Ptolemy's personal history must be pieced together from passages in his own works, two scholia in ancient manuscripts, and brief notices to be found in later writers, some of them Arabian.<sup>2</sup> The result, when the reliable is summed up and the false or fanciful subtracted, is meagre indeed. We can probably rely upon the reports that he was born at Ptolemaïs in Egypt<sup>3</sup> and lived to the age of 78;<sup>4</sup> he tells us that his astronomical observations were made on the

<sup>1</sup> In *Catalogus Codicum Astrologicorum Graecorum* (hereafter cited as *CCAG*), viii. 2, p. 81, 2.

<sup>2</sup> The sources are collected and discussed by F. Boll, "Studien über Claudius Ptolemäus," *Jahrb. f. Cl. Ph.*, Supplementbd. xxi. 1894, pp. 53-66 (hereafter cited as Boll, *Studien*).

<sup>3</sup> Theodore of Melitê is the authority; Boll, *op. cit.*, pp. 54-55. An eleventh-century work of Abulwafa (*ibid.*, pp. 58-62) gave rise to the belief that he was born at Pelusium, so that, *e.g.*, he is called Πηλουσιεύς in the title of the first edition of the *Tetrabiblos*.

<sup>4</sup> This comes from Abulwafa.

## PTOLEMY

parallel of Alexandria, which convinces Boll that Alexandria was his home, although there is another tradition<sup>1</sup> that for 40 years he observed at Canopus, which was about 15 miles east of Alexandria, and it is known that he erected votive stelae in the temple at Canopus inscribed with the fundamental principles of his doctrines.<sup>2</sup> Combining the various traditions with the fact that the earliest of his observations recorded in the *Almagest* was made in 127 and the latest in 151, we may conclude, further, that his life fell approximately in the years 100-178,<sup>3</sup> covering the first three-quarters of the second century of our era and the reigns of Trajan, Hadrian, Antoninus Pius, and Marcus Aurelius.

A detailed and not too flattering description of Ptolemy's personal appearance and habits goes back, again, to the Arabic tradition, and has been repeated in some of the modern editions of Ptolemy's works,<sup>4</sup>

<sup>1</sup> Preserved by Olympiodorus (fourth century), *In Plat. Phaed.*, p. 47, 16 (Finckh).

<sup>2</sup> Boll, *Studien*, p. 66. Heiberg gives the text in his edition of the *Opera astronomica minora* of Ptolemy (Leipzig, 1907), pp. 149 ff.

<sup>3</sup> This is Boll's conclusion (*op. cit.*, p. 64), accepted by Christ, *Griechische Literaturgeschichte*, 6th ed., 1924, ii. 2, p. 896. Boll, *ibid.*, pp. 63, 65, cites the passages of the *Almagest* which refer to the dated observations. He points out that a very slight change in the text of *Almagest*, x. 1, would make the date of the latest observation 141 instead of 151, but though this would, perhaps, agree better with some of the traditions, there is no real reason for altering the figure.

<sup>4</sup> *E.g.* in the preface of the Latin version of the *Almagest* published at Venice in 1515; and the preface of the translation of the *Tetrabiblos* by Whalley (see below, p. xiii).

## INTRODUCTION

but on examination it proves to be nothing but the stock characterization of the philosopher given by the Greek physiognomists.<sup>1</sup> There is, in fact, no more to be learned about Ptolemy from external sources, and his own works contain little that is biographical. We learn from them, however, that he took, in general, an Aristotelian position philosophically, though his predilection for mathematics led him to regard that division of science with far greater reverence than the more biologically minded Aristotle.<sup>2</sup> One of his minor works and chapters in the longer ones are philosophical and testify to his knowledge of and interest in the subject. Though he was himself amply capable of original thought, he was acquainted with the work and writings of his predecessors, of Menelaüs in mathematics, of Hipparchus in astronomy, of Marinus of Tyre in geography, of Didymus in music, and of Posidonius in astrological ethnology and the arguments whereby astrology was defended. He drew freely and openly from them, and had the gift of systematizing the materials with which he dealt, a characteristic which is especially evident in the *Tetrabiblos*.

The works, genuine and false, ascribed to Ptolemy are: (1) the *Almagest* or *Syntaxis Mathematica*, in 13 books, the great treatise on astronomy; (2) *Φάσεις ἀπλανῶν ἀστέρων καὶ συναγωγὴ ἐπισημασιῶν* ("On the Apparitions of the Fixed Stars and a Collection of Prognostics"); (3) *Ἐπιπέσεις τῶν πλανωμένων* ("On the Planetary Hypothesis"); (4) *Κανῶν βασιλειῶν* ("Table of Reigns"), a chrono-

<sup>1</sup> Boll, *Studien*, pp. 58-62.

<sup>2</sup> *Op. cit.*, pp. 66-111, 131-163.

## PTOLEMY

logical table of reigns; (5) 'Αρμονικῶν βιβλία γ' ("On Music," in three books); (6) the *Tetrabiblos*, of which later; (7) *Περὶ ἀναλήμματος*, *De Analemmate*, the description of a sphere on a plane (extant only in translation); (8) *Planisphaerium*, "The Planisphere"; (9) the *Optics*, in 5 books (its genuineness has been doubted); (10) the *Καρπός* or *Centiloquium*, a collection of astrological aphorisms (generally thought to be spurious); (11) the *Geography*; (12) the *Πρόχειροι κανόνες* or "Ready (astronomical) Tables"; (13) *Προχείρων κανόνων διάταξις καὶ ψηφοφορία*, "Scheme and Manipulation of the Ready Tables"; (14) *Περὶ κριτηρίου καὶ ἡγεμονικοῦ*, a short treatise dealing with the theory of knowledge and the soul. Of these, the *Almagest*, since it is mentioned in the *Geography*, the *Ἐποθέσεις*, and the *Tetrabiblos*, and since it contains no reference to observations after the year 151, was certainly not the latest. The three books mentioned, and possibly others, belong to the last third of the author's life.

## II.

The treatise with which we are especially concerned is now, and usually has been, called the *Tetrabiblos* or *Quadripartitum*. but more accurately it should be *Μαθηματικὴ τετράβιβλος σύνταξις*, "Mathematical Treatise in Four Books," which is the title found in some of the MSS.<sup>1</sup> and is likely to have been that used by Ptolemy himself. Many of the MSS. however, use the title *Τὰ πρὸς*

<sup>1</sup> *E.g.* N (see below). *Τετράβιβλος* alone is used by P and E.

## INTRODUCTION

Σύρον ἀποτελεσματικά,<sup>1</sup> “The Prognostics addressed to Syrus,” in which certain of them substitute the similar but less common word συμπερασματικά for ἀποτελεσματικά.<sup>2</sup> The book is a systematic treatise on astrology, but it should be remembered that in Ptolemy’s time the two words ἀστρολογία and ἀστρονομία meant much the same thing, “astronomy,” and that he called what we mean by “astrology” τὸ δι’ ἀστρονομίας προγνωστικόν,<sup>3</sup> “prognostication through astronomy,” which indeed it was, in his estimation.

In antiquity and the middle ages no one thought it inconsistent with Ptolemy’s reputation as a scientific astronomer that he should also have written upon astrology, and consequently the *Tetrabiblos* passed without question as genuine.<sup>4</sup> More lately, however, this wedding of astrology to astronomy has come to seem incongruous and for that reason the authenticity of the work has been challenged by certain scholars.<sup>5</sup> In this brief introduction the question, of course, cannot be argued fully. There are, however, two reasons for dismissing any doubts concerning the authorship of the book. The first is that by the second century of our era the triumph of astrology

<sup>1</sup> *E.g.* VMDE. Syrus is otherwise unknown. The Anonymous who comments on the *Tetrabiblos* says that some considered it a fictitious name, others that Syrus was a physician skilled in astrology. Several other works of Ptolemy—notably the *Almagest*—are dedicated to him.

<sup>2</sup> *E.g.* A. <sup>3</sup> *Tetrabiblos*, i. *ad init.*

<sup>4</sup> Boll, *Studien*, pp. 127-131.

<sup>5</sup> Chiefly Hultsch. *Cf.* Boll’s remarks in his paper “Zur Ueberlieferungsgeschichte der griechischen Astrologie und Astronomie,” *Sitzungsber. d. Münch. Ak., phil.-hist. Cl.*, 1899, pp. 77 ff.

## PTOLEMY

was complete.<sup>1</sup> With few exceptions every one, from emperor to the lowliest slave, believed in it, and having weathered the criticism of the New Academy, astrology was defended by the powerful Stoic sect. Its position was strengthened by the prevalence of stellar and solar religion throughout the world, and it even captured the sciences, such as medicine, botany, mineralogy, chemistry, and ethnography. Furthermore, this continued to be the situation, in general, well into the Renaissance. Regiomontanus, Copernicus, Tycho Brahe, Galileo, Kepler, and Leibnitz all either practised astrology themselves or countenanced its practice. There is really no basis, therefore, for thinking it incongruous that Ptolemy should have believed in astrology or written upon it. The second reason for accepting him as the author of the *Tetrabiblos* is, as Boll<sup>2</sup> has sufficiently demonstrated, that the book, in its general philosophic views, its language, and its astronomy, is entirely in accord with the Ptolemaic works whose genuineness has never been questioned. These arguments are too lengthy to be repeated here.

### III.

Though the *Tetrabiblos* enjoyed almost the authority of a Bible among the astrological writers of a thousand years or more, its Greek text has been

<sup>1</sup> See, for example, Chapters II-III of Boll-Bezold, *Stern Glaube und Sterndeutung* (ed. 3, revised by W. Gundel). Leipzig: B. G. Teubner, 1926. F. Cumont, *Astrology and Religion among the Greeks and Romans*. New York: Putnam, 1912.

<sup>2</sup> *Studien*, pp. 111-181.

## INTRODUCTION

printed only three times, and not at all since the sixteenth century. The editions are as follows :

(1) The first edition, edited by Joachim Camerarius, was printed by Froben at Nürnberg in 1535 in quarto. Besides the text, it contains Camerarius' Latin translation of Bks. I-II and of parts of Bks. III-IV, and his notes on Bks. I-II, the Greek text of the *Καρπός*, and a Latin translation by J. Pontanus.

(2) The second edition, also by Camerarius, was printed by Joannes Oporinus in octavo at Basel in 1553.<sup>1</sup> This contains the Greek text of the *Tetra-biblos*, a Latin translation by Philip Melanchthon, and the *Καρπός* in both Greek and Latin. In the preparation of the first edition Camerarius had relied upon the Nürnberg codex (N in the list on p. xvii), in which his marks to guide the printer are still to be seen. He claims for his second edition to have corrected many mistakes in the text, and he has indeed managed to do away with many errors and misprints which are to be found in the first edition ; but apparently, too, he made use of one or more additional MSS., probably of the general type of A in our list below, from which he introduced nearly a hundred readings at variance with N, and

<sup>1</sup> *Κλαυδίου Πτολεμαίου Πηλουσιέως τετράβιβλος σύνταξις πρὸς Σύρον ἀδελφόν. Τοῦ αὐτοῦ Καρπός, πρὸς τὸν αὐτὸν Σύρον. Claudii Ptolemaei Pelusiensis libri quatuor, compositi Syro fratri. Eiusdem Fructus librorum suorum, sive Centum dicta, ad eundem Syrum. Innumeris quibus hucusque scatebant mendis, purgati.* Basileae, per Ioannem Oporinum. This is the title page of the Greek text. The portion containing the translations has a separate title page.

## PTOLEMY

in some seventy-five other instances he altered the text by outright emendation. In spite of the attempted improvement the second edition retains some forty misprints or mistakes, half of them newly introduced; its punctuation is most illogical, and it is far from reproducing what seems to be the best tradition of the manuscripts.

(3) Fr. Junctinus included the Greek text of the *Tetrabiblos* in his *Speculum astrologiae*, the second edition of which, in two folio volumes, was issued at Leyden in 1581. Junctinus made no attempt to improve the text as already published.

Professor Franz Boll, whose studies of Ptolemy have been cited many times already, had begun work upon a new edition of the *Tetrabiblos* prior to his lamented death, July 3, 1924. His pupil, Fräulein Emilie Boer, however, continued Boll's task, and the appearance of their completed text has been awaited since 1926.<sup>1</sup> I regret very much that my own work on the present text and translation could not have profited from the results of the textual studies of these two scholars.

Translations of the *Tetrabiblos* have been more numerous than texts. The oldest of them is the Arabian version, by Ishaq ben Hunein, made in the ninth century. Thence in turn Plato Tiburtinus, in 1138, and Aegidius de Thebaldis, in the middle of the thirteenth century, made Latin translations,

<sup>1</sup> I am told that the work was completed in this year. It has been announced as Vol. III, Fasc. 1, of *Ptolemaei opera omnia* in the well-known *Bibliotheca Classica*, published by B. G. Teubner, Leipzig. The year of publication is unknown to the writer as this is written.

## INTRODUCTION

which were the chief means whereby Western Europe knew the *Tetrabiblos* up to the time of the first edition of the Greek text. Printed editions of these translations—the first dated 1484—appeared,<sup>1</sup> and they were also circulated in manuscript form. More important are the Latin translations made directly from the Greek, beginning with that of Camerarius himself, which was printed both with his text, as noted above, and by itself.<sup>2</sup> The translation by Antonius Gogava, first issued at Louvain in 1543, was several times reprinted at other places, for instance, at Padua in 1658, and was the version used by Cardanus to accompany his commentary. Philip Melanchthon's translation made its appearance in 1553, as we have seen; this, too, was issued separately later.<sup>3</sup> An English translation by John Whalley was published in 1701 and in a second edition in 1786,<sup>4</sup> which, as Ashmand says, "was not, in any one instance, purified from the blunders and obscurities which disgraced its predecessor." In

<sup>1</sup> On the early Latin versions see Thorndike, *History of Magic and Experimental Science* (New York, 1923), I, p. 110. MSS. of the Arabic version exist at the Escorial and in the Laurentian Library at Florence.

<sup>2</sup> Printed by Joannes Petreius, Nürnberg, 1535, with Camerarius' notes.

<sup>3</sup> *E.g.* a rudely printed duodecimo from the press of the heirs of Petrus Thomasius, Perugia, 1646, is in the writer's own library.

<sup>4</sup> *The Quadripartite; or, Four Books Concerning the Influences of the Stars . . . by Claudius Ptolemy. . . .* By John Whalley, Professor of Physic and Astrology, and Others. The Second Edition, Revised, Corrected, and Improved. London: Printed for the Editors, and sold by M. Sibley . . . and E. Sibley . . . 1786.

## PTOLEMY

truth, Ptolemy is not easy to translate accurately, and though Whalley's version is worse than the others, all show a certain willingness to disguise the difficulties with smooth-sounding but non-committal phrases.<sup>1</sup>

The importance and popularity of the *Tetrabiblos* is shown by the number of commentaries upon it which have been made. In antiquity, as we deduce from expressions used in writings still extant, a considerable number existed;<sup>2</sup> the name of one commentator, Pancharios, survives, but none of his work except a few quotations.<sup>3</sup> Three such treatises which did survive, however, were edited by Hieronymus Wolf and published with Latin translations in folio at Basel in 1559. These are (1) an anonymous commentary on the *Tetrabiblos*, attributed by some, as Wolf says, to Proclus; (2) an introduction to the *Tetrabiblos*, to which the name of Porphyry is attached, though its authorship is by no means certain; (3) the scholia of Demophilus. These have not been republished, but are to be found in a number of manuscripts. Of greater importance for the study of the *Tetrabiblos* is the *Paraphrase* attributed to Proclus, but which, of course, may not have been his at all. Since it follows the *Tetrabiblos* very

<sup>1</sup> German translations also exist; e.g. by J. W. Pfaff in his *Astrologisches Taschenbuch*, 1822-23 (mentioned by Christ, *Gr. Litteraturgeschichte*), and one by M. E. Winkel, Linseverlag, 1923, which is based on the Latin of Melancthon (v. W. Gundel in *Jahresb. ü. die Fortschritte d. Kl. Alt.* 241, 1934, p. 74).

<sup>2</sup> Boll, *Studien*, p. 127.

<sup>3</sup> E.g. ap. *CCAG*, viii. 2, p. 67, 18 ff.; cf. Kroll, *Philologus*, lvii (1897), p. 123.

## INTRODUCTION

closely, and since, as it happens, one manuscript of the *Paraphrase* is older than any of those of the *Tetrabiblos*, this document must be taken into consideration by any editor of the latter work. The first and only edition of the *Paraphrase*, with a preface by Melanchthon, appeared at Basel in 1554,<sup>1</sup> and the standard Latin version, from which at least two English translations have been made,<sup>2</sup> is that of Leo Allatius (Elzevir, Leyden, 1635). Besides the *Paraphrase* and the ancient commentaries, the elaborate commentary by Hieronymus Cardanus, published in the sixteenth century, should also be mentioned.<sup>3</sup>

### IV.

There are in European libraries at least thirty-five manuscripts containing all or a large part of the *Tetrabiblos*, besides a considerable number which contain partial texts or astrological miscellanies in which Ptolemy is cited along with other writers. Parts of the *Tetrabiblos*, too, are quoted by other

<sup>1</sup> Πρόκλου τοῦ διαδόχου τῶν ἀσαφῶς εἰρημένων Πτολεμαίων, καὶ δυσπαρακολούθητως ἐν τῷ αὐτοῦ τετραβίβλω, ἐπὶ τὸ σαφέστερον καὶ δυσπαρακολούθητον [sic] μεταχείρησις. *Procli paraphrasis in quatuor Ptolemaei libros de Siderum effectionibus. Cum praefatione Philippi Melanthonis.* Basileae, apud Joannem Oporinum [1554].

<sup>2</sup> J. M. Ashmand, *Ptolemy's Tetrabiblos or Quadripartite*, etc. London: Davis and Diekson, 1822. James Wilson, *The Tetrabiblos or Quadripartite of Ptolemy*, etc. London: W. Hughes (1828). Charpulier, *Les Discourses, etc.*, 156, n. 2, cites a Ptolemy's *Tetrabiblos*, by J. M. Ashmand, London, 1917.

<sup>3</sup> Editions were published at Basel in 1554 and 1579, at Leyden in 1555, and in the fifth volume of Cardanus' works (Leyden: Huguetan and Revaud, 1663).

## PTOLEMY

authors, like Hephaestion of Thebes. Finally, there are a few manuscripts with Latin or Arabic translations. In spite of this volume of material, however, the earliest text of the *Tetrabiblos* itself is only of the thirteenth century. There is but one full manuscript even of this degree of antiquity, and only two or three from the fourteenth century; most of them are from the fifteenth and sixteenth. In view of this fact it is fortunate that we have one (but only one) manuscript of the *Paraphrase* which antedates all of these, having been written in the tenth century.

In preparing the present text of the *Tetrabiblos* I have been obliged to work entirely with photographs and photostats. However, by a fortunate circumstance, I was able to secure a collection of these which had been brought together by a German scholar unknown to me and which apparently includes the most important manuscripts.<sup>1</sup> Those manuscripts, therefore, which have been collated and used, and the symbols which I have used to refer to them, are as follows: <sup>2</sup>

V : Vaticanus gr. 1038, S. XIII. Contains a number of the works of Euclid, Hypsicles, and Hero, and an almost complete collection of the writings of Ptolemy, with the *Tetrabiblos* on ff. 352-384v.; the ending, after p. 207, 19 (Cam.<sup>2</sup>), does not appear. Heiberg (*Deutsche Literaturzeitung*, 1900, p. 417)

<sup>1</sup>The purchase of this collection was made possible by the Faculty Research Fund of the University of Michigan. It was accompanied by an anonymous description of the MSS. of the *Tetrabiblos*, to which I am indebted for information about many MSS. which I could not personally inspect.

<sup>2</sup>Of F and H only a few sample pages have been available.

## INTRODUCTION

believes that it was largely copied from Vat. gr. 1594, S. IX, which contains other Ptolemaic texts in a relatively pure form but does not, now at least, include the *Tetrabiblos*. A distinctive feature of this manuscript is the large number of small lacunæ left by the scribe when he could not read his archetype or found it defective. In this Boll sees an indication of faithfulness and reliability. Cf. F. Boll, "Zur Ueberlieferungsgeschichte der griechischen Astrologie und Astronomie," *Sitzungsberichte d. K. B. Akad. d. Wiss. zu München, phil.-hist. Cl.*, 1899, pp. 77 ff.; *CCAG*, v. 1, no. 9.

D: Parisinus gr. 2509, S. XV. Contains the *Tetrabiblos* on ff. 14-81v., followed by the *Καρπός*. Cf. Omont, *Inv.* ii. 274; *CCAG*, viii. 3, no. 82. A copy of V, but the lacunæ were filled in from another source.

P: Parisinus gr. 2425, S. XV. Contains the *Tetrabiblos* on ff. 8-63v. The most immediately striking feature of this manuscript is its constant mis-spelling of words due to the confusion of *αι* and *ε*, *ει*, *η*, and *ι*, *ο* and *ω*, for example: that is, the confusions typical of late Greek. They may indicate that the manuscript (or an ancestor) was copied from dictation. P also has an ending which differs from the final sentences of the Camerarius editions and most other manuscripts.

L: Oxon. Laud, gr. 50, S. XVI. A copy of P, of no independent value. Paris. Suppl. gr. 597 is another copy of P.

N: Norimbergensis Cent. V, app. 8, S. XVI. This is the basis of Camerarius' text. It contains the *Tetrabiblos* (to p. 187, 6 Cam. only) on ff. 1-59v. Cf. *CCAG*, vii. no. 42.

## PTOLEMY

A : Vaticanus gr. 208, S. XIV *exeuntis*. This manuscript uses the term *συμπερασματικά* in the title instead of *ἀποτελεσματικά*. F and H below are related to A. Mercati and De' Cavalieri, *Codices Vaticani graeci*, i (Rome, 1923); *CCAG*, v. 1, no. 6.

E : Monacensis gr. 419, S. XIV. In this manuscript book and chapter headings are missing, and the ending is omitted (from p. 212, 7 Cam.). It is closely related to M (below), but in the latter the missing parts have been supplied in a second hand.

F : Venetus Marc. 323, S. XV. Contains the *Tetrabiblos* on ff. 403-461. Zanetti, *Bibliotheca*, p. 146; Morelli, *Bibliotheca*, p. 195; *CCAG*, ii. no. 4.

G : Vindobonensis philos. gr. 115, S. XIII. Contains a portion of Book II of the *Tetrabiblos* in ff. 7-16v. Cf. Boll, *Sitzungsb. Münch. Ak.* 1899, i. p. 84.

H : Venetus Marc. 324, S. XIV-XV. The *Tetrabiblos* is on ff. 156r.-189v. Zanetti, p. 149; Morelli, p. 207; *CCAG*, ii. no. 5.

M : Venetus Marc. 314, S. XIV *ineuntis*. Contains the *Tetrabiblos* on ff. 1-76v. See on E, above. Zanetti, p. 146; Morelli, p. 195; *CCAG*, ii. no. 3.

Besides the manuscripts of the *Tetrabiblos* itself the oldest manuscript of the *Paraphrase* has been utilized: Vaticanus gr. 1453, S. X, containing this text on ff. 1-219. This is cited as Proc. Camerarius' two editions of the *Tetrabiblos* are cited respectively as Cam.<sup>1</sup> and Cam.<sup>2</sup>, or simply Cam., if they agree.

A puzzling problem connected with the manuscripts of the *Tetrabiblos* concerns their ending. In one group the conclusion is entirely missing, and has

## INTRODUCTION

either been left so<sup>1</sup> or an ending supplied which is identical with that of Proclus' *Paraphrase*;<sup>2</sup> in the other an ending appears which is considerably longer than the former, but which is precisely the same in its general content, and is to be found in the Arabic version of the *Tetrabiblos*.<sup>3</sup> One thing is certain: the first of these endings is spurious. Of course it does not follow that the other is genuine; if it is not, however, the original ending of the book must have been lost so early that it is missing in all the manuscripts. This is a situation that not infrequently occurred in ancient times, especially when a book was from the first existent in the form of a codex, not a roll; yet I am not ready to concede it in this instance, for these reasons: (a) the ending shown in P could readily, from its language, have

<sup>1</sup> V breaks off at p. 207, 19 Cam.<sup>2</sup>, E at p. 212, 7 (the beginning of the concluding passage). N also in its present state lacks the conclusion (from p. 187, 6 Cam.<sup>2</sup>), but this may have been lost at the time the first edition was made, and since Camerarius probably made some use of at least one other MS. we cannot be sure whether N originally had the conclusion or, if so, if it was of the type which Camerarius actually printed (*i.e.* the one taken from the *Paraphrase*). N in general resembles P and one would have expected it to have the same conclusion as P. On the other hand, if it did, one would have expected Camerarius to reproduce it, for it is unlikely that he would have departed from his preferred MS. in so important a particular.

<sup>2</sup> MAD. D, after the point at which V ends, is written in a different ink; the conclusion of M (p. 212, 7 ff. Cam.<sup>2</sup>) is in a different hand.

<sup>3</sup> P and its copies alone have this ending. My colleague, Professor William H. Worrell, has examined the conclusion of the Arabic version as it appears in Cod. Laur. Orient. 352, ff. 234v.-235r. It is close to, but perhaps not identical with, the ending of P.

## PTOLEMY

been written by Ptolemy himself; <sup>1</sup> (b) the ending taken from the *Paraphrase* is obviously a summary of that found in P, and I cannot conceive how anyone (except perhaps Ptolemy) could have reversed the process and evolved the tortuous, crabbed Greek of the latter from the comparatively simple language of the former. Thus the ending found in P has the better claim to originality, and if it was not written by Ptolemy in the first place it is extremely difficult to explain how it came to be written at all in the form in which we find it. Since the question, however, is admittedly complicated, and not all the extant manuscripts could be studied in preparing this edition, both endings have been included in the text and translation.

In constructing the text which follows, my underlying purpose has been to abide by the best manuscript tradition; very few emendations have been

<sup>1</sup> It echoes many words and thoughts found in p. 106, 25-108, 10 Cam.<sup>2</sup>, which need not be separately enumerated; not, however, in a manner which would indicate that it is a forgery based on the passage, for Ptolemy elsewhere repeats phrases in much the same way, especially when he wishes to point out that he is carrying out a pre-determined scheme. Note, however, in addition, that *ἀρμόζω* and *ἐφαρμόζω* are favourite words of Ptolemy, and *cf.*, for example, pp. 17. 1-2, 117. 6, 120. 9 Cam.<sup>2</sup> and p. 1. 21 (with Boll, *Studien*, p. 171); *cf.* with *διοδενομένου* the similar forms of *ἐφοδεύω* and *ἐφοδικῶς*, pp. 103. 13, 18; 106. 26; 202. 16 Cam.<sup>2</sup>; and Boll, *op. cit.*, p. 179; and with *διὰ τὴν . . . πρόθεσιν*, *cf.* p. 202. 18, *ὡσπερ ἐν ἀρχῇ προεθέμεθα*. In fact practically every word of the passage except the doubtful *χρηματείας* is to be paralleled in the *Tetrabiblos*, usually many times; to arrange them in so exact an approximation to Ptolemy's usual style would demand a forger of superhuman ingenuity.

## INTRODUCTION

attempted, and I think no great amount of emendation is necessary. My collations have been made against Camerarius' second edition, because thus far this has been the standard text and it was most convenient; I have not, however, allowed Camerarius' choice of readings to influence me unduly, for his text, in the first place, was not based upon the oldest and best manuscripts and it is, besides, full of his emendations. It was quite evident that this edition of the *Tetrabiblos* should be built up anew, independently of Camerarius' work. Without making the exhaustive studies of the relationships of the manuscripts which should eventually be carried out, I have proceeded on the assumption that V and P best preserve the original text, representing somewhat different strains. With V and its copy D, the oldest text of Proclus' *Paraphrase* is evidently in close alliance, and among the *Tetrabiblos* manuscripts MAEFHG are inclined in general to follow the lead of V, ME and AFH being related between themselves, as has already been stated. N apparently belongs rather to the P family, if there is such, but it is far from presenting a pure text; its peculiarities are, in my opinion, the result of attempts to edit or improve. The later manuscripts, however, all show aberration to a greater or less extent, and VPLD Proc. are frequently to be found arrayed against MNAE (I leave FGH out of consideration because only a few pages of each of them have come into the reckoning). In such cases I have seldom hesitated to follow VPLD, and in general, too, I agree with Boll that V is the best single guide that we have.

I am conscious that in many passages this

## PTOLEMY

translation falls short of the intended goal, a version which, in spite of the technical, unfamiliar subject, could readily be understood by itself or at least with the help of a few notes. Ptolemy, however, was a difficult author even for the ancients; the existence of the *Paraphrase* and the frequent floundering of the anonymous commentator testify to this. He displays a certain enthusiasm for his subject, but beyond this it would be impossible to commend his literary style or even the clearness of his exposition. He is fond of long, involved sentences and has a number of mannerisms, among them a fondness for the infinitive with the article and an almost Teutonic habit of piling up long strings of modifiers between article and substantive, which often results in sequences of two or even three articles. It would, under the circumstances, be almost impossible to make him crystal clear, but I trust there are not too many Heraclitean passages.

Annotation of the *Tetrabiblos* could be carried to great lengths by collecting comparable passages from other astrological writers. The comments attached to this translation, however, are intended only to help the reader over difficulties and have been kept at minimum length.

Many friends have assisted, in one way or another, with this work. Some I cannot thank as I would like to do; but I must express appreciation to Professor W. Carl Rufus for criticizing the astronomy of my translation; to Dr. William Warner Bishop, Librarian of the University of Michigan, for procuring much-needed books and the photostatic reproductions of the manuscripts; and to Franz Cumont for ever helpful interest and suggestions.

THE QUADRIPARTITE MATHEMATICAL  
TREATISE, OR "TETRABIBLOS," OF  
CLAUDIUS PTOLEMY.

BOOK I.

1. *Introduction.*

OF the means of prediction through astronomy, O Syrus, two are the most important and valid. One, which is first<sup>1</sup> both in order and in effectiveness, is that whereby we apprehend the aspects of the movements of sun, moon, and stars in relation to each other and to the earth, as they occur from time to time; the second is that in which by means of the natural character of these aspects themselves we investigate the changes which they bring about in that which they surround. The first of these, which has its own science, desirable in itself even though it does not attain the result given by its combination with the second, has been expounded to you as best we could in its own treatise<sup>2</sup> by the method of demonstration. We shall now give an account of the second and less self-sufficient method in a properly philosophical way, so that one whose aim is the truth might never compare its perceptions with the sureness of the first, unvarying science, for he ascribes to it the weakness and unpredictability

<sup>1</sup> Astronomy proper.

<sup>2</sup> The *Almagest*.

<sup>1</sup> Ptolemy is contrasting, after the manner of Aristotle, the unchangeability of the heavenly bodies and their regular motions, which can be known and predicted by astronomy, with the constant and unpredictable changes of material objects in the sublunary region.

<sup>2</sup> On the arguments against astrology, see Bouché-Leclercq, pp. 570 ff. The Academic school, led by

## TETRABIBLOS I. 1-2

of material qualities found in individual things,<sup>1</sup> nor yet refrain from such investigation as is within the bounds of possibility, when it is so evident that most events of a general nature draw their causes from the enveloping heavens. But since everything that is hard to attain is easily assailed<sup>2</sup> by the generality of men, and in the case of the two before-mentioned disciplines the allegations against the first could be made only by the blind, while there are specious grounds for those levelled at the second—for its difficulty in parts has made them think it completely incomprehensible, or the difficulty of escaping what is known<sup>3</sup> has disparaged even its object as useless—we shall try to examine briefly the measure of both the possibility and the usefulness of such prognostication before offering detailed instruction on the subject. First as to its possibility.

### *2. That Knowledge by Astronomical Means is Attainable, and How Far.*

A very few considerations would make it apparent to all that a certain power emanating from the eternal ethereal substance<sup>4</sup> is dispersed through and

Carneades, initiated the most serious attack against it in antiquity. The answers given by Ptolemy in the two chapters following are, as Boll (*Studien*, pp. 131 ff.) shows, largely derived from the Stoic Posidonius, who defended divination.

<sup>3</sup> Proclus paraphrases, "the difficulty of retaining in the memory what has been learned," but the reference is clearly to the subject discussed in i. 3.

<sup>4</sup> The ether, or fifth element, contrasted with the usual four; this is an Aristotelian (Peripatetic) doctrine.

ἐπὶ πᾶσαν τὴν περιγείαν καὶ δι' ὄλων μεταβλητὴν, τῶν ὑπὸ τὴν σελήνην πρώτων στοιχείων πυρὸς καὶ αἰέρος περιεχομένων μὲν καὶ τρεπομένων ὑπὸ τῶν κατὰ τὸν αἰθέρα κινήσεων, περιεχόντων δὲ καὶ συντρεπόντων τὰ λοιπὰ πάντα, γῆν καὶ ὕδωρ καὶ τὰ ἐν αὐτοῖς φυτὰ καὶ ζῶα, πᾶσιν ἂν ἐναργέστατον<sup>1</sup> καὶ δι' ὀλίγων φανείη. ὁ τε γὰρ ἥλιος διατίθησιν ὡς αἰεὶ μετὰ τοῦ περιέχοντος πάντα τὰ περὶ τὴν γῆν οὐ μόνον διὰ τῶν κατὰ τὰς ἐτησίους ὥρας μεταβολῶν πρὸς γονὰς ζώων καὶ φυτῶν καρποφορίας καὶ ρύσεις ὑδάτων καὶ σωμάτων μετατροπὰς ἀλλὰ καὶ διὰ τῶν καθ' ἑκάστην ἡμέραν περιόδων, θερμαίνων τε καὶ ὑγραίνων καὶ ξηραίνων καὶ ψύχων τεταγμένως τε καὶ ἀκολουθῶς τοῖς πρὸς τὸν κατὰ κορυφὴν ἡμῶν γινομένοις ὁμοιοτρόποις σχηματισμοῖς ἢ τε σελήνη πλείστην,<sup>2</sup> ὡς περιγειοτάτη, διαδίδωσιν ἐπὶ τὴν γῆν<sup>3</sup> τὴν ἀπόρροϊαν, συμπαθούτων αὐτῇ καὶ συντρεπομένων τῶν πλείστων καὶ ἀψύχων καὶ ἐμφύχων, καὶ ποταμῶν μὲν συναυξόντων καὶ συμμειούντων τοῖς φώσιν αὐτῆς τὰ ρεύματα, θαλαττῶν δὲ συντρεπουσῶν ταῖς ἀνατολαῖς καὶ ταῖς δύσεσι τὰς ἰδίας ὀρμάς, φυτῶν δὲ καὶ ζώων ἢ ὄλων ἢ κατὰ τινα μέρη συμπληρουμένων τε αὐτῇ καὶ συμμειουμένων. αἱ τε τῶν ἀστέρων τῶν τε ἀπλανῶν καὶ τῶν πλανωμένων πάροδοι πλείστας ποιούσιν ἐπισημασίας τοῦ περιέχοντος καυματώδεις καὶ πνευματώδεις<sup>4</sup> καὶ νιφετώδεις, ὑφ' ὧν καὶ τὰ ἐπὶ τῆς

## TETRABIBLOS I. 2

permeates the whole region about the earth, which throughout is subject to change, since, of the primary sublunar elements, fire and air are encompassed and changed by the motions in the ether, and in turn encompass and change all else, earth and water and the plants and animals therein. For the sun,<sup>1</sup> together with the ambient, is always in some way affecting everything on the earth, not only by the changes that accompany the seasons of the year to bring about the generation of animals, the productiveness of plants, the flowing of waters, and the changes of bodies, but also by its daily revolutions furnishing heat, moisture, dryness, and cold in regular order and in correspondence with its positions relative to the zenith. The moon, too, as the heavenly body nearest the earth, bestows her effluence<sup>2</sup> most abundantly upon mundane things, for most of them, animate or inanimate, are sympathetic to her and change in company with her; the rivers increase and diminish their streams with her light, the seas turn their own tides with her rising and setting, and plants and animals in whole or in some part wax and wane with her. Moreover, the passages of the fixed stars and the planets through the sky often signify hot, windy, and snowy conditions of the air, and mundane

<sup>1</sup> Boll, *Studien*, pp. 133 ff., enumerates parallels to this passage concerning the sun and the moon in Cicero, Philo Judaeus, Cleomedes, and Manilius, and ascribes their likeness to the influence of Posidonius.

<sup>2</sup> This word, ἀπόρροια, has another meaning, "separation," as a technical term of astrology; see c. 24 below and my note on P. Mich. 149, col. iii, 33.

<sup>1</sup> Positions relative to one another in the heavens. For the names of the aspects recognized by Ptolemy cf. the note on i. 13 (pp. 72-73).

## TETRABIBLOS I. 2

things are affected accordingly. Then, too, their aspects<sup>1</sup> to one another, by the meeting and mingling of their dispensations, bring about many complicated changes. For though the sun's power prevails in the general ordering of quality, the other heavenly bodies aid or oppose it in particular details, the moon more obviously and continuously, as for example when it is new, at quarter, or full, and the stars at greater intervals and more obscurely, as in their appearances, occultations, and approaches.<sup>2</sup> If these matters be so regarded, all would judge it to follow that not only must things already compounded be affected in some way by the motion of these heavenly bodies, but likewise the germination and fruition of the seed must be moulded and conformed to the quality proper to the heavens at the time. The more observant farmers and herdsmen,<sup>3</sup> indeed, conjecture, from the winds prevailing at the time of impregnation and of the sowing of the seed, the quality of what will result; and in general we see that the more important consequences signified by the more obvious configurations of sun, moon, and stars are usually known beforehand, even by those who inquire, not by scientific means, but only by observation. Those which are consequent upon greater forces and simpler natural orders, such as

<sup>2</sup> By "stars" (ἀστέρων) in this passage Ptolemy means primarily the planets rather than the fixed stars. Their "appearances" and "occultations" are their heliacal risings and settings (cf. Bouché-Leclercq, p. 111, n. 3). *πρόσρευσις* is used to mean both "inclination" and, as here, the "approach" of one heavenly body to another.

<sup>3</sup> Cicero, *de divinatione*, i. 112: *Multa medici, multa gubernatores, agricolae etiam multa praesentiant.*

## TETRABIBLOS I. 2

the annual variations of the seasons and the winds, are comprehended by very ignorant men, nay even by some dumb animals; for the sun is in general responsible for these phenomena. Things that are not of so general a nature, however, are comprehended by those who have by necessity become used to making observations, as, for instance, sailors know the special signs of storms and winds that arise periodically by reason of the aspects of the moon and fixed stars to the sun. Yet because they cannot in their ignorance accurately know the times and places of these phenomena, nor the periodic movements of the planets, which contribute importantly to the effect, it happens that they often err. If, then, a man knows accurately the movements of all the stars, the sun, and the moon, so that neither the place nor the time of any of their configurations escapes his notice, and if he has distinguished in general their natures as the result of previous continued study, even though he may discern, not their essential, but only their potentially effective qualities, such as the sun's heating and the moon's moistening, and so on with the rest; and if he is capable of determining in view of all these data, both scientifically and by successful conjecture, the distinctive mark of quality resulting from the combination of all the factors, what is to prevent him from being able to tell on each given occasion the characteristics of the air from the rela-

τῆς τότε τῶν φαινομένων σχέσεως τὰς τοῦ περιέχοντος ἰδιοτροπίας εἰπεῖν, οἷον ὅτι θερμότερον ἢ ὑγρότερον ἔσται, δύνασθαι δὲ καὶ καθ' ἓνα ἕκαστον τῶν ἀνθρώπων τὴν τε καθ' ὅλου ποιότητα τῆς ἰδιοσυγκρασίας ἀπὸ τοῦ κατὰ τὴν σύστασιν περιέχοντος συνιδεῖν, οἷον ὅτι τὸ μὲν σῶμα τοιόσδε, τὴν δὲ ψυχὴν τοιόσδε, καὶ τὰ κατὰ καιροὺς συμπτώματα διὰ τοῦ τὸ μὲν τοιόνδε περιέχον τῇ τοιαύτῃ συγκράσει σύμμετρον ἢ καὶ πρόσφορον γίνεσθαι πρὸς εὐεξίαν, τὸ δὲ τοιόνδε ἀσύμμετρον καὶ πρόσφορον πρὸς κάκωσιν; ἀλλὰ γὰρ τὸ μὲν δυνατὸν τῆς τοιαύτης καταλήψεως διὰ τούτων καὶ τῶν ὁμοίων ἔστι συνιδεῖν.

Ὅτι δὲ εὐπροφασίστως μὲν, οὐ προσηκόντως δέ, τὴν πρὸς τὸ ἀδύνατον ἔσχε διαβολὴν οὕτως ἂν κατανοήσαιμεν. πρῶτον μὲν γὰρ τὰ πταίσματα τῶν μὴ ἀκριβούντων τὸ ἔργον, πολλὰ ὄντα, ὡς ἐν μεγάλῃ καὶ πολυμερεῖ θεωρία, καὶ τοῖς ἀληθευμένοις τὴν τούτου ἐκ τύχης παρέσχε δόξαν, οὐκ ὀρθῶς. τὸ γὰρ τοιοῦτον οὐ τῆς ἐπιστήμης, ἀλλὰ τῶν μεταχειριζομένων ἐστὶν ἀδυναμία· ἔπειτα καὶ οἱ πλείστοι τοῦ πορίζειν ἕνεκεν ἑτέραν τέχνην τῇ ταύτης ὀνόματι καταξιοπιστευόμενοι<sup>1</sup> τοὺς μὲν ἰδιώτας ἐξαπατῶσι, πολλὰ προλέγειν δοκοῦντες καὶ τῶν μηδεμίαν φύσιν ἐχόντων προγινώσκεισθαι, τοῖς

<sup>1</sup> καταξιοπιστευόμενοι VPMAD E; διὰ τὴν ἀξιοπιστίαν Procl.; καὶ ἀξία προστησάμενοι καὶ πιστευόμενοι NCam.

<sup>1</sup> The first part of the pseudo-Lucianic *Περὶ ἀστρολογίας* closely parallels this passage, as Boll, *Studien*, pp. 151-153, shows.

tions of the phenomena at the time, for instance, that it will be warmer or wetter? Why can he not, too, with respect to an individual man, perceive the general quality of his temperament from the ambient at the time of his birth, as for instance that he is such and such in body and such and such in soul, and predict occasional events, by use of the fact that such and such an ambient is attuned to such and such a temperament and is favourable to prosperity, while another is not so attuned and conduces to injury? Enough, however; for the possibility of such knowledge can be understood from these and similar arguments.

The following considerations might lead us to observe that criticism of the science on the score of impossibility has been specious but undeserved. In the first place, the mistakes<sup>1</sup> of those who are not accurately instructed in its practice, and they are many, as one would expect in an important and many-sided art, have brought about the belief that even its true predictions depend upon chance, which is incorrect. For a thing like this is an impotence, not of the science, but of those who practise it. Secondly, most, for the sake of gain, claim credence for another art in the name of this,<sup>2</sup> and deceive the vulgar, because they are reputed to foretell many things, even those that cannot naturally be known

<sup>2</sup> Cardanus (p. 104) gives a number of examples, among them the *geomantici*, those who make elaborate predictions from the mere fact that a man was born on a certain day of the week, of the moon, or of the month, those who predict by reckoning the numerical equivalents of the letters in a man's name (arithmologists), and so on. Cf. also Plato's remarks about unworthy pretenders to philosophy, *Republic*, 495C ff.

<sup>1</sup> On rascals in philosophy cf. Plato, *Republic* 487D, and the discussion which follows.

<sup>2</sup> By various ancient authors it was claimed that the Chaldaean observations extended over periods of from 470,000 to 720,000 years ; Boll-Bezold-Gundel, pp. 25. 99.

## TETRABIBLOS I. 2

beforehand, while to the more thoughtful they have thereby given occasion to pass equally unfavourable judgement upon the natural subjects of prophecy. Nor is this deservedly done; it is the same with philosophy—we need not abolish it because there are evident rascals among those that pretend to it.<sup>1</sup> Nevertheless it is clear that even though one approach astrology in the most inquiring and legitimate spirit possible, he may frequently err, not for any of the reasons stated, but because of the very nature of the thing and his own weakness in comparison with the magnitude of his profession. For in general, besides the fact that every science that deals with the quality of its subject-matter is conjectural and not to be absolutely affirmed, particularly one which is composed of many unlike elements, it is furthermore true that the ancient configurations of the planets,<sup>2</sup> upon the basis of which we attach to similar aspects of our own day the effects observed by the ancients in theirs, can be more or less similar to the modern aspects, and that, too, at long intervals, but not identical, since the exact return of all the heavenly bodies and the earth to the same positions,<sup>3</sup> unless one

<sup>3</sup> “The Stoics say that the planets, returning to the same point of longitude and latitude which each occupied when first the universe arose, at fixed periods of time bring about a conflagration and destruction of things, and that the universe again reverts anew to the same condition, and that as the stars again move in the same way everything that took place in the former period is exactly reproduced. Socrates, they say, and Plato will again exist, and every single man, with the same friends and countrymen; the same things will happen to them, they will meet with the same fortune, and deal with the same things,” etc. (Nemesius, *De natura hominis*, 38, p. 309, Matthaei).

holds vain opinions of his ability to comprehend and know the incomprehensible, either takes place not at all or at least not in the period of time that falls within the experience of man; so that for this reason predictions sometimes fail, because of the disparity of the examples on which they are based. As to the investigation of atmospheric phenomena, this would be the only difficulty, since no other cause besides the movement of the heavenly bodies is taken into consideration. But in an inquiry concerning nativities and individual temperaments in general, one can see that there are circumstances of no small importance and of no trifling character, which join to cause the special qualities of those who are born. For differences of seed exert a very great influence on the special traits of the genus, since, if the ambient and the horizon are the same, each seed prevails to express in general its own form, for example, man, horse, and so forth; and the places of birth bring about no small variation in what is produced. For if the seed is generically the same, human for example, and the condition of the ambient the same, those who are born differ much, both in body and soul, with the difference of countries.<sup>1</sup> In addition to this, all the aforesaid conditions being equal, rearing and customs contribute to influence the particular way in which a

<sup>1</sup> The first three chapters of Book ii deal with astrological ethnology, and in iv. 10 Ptolemy points out that in all nativities such general considerations as nationality and age take precedence over more particular details.

## TETRABIBLOS I. 2

life is lived. Unless each one of these things is examined together with the causes that are derived from the ambient, although this latter be conceded to exercise the greatest influence (for the ambient is one of the causes for these things being what they are, while they in turn have no influence upon it), they can cause much difficulty for those who believe that in such cases everything can be understood, even things not wholly within its jurisdiction, from the motion of the heavenly bodies alone.

Since this is the case, it would not be fitting to dismiss all prognostication of this character because it can sometimes be mistaken, for we do not discredit the art of the pilot for its many errors; but as when the claims are great, so also when they are divine, we should welcome what is possible and think it enough. Nor, further, should we gropingly and in human fashion demand everything of the art, but rather join in the appreciation of its beauty, even in instances wherein it could not provide the full answer; and as we do not find fault with the physicians, when they examine a person, for speaking both about the sickness itself and about the patient's idiosyncrasy, so too in this case we should not object to astrologers using as a basis for calculation nationality, country, and rearing, or any other already existing accidental qualities.

### 3. *That it is also Beneficial.*

In somewhat summary fashion it has been shown how prognostication by astronomical means is possible, and that it can go no further than what happens in the ambient and the consequences to man from such causes—that is, it concerns the original endowments of faculties and activities of soul and body, their occasional diseases, their endurance for a long or a short time, and, besides, all external circumstances that have a directive and natural connection with the original gifts of nature, such as property and marriage in the case of the body and honour and dignities in that of the soul, and finally what befalls them from time to time.<sup>1</sup> The remaining part of our project would be to inquire briefly as to its usefulness,<sup>2</sup> first distinguishing how and with what end in view we shall take the meaning of the word usefulness. For if we look to the goods of the soul, what could be more conducive to well-being, pleasure, and in general satisfaction than this kind of forecast, by which we gain full view of things human and divine? And if we look to bodily goods, such knowledge, better than anything else, would perceive what is fitting and expedient for the capabilities of each temperament. But if it does not aid in the acquisition of riches, fame, and the like, we shall be able

<sup>1</sup> Note that in this sentence Ptolemy refers to several of the subjects of chapters in Books iii and iv.

<sup>2</sup> According to Cicero, *De divinatione*, ii. 105, Dicaearchus wrote a book to prove that divination was useless; Plutarch took the other side, in an essay of which only fragments are preserved.

## PTOLEMY

τὰ τοιαῦτα συνεργεῖ, προχωρήσει καὶ περὶ πάσης φιλοσοφίας τὸ αὐτὸ τοῦτο φάσκειν· οὐδενὸς γὰρ τῶν τοιούτων ἐστίν, ὅσον ἐφ' ἑαυτῇ, περιποιητική. ἀλλ' οὔτ' ἐκείνης διὰ τοῦτ' ἂν οὔτε ταύτης καταγινώσκοιμεν δικαίως, ἀφέμενοι τοῦ πρὸς τὰ μείζω συμφέροντος.

11 Ὅλως δ' ἂν ἐξετάζουσι φανείεν ἂν οἱ τὸ ἄχρηστον τῆς καταλήψεως ἐπιμεμφόμενοι πρὸς οὐδέν τῶν κυριωτάτων ἀφορῶντες, ἀλλὰ πρὸς αὐτὸ τοῦτο μόνον, ὅτι τῶν πάντη πάντως ἐσομένων ἢ πρόγνωσις περιττή, καὶ τοῦτο δὲ ἀπλῶς πάνυ, καὶ οὐκ εὖ διειλημμένως. πρῶτον μὲν γὰρ δεῖ σκοπεῖν, ὅτι καὶ ἐπὶ τῶν ἐξ ἀνάγκης ἀποβησομένων τὸ μὲν ἀπροσδόκητον τοὺς τε θορύβους ἐκστατικούς καὶ τὰς χαρὰς ἐξοιστικὰς μάλιστα πέφυκε ποιεῖν· τὸ δὲ προγινώσκειν ἐθίζει καὶ ῥυθμίζει τὴν ψυχὴν τῇ μελέτῃ τῶν ἀπόντων ὡς παρόντων, καὶ παρασκευάζει μετ' εἰρήνης καὶ εὐσταθείας ἕκαστα τῶν ἐπερχομένων ἀποδέχεσθαι. ἔπειθ' ὅτι μηδ' οὕτως ἕκαστα χρὴ νομίζειν τοῖς ἀνθρώποις ἀπὸ τῆς ἄνωθεν αἰτίας παρακολουθεῖν, ὥσπερ ἐξ ἀρχῆς ἀπὸ τινος ἀλύτου καὶ θείου προστάγματος καθ' ἓνα ἕκαστον νενομοθετημένα καὶ ἐξ ἀνάγκης ἀποβησόμενα, μηδεμιᾶς ἄλλης ἀπλῶς αἰτίας ἀντιπράξει δυναμένης, ἀλλ' ὡς μὲν τῆς τῶν οὐρανίων κινήσεως καθ' εἰμαρμένην θείαν καὶ ἀμετάπτωτον ἐξ αἰῶνος ἀποτελουμένης, τῆς δὲ τῶν ἐπιγείων<sup>1</sup> ἀλλοιώσεως καθ' εἰμαρμένην φυσικὴν καὶ μεταπτῶτην τὰς πρώτας αἰτίας ἄνωθεν λαμβανούσης κατὰ συμβεβηκὸς καὶ κατ' ἐπακολούθησιν· καὶ ὡς τῶν μὲν διὰ καθολικότερας περιστά-

### TETRABIBLOS I. 3

to say the same of all philosophy, for it does not provide any of these things as far as its own powers are concerned. We should not, however, for that reason be justified in condemning either philosophy or this art, disregarding its greater advantages.

To a general examination it would appear that those who find fault with the uselessness of prognostication have no regard for the most important matters, but only for this—that foreknowledge of events that will happen in any case is superfluous; this, too, quite unreservedly and without due discrimination. For, in the first place, we should consider that even with events that will necessarily take place their unexpectedness is very apt to cause excessive panic and delirious joy, while foreknowledge accustoms and calms the soul by experience of distant events as though they were present, and prepares it to greet with calm and steadiness whatever comes. A second reason is that we should not believe that separate events attend mankind as the result of the heavenly cause as if they had been originally ordained for each person by some irrevocable divine command and destined to take place by necessity without the possibility of any other cause whatever interfering. Rather is it true that the movement of the heavenly bodies, to be sure, is eternally performed in accordance with divine, unchangeable destiny, while the change of earthly things is subject to a natural and mutable fate, and in drawing its first causes from above it is governed by chance and natural sequence. Moreover, some things happen to mankind through more general

<sup>1</sup> Cf. ii. 1, "the particular always falls under the general." Ptolemy distinguishes carefully between uni-

## TETRABIBLOS I. 3

circumstances and not as the result of an individual's own natural propensities—for example, when men perish in multitudes by conflagration or pestilence or cataclysms, through monstrous and inescapable changes in the ambient, for the lesser cause always yields to the greater<sup>1</sup> and stronger; other occurrences, however, accord with the individual's own natural temperament through minor and fortuitous antipathies of the ambient. For if these distinctions are thus made, it is clear that both in general and in particular whatever events depend upon a first cause, which is irresistible and more powerful than anything that opposes it, must by all means take place; on the contrary, of events that are not of this character, those which are provided with resistant forces are easily averted, while those that are not follow the primary natural causes, to be sure, but this is due to ignorance and not to the necessity of almighty power. One might observe this same thing happening in all events whatsoever that have natural causes. For even of stones, plants, and animals, and also of wounds, mishaps, and sicknesses, some are of such a nature as to act of necessity, others only if no opposing thing interferes. One should therefore believe that physical philosophers predict what is to befall men with foreknowledge of

versal (*καθολική*) and particular or genethliological (*γενεθλιαλογική*) astrology. The former deals with astrological influences which affect all mankind or whole countries and races of men, and is treated in Books i-ii; the latter concerns the nativities of individuals, and is the subject of Books iii-iv.

this character and do not approach their task under false impressions ; for certain things, because their effective causes are numerous and powerful, are inevitable, but others for the opposite reason may be averted. Similarly those physicians who can recognize ailments know beforehand those which are always fatal and those which admit of aid. In the case of events that may be modified we must give heed to the astrologer, when, for example, he says that to such and such a temperament, with such and such a character of the ambient, if the fundamental proportions increase or decrease, such and such an affection will result. Similarly we must believe the physician, when he says that this sore will spread or cause putrefaction, and the miner, for instance, that the lodestone attracts iron : just as each of these, if left to itself through ignorance of the opposing forces, will inevitably develop as its original nature compels, but neither will the sore cause spreading or putrefaction if it receives preventive treatment, nor will the lodestone attract the iron if it is rubbed with garlic ;<sup>1</sup> and these very deterrent measures also have their resisting power naturally and by fate ; so also in the other cases, if future happenings to men are not known, or if they are known and the remedies are not applied, they will by all means follow the course of primary nature ; but if they are recognized ahead of time and remedies are provided, again quite in accord

<sup>1</sup> A current belief ; cf. Thorndike, *History of Magic and Experimental Science*, I, p. 213, for an instance of its occurrence in Plutarch.

<sup>1</sup> Hesiod's *Works and Days*, 383 ff. (ed. Flach), well illustrates how such stars and constellations as the Pleiades,

## TETRABIBLOS I. 3

with nature and fate, they either do not occur at all or are rendered less severe. And in general, since such power is the same whether applied to things regarded universally or particularly, one would wonder why all believe in the efficacy of prediction in universal matters, and in its usefulness for guarding one's interests (for most people admit that they have foreknowledge of the seasons, of the significance of the constellations, and of the phases of the moon, and take great forethought for safeguarding themselves, always contriving cooling agents against summer and the means of warmth against winter, and in general preparing their own natures with moderation as a goal; furthermore, to ensure the safety of the seasons and of their sailings they watch the significance of the fixed stars, and, for the beginning of breeding and sowing, the aspects of the moon's light at its full,<sup>1</sup> and no one ever condemns such practices either as impossible or useless); but, on the other hand, as regards particular matters and those depending upon the mixture of the other qualities—such as predictions of more or less, of cold or of heat, and of the individual temperament—some people believe neither that foreknowledge is still possible nor that precautions can be taken in most instances. And yet, since it is obvious that, if we happen to have cooled ourselves against heat in general, we shall

Orion, Hyades, Sirius, and Arcturus, and the solstices were observed in ordinary rural life in such connections as those mentioned by Ptolemy; also in navigation (618 ff.). The favourable and unfavourable days of the month (*i.e.* of the moon) are enumerated in lines 769 ff.

εἰ τύχοιμεν προκαταψύξαντες ἑαυτοὺς ἦττον καυσούμεθα, δύναται τὸ ὅμοιον ἐνεργεῖν καὶ πρὸς τὰ ἰδίως τήνδε τὴν σύγκρασιν εἰς ἀμετρίαν αὖξαντα<sup>1</sup> τοῦ θερμοῦ. ἀλλὰ γὰρ αἴτιον τῆς τοιαύτης ἀμαρτίας τό τε δύσκολον καὶ ἄηθες τῆς τῶν κατὰ μέρος προγνώσεως, ὅπερ καὶ ἐπὶ τῶν ἄλλων σχεδὸν ἀπάντων ἀπιστίαν ἐμποιεῖ. καὶ τὸ μὴ συναπτομένης ὡς ἐπὶ πᾶν τῆς ἀντιπαθούσης δυνάμεως τῆ προγνωστικῆς, διὰ τὸ σπάνιον τῆς οὕτω τελείας διαθέσεως, καὶ περὶ τὰς πρώτας φύσεις ἀνεμποδίστως ἀποτελουμένης, δόξαν ὡς περὶ ἀτρέπτων καὶ ἀφυλάκτων παρέσχε καὶ πάντων ἀπλῶς τῶν ἀποβησομένων

<sup>1</sup> Ptolemy's language is highly condensed and obscure; the translation gives the probable meaning. Proclus' *Paraphrase*, pp. 31-32, thus renders the passage: "But the reason for such an assumption is the difficulty of prognostication in particular cases, the accurate and truth-

### TETRABIBLOS I. 3

suffer less from it, similar measures can prove effective against particular forces which increase this particular temperament to a disproportionate amount of heat. For the cause of this error is the difficulty and unfamiliarity of particular prognostication, a reason which in most other situations as well brings about disbelief. And since for the most part the resisting faculty is not coupled with the prognostic, because so perfect a disposition is rare, and since the force of nature takes its course without hindrance when the primary natures are concerned, an opinion has been produced that absolutely all future events are inevitable and unescapable.<sup>1</sup>

But, I think, just as with prognostication, even if it be not entirely infallible, at least its possibilities have appeared worthy of the highest regard, so too in the case of defensive practice, even though it does not furnish a remedy for everything, its authority in some instances at least, however few or unimportant, should be welcomed and prized, and regarded as profitable in no ordinary sense.

Recognizing, apparently, that these things are so, those who have most advanced this faculty of the art, the Egyptians, have entirely united medicine with astronomical prediction.<sup>2</sup> For they would

ful handling of these matters, and the fact that, because a person is rarely found who has so perfect a disposition that none of the remedies escapes him, the faculty which generally resists the force which, unhindered, is effective through the primary natures, is not coupled with the prognostication, and, not being so coupled, creates the opinion concerning all future events without exception that they are inevitable and that it is impossible to ward them off."

### TETRABIBLOS I. 3

never have devised certain means of averting or warding off or remedying the universal and particular conditions that come or are present by reason of the ambient, if they had had any idea that the future cannot be moved and changed. But as it is, they place the faculty of resisting by orderly natural means in second rank to the decrees of fate, and have yoked to the possibility of prognostication its useful and beneficial faculty, through what they call their iatromathematical systems (medical astrology), in order that by means of astronomy they may succeed in learning the qualities of the underlying temperatures, the events that will occur in the future because of the ambient, and their special causes, on the ground that without this knowledge any measures of aid ought for the most part to fail, because the same ones are not fitted for all bodies or diseases; <sup>1</sup> and, on the other hand, by means of medicine, through their knowledge of what is properly sympathetic or antipathetic in each case, they proceed, as far as possible, to take precautionary measures against impending illness and to prescribe infallible treatment for existing disease.

Let this be, to this point, our summarily stated preliminary sketch. We shall now conduct our discussion after the manner of an introduction, <sup>2</sup> beginning with the character of each of the heavenly

<sup>1</sup> Perhaps "affections," the more general sense of the word *πάθος*.

<sup>2</sup> "Introductions" (*εἰσαγωγαί*), or systematic elementary treatises, are a common literary form in antiquity. Nicomachus' *Introduction to Arithmetic* (*εἰσαγωγή ἀριθμητικῆ*) is a good example. The "art" (*τέχνη*) was a similar form of treatise, and might deal with any art or science.

<sup>1</sup> In this chapter and elsewhere Ptolemy makes use of the four Aristotelian principles, hot, cold, wet, dry (e.g. *De generatione et corruptione*, ii. 2, 3). Cf. Boll-Bezold-Gundel, p. 50.

<sup>2</sup> It was a doctrine as old as Thales that the moisture arising from the earth nourished the heavenly bodies; cf.

bodies with respect to its active power, in agreement with the physical observations attached to them by the ancients, and in the first place the powers of the planets, sun, and moon.

#### 4. *Of the Power of the Planets.*

The active power of the sun's essential nature is found to be heating and, to a certain degree, drying.<sup>1</sup> This is made more easily perceptible in the case of the sun than any other heavenly body by its size and by the obviousness of its seasonal changes, for the closer it approaches to the zenith the more it affects us in this way. Most of the moon's power consists of humidifying, clearly because it is close to the earth and because of the moist exhalations<sup>2</sup> therefrom. Its action therefore is precisely this, to soften and cause putrefaction in bodies for the most part, but it shares moderately also in heating power because of the light which it receives from the sun.

It is Saturn's<sup>3</sup> quality chiefly to cool and, moderately, to dry, probably because he is furthest

Diels, *Doxographi Graeci* (Berlin, 1879), p. 276; J. Burnet, *Early Greek Philosophy* (London, 1920), p. 49.

<sup>3</sup> Ptolemy ordinarily says "the (star) of Saturn," "the (star) of Jupiter," etc. (ὁ τοῦ Κρόνου, ὁ τοῦ Διός), and less often merely "Saturn," "Jupiter," and the like, a form of speech which tends to identify the planet and the divinity whose name it bears. On the other hand, he does not use the older Greek names such as Φωσφόρος, Φαίλων, etc. (though Πυροεῖς occurs for Ἄρης in one of the MSS.). See F. Cumont, "Antiochus d'Athènes et Porphyre," *Annuaire de l'Inst. de Philologie et d'Histoire Orientale*, ii. 139, and "Les noms de planètes et d'astrolatrie chez les grecs," *L'Antiquité Classique*, iv. 1, pp. 5-43; Boll-Bezold-Gundel, p. 48.

πλείστον, ὡς ἔοικεν, ἀπέχειν <sup>1</sup> ἅμα τῆς τε τοῦ ἡλίου θερμασίας καὶ τῆς τῶν περὶ τὴν γῆν ὑγρῶν ἀναθυμιάσεως. συνίστανται δὲ δυνάμεις ἐπὶ τε τούτου καὶ τῶν λοιπῶν, καὶ διὰ τῆς τῶν πρὸς τὸν ἥλιον καὶ τὴν σελήνην σχηματισμῶν παρατηρήσεως, ἐπει-  
 18 δὴπερ οἱ μὲν οὕτως, οἱ δὲ οὕτω τὴν τοῦ περιέχοντος κατάστασιν ἐπὶ τὸ μᾶλλον ἢ ἥττον συντρέποντες φαίνονται.

Ἐξ οὗ τοῦ Ἄρεως <sup>2</sup> ξηραίνειν μάλιστα καὶ καυσοῦν ἔχει φύσιν, τῷ τε πυρώδει τοῦ χρώματος οἰκείως καὶ τῇ πρὸς τὸν ἥλιον ἐγγύτητι, ὑποκειμένης αὐτῷ τῆς ἡλιακῆς σφαίρας.

Ἐξ οὗ τοῦ Διὸς εὐκρατον ἔχει τὸ ποιητικὸν τῆς δυνάμεως, μεταξὺ γινομένης τῆς κινήσεως αὐτοῦ τοῦ τε κατὰ τὸν Κρόνον ψυκτικοῦ καὶ τοῦ κατὰ τὸν Ἄρην καυστικοῦ. θερμαίνει τε γὰρ ἅμα καὶ ὑγραίνει, καὶ διὰ τὸ μᾶλλον εἶναι θερμαντικός, ὑπὸ τῶν ὑποκειμένων σφαιρῶν, γονίμων πνευμάτων γίνεται ποιητικός.

Καὶ ὁ τῆς Ἀφροδίτης δὲ τῶν μὲν αὐτῶν ἐστὶ κατὰ τὸ εὐκρατον ποιητικός, <sup>3</sup> ἀλλὰ κατὰ τὸ ἐναντίον. θερμαίνει μὲν γὰρ ἡρέμα διὰ τὴν ἐγγύτητα τὴν πρὸς τὸν ἥλιον· μάλιστα δὲ ὑγραίνει καθάπερ ἡ σελήνη καὶ αὐτὸς διὰ τὸ μέγεθος τῶν ἰδίων φωτῶν, νοσφιζόμενος τὴν ἀπὸ τῶν περιεχόντων τὴν γῆν ὑγρῶν ἀναθυμιάσιν.

## TETRABIBLOS I. 4

removed<sup>1</sup> both from the sun's heat and the moist exhalations about the earth. Both in Saturn's case and in that of the other planets there are powers, too, which arise through the observation of their aspects to the sun and the moon, for some of them appear to modify conditions in the ambient in one way, some in another, by increase or by decrease.

The nature of Mars is chiefly to dry and to burn, in conformity with his fiery colour and by reason of his nearness to the sun, for the sun's sphere lies just below him.

Jupiter has a temperate active force because his movement takes place between the cooling influence of Saturn and the burning power of Mars. He both heats and humidifies; and because his heating power is the greater by reason of the underlying spheres, he produces fertilizing winds.

Venus has the same powers and tempered nature as Jupiter, but acts in the opposite way; for she warms moderately because of her nearness to the sun, but chiefly humidifies, like the moon, because of the amount of her own light and because she appropriates the exhalations from the moist atmosphere surrounding the earth.

<sup>1</sup> The order of the heavenly bodies followed by Ptolemy is Saturn, Jupiter, Mars, Sun, Venus, Meroury, Moon; cf. Bouché-Leclercq, pp. 107-108.

<sup>3</sup> Titulum capituli om. Cam., habent VPLMADÉ.

Mercury in general is found at certain times alike to be drying and absorptive of moisture, because he never is far removed in longitude from the heat of the sun; and again humidifying, because he is next above the sphere of the moon, which is closest to the earth; and to change quickly from one to the other, inspired as it were by the speed of his motion in the neighbourhood of the sun itself.

### 5. *Of Beneficent and Maleficent Planets.*

Since the foregoing is the case, because two of the four humours are fertile and active, the hot and the moist (for all things are brought together and increased by them), and two are destructive and passive, the dry and the cold, through which all things, again, are separated and destroyed, the ancients accepted two of the planets, Jupiter and Venus, together with the moon, as beneficent because of their tempered nature and because they abound in the hot and the moist, and Saturn and Mars as producing effects of the opposite nature, one because of his excessive cold and the other for his excessive dryness; the sun and Mercury, however, they thought to have both powers, because they have a common nature, and to join their influences with those of the other planets, with whichever of them they are associated.

<sup>1</sup> Or matutine ; that is, stars which are above the earth when the sun rises, as evening, or vespertine, stars set after the sun. Cardanus (p. 127) says that whatever planet is

## TETRABIBLOS I. 6

### 6. *Of Masculine and Feminine Planets.*

Again, since there are two primary kinds of natures, male and female, and of the forces already mentioned that of the moist is especially feminine—for as a general thing this element is present to a greater degree in all females, and the others rather in males—with good reason the view has been handed down to us that the moon and Venus are feminine, because they share more largely in the moist, and that the sun, Saturn, Jupiter, and Mars are masculine, and Mercury common to both genders, inasmuch as he produces the dry and the moist alike. They say too that the stars become masculine or feminine according to their aspects to the sun, for when they are morning stars<sup>1</sup> and precede the sun they become masculine, and feminine when they are evening stars and follow the sun. Furthermore this happens also according to their positions with respect to the horizon; for when they are in positions from the orient to mid-heaven,<sup>2</sup> or again from the occident to lower mid-heaven, they become masculine because they are eastern, but in the other two quadrants, as western stars, they become feminine.

less than 6 signs removed from the sun in the order of the signs is feminine and occidental; any that is more than 6 signs distant, masculine and oriental.

<sup>2</sup> Cardanus (*l.c.*) remarks that some do not accept this statement but count all stars from the inferior to the superior mid-heaven (4th to the 10th house) masculine and from the superior to the inferior mid-heaven (10th to the 4th house) feminine. Planets may also become masculine or feminine in consequence of occupying a masculine or feminine sign; see Bouché-Leclercq, p. 103.

⟨ζ.⟩ Περὶ ἡμερινῶν καὶ νυκτερινῶν

Ὅμοίως δὲ ἐπειδὴ τῶν ποιούντων τὸν χρόνον τὰ ἐκφανέστατα διαστήματα δύο ταῦτα τυγχάνει τό τε τῆς ἡμέρας ἡρρενωμένον μᾶλλον διὰ τὸ ἐν αὐτῇ θερμὸν καὶ δραστικὸν καὶ τὸ τῆς νυκτὸς τεθηλυσμένον μᾶλλον διὰ τὸ κατ' αὐτὴν δίϋγρον καὶ ἀναπαστικόν, νυκτερινοὺς μὲν ἀκολουθῶς παραδεδώκασι τὴν τε σελήνην καὶ τὸν τῆς Ἀφροδίτης, ἡμερινοὺς δὲ τὸν τε ἥλιον καὶ τὸν τοῦ Διός, ἐπί-  
 21 κοινον δὲ κατὰ ταῦτὰ τὸν τοῦ Ἑρμοῦ καὶ ἐν μὲν τῷ ἑώῳ σχήματι ἡμερινόν, ἐν δὲ τῷ ἑσπερίῳ νυκτερινόν. προσένειμαν δὲ ἑκατέρω τῶν αἰρέσεων καὶ τοὺς δύο τοὺς τῆς φθαρτικῆς οὐσίας, οὐκ ἔτι μέντοι κατὰ τὰς αὐτὰς τῆς φύσεως αἰτίας, ἀλλὰ κατὰ τὰς ἐναντίας. τοῖς μὲν γὰρ τῆς ἀγαθῆς κράσεως οἰκειούμενα τὰ ὅμοια μεῖζον αὐτῶν τὸ ὠφέλιμον ποιεῖ, τοῖς δὲ φθαρτικοῖς τὰ ἀνοίκεια μιγνύμενα παραλύει τὸ πολὺ<sup>1</sup> τῆς κακώσεως αὐτῶν. ἔνθεν τὸν μὲν τοῦ Κρόνου ψυκτικὸν ὄντα τῷ θερμῷ τῆς ἡμέρας ἀπένειμαν, τὸν δὲ τοῦ Ἄρεως ξηρὸν ὄντα τῷ ὑγρῷ τῆς νυκτὸς· οὕτω γὰρ ἑκάτερος ὑπὸ τῆς κράσεως<sup>2</sup> τῆς συμμετρίας τυχῶν οἰκείος γίνεται τῆς τὸ εὐκρατον παρασχούσης αἰρέσεως.

## TETRABIBLOS I. 7

### 7. *Of Diurnal and Nocturnal<sup>1</sup> Planets.*

Similarly, since of the two most obvious intervals of those which make up time, the day is more masculine because of its heat and active force, and night more feminine because of its moisture and its gift of rest, the tradition has consequently been handed down that the moon and Venus are nocturnal, the sun and Jupiter diurnal, and Mercury common as before, diurnal when it is a morning star and nocturnal as an evening star. They also assigned to each of the sects the two destructive stars, not however in this instance on the principle of similar natures,<sup>2</sup> but of just the opposite; for when stars of the same kind are joined with those of the good temperament their beneficial influence is increased, but if dissimilar stars are associated with the destructive ones the greatest part of their injurious power is broken. Thus they assigned Saturn, which is cold, to the warmth of day, and Mars, which is dry, to the moisture of night, for in this way each of them attains good proportion through admixture and becomes a proper member of its sect, which provides moderation.

<sup>1</sup> These are the sects (*αἵρεσις*, *conditio*, *secta*) of the sun and moon respectively; cf. Vettius Valens, ii. 1, iii. 5; Rhetorius, *ap. CCAG*, i. 146.

<sup>2</sup> *I.e.* that "birds of a feather flock together," in various forms a proverbial expression in Greek; *e.g.* *Odyssey*, 17. 218, ὡς αἰεὶ τὸν ὁμοῖον ἄγει θεὸς ὡς τὸν ὁμοῖον; Plato, *Republic*, 329 A, *Phaedrus*, 240 C, etc.

8. *Of the Power of the Aspects to the Sun.*

Now, mark you, likewise, according to their aspects to the sun, the moon and three of the planets<sup>1</sup> experience increase and decrease in their own powers. For in its waxing from new moon to first quarter the moon is more productive of moisture; in its passage from first quarter to full, of heat: from full to last quarter, of dryness, and from last quarter to occultation,<sup>2</sup> of cold. The planets, in oriental aspects only, are more productive of moisture from rising to their first station,<sup>3</sup> of heat from first station to evening rising, of dryness from evening rising to the second station, of cold from second station to setting; and it is clear that when they are associated with one another they produce very many variations of quality in our ambient, the proper force of each one for the most part persisting, but being changed in quantity by the force of the stars that share the configuration.

<sup>1</sup> Saturn, Jupiter, and Mars; a gloss to this effect has been incorporated into the text of certain MSS. and of Camerarius' editions (see the critical note).

<sup>2</sup> *I.e.* new moon.

<sup>3</sup> By "rising" heliacal rising is meant. The stations are the points in the motion of the planets at which they appear to stand still before beginning retrograde movement. Ptolemy explained these irregularities of movement by the theory of epicycles. *Cf.* Bouché-Leclercq, pp. 111-123.

## TETRABIBLOS I. 9

### 9. *Of the Power of the Fixed Stars.*

As it is next in order to recount the natures of the fixed stars with reference to their special powers, we shall set forth their observed characters in an exposition like that of the natures of the planets, and in the first place those of the ones that occupy the figures in the zodiac<sup>1</sup> itself.

The stars in the head of Aries, then, have an effect like the power of Mars and Saturn, mingled; those in the mouth like Mercury's power and moderately like Saturn's; those in the hind foot like that of Mars, and those in the tail like that of Venus.

Of those in Taurus,<sup>2</sup> the stars along the line where it is cut off have a temperature like that of Venus and in a measure like that of Saturn; those in the Pleiades, like those of the moon and Jupiter; of the stars in the head, the one of the Hyades that is bright and somewhat reddish, called the Torch,<sup>3</sup> has a temperature like that of Mars; the others, like that of Saturn and moderately like that of Mercury; those in the tips of the horns, like that of Mars.

<sup>1</sup>Strictly, "around the ecliptic itself." Properly, the zodiac is ὁ ζωδιακὸς κύκλος, and the ecliptic, the path of the sun through its middle, is ὁ διὰ μέσων (sc. τῶν ζωδίων) κύκλος or ὁ διὰ μέσου (sc. τοῦ ζωδιακοῦ) κύκλος, "the circle through the midst of the signs" or "through the middle of the zodiac."

<sup>2</sup>Taurus was represented as the head and fore parts only of a charging bull.

<sup>3</sup>Aldebaran.

Τῶν δὲ ἐν τοῖς Διδύμοις ἀστέρων οἱ μὲν ἐπὶ τῶν ποδῶν τῆς ὁμοίας κεκοινωνήκασι ποιότητος τῷ τε τοῦ Ἑρμοῦ καὶ ἡρέμα τῷ τῆς Ἀφροδίτης· οἱ δὲ περὶ τοὺς μηροὺς λαμπροὶ τῷ τοῦ Κρόνου· τῶν δὲ ἐν ταῖς κεφαλαῖς δύο λαμπρῶν ὁ μὲν ἐν τῇ προηγουμένῃ τῷ τοῦ Ἑρμοῦ, καλεῖται δὲ καὶ Ἀπόλλωνος· ὁ δὲ ἐν τῇ ἐπομένῃ τῷ τοῦ Ἄρεως, καλεῖται δὲ καὶ Ἡρακλέους.

Τῶν δὲ ἐν τῷ Καρκίνῳ ἀστέρων οἱ μὲν ἐπὶ τῶν ὀφθαλμῶν δύο τῆς αὐτῆς ἐνεργείας εἰσὶ ποιητικοὶ τῷ τε τοῦ Ἑρμοῦ καὶ ἡρέμα τῷ τοῦ Ἄρεως· οἱ δὲ ἐν ταῖς χηλαῖς τῷ τε τοῦ Κρόνου καὶ τῷ τοῦ Ἑρμοῦ· ἡ δὲ ἐν τῷ στήθει νεφελοειδῆς συστροφῆ, καλουμένη δὲ Φάτνη, τῷ τε τοῦ Ἄρεως καὶ τῇ σελήνῃ· οἱ δὲ ἐκατέρωθεν αὐτῆς δύο, καλούμενοι δὲ Ὀνοι, τῷ τοῦ Ἄρεως καὶ τῷ ἡλίῳ

Τῶν δὲ περὶ τὸν Λέοντα οἱ μὲν ἐπὶ τῆς κεφαλῆς δύο τὸ ὅμοιον ποιοῦσι τῷ τε τοῦ Κρόνου καὶ ἡρέμα τῷ τοῦ Ἄρεως, οἱ δὲ ἐν τῷ τραχήλῳ τρεῖς τῷ τοῦ Κρόνου καὶ ἡρέμα τῷ τοῦ Ἑρμοῦ· ὁ δὲ ἐπὶ τῆς καρδίας λαμπρὸς, καλούμενος δὲ Βασιλίσκος, τῷ τοῦ Ἄρεως καὶ τῷ τοῦ Διός· οἱ δὲ ἐν τῇ ὀσφύϊ καὶ ὁ ἐπὶ τῆς οὐρᾶς λαμπρὸς τῷ τοῦ Κρόνου καὶ τῷ τῆς Ἀφροδίτης· οἱ δὲ ἐν τοῖς μηροῖς τῷ τε τῆς Ἀφροδίτης καὶ ἡρέμα τῷ τοῦ Ἑρμοῦ.

Τῶν δὲ κατὰ τὴν Παρθένον οἱ μὲν ἐν τῇ κεφαλῇ καὶ ὁ ἐπ' ἄκρας τῆς νοτίου πτέρυγος ὅμοιον ἔχουσι τὸ ποιητικὸν τῷ τε τοῦ Ἑρμοῦ καὶ ἡρέμα τῷ τοῦ Ἄρεως· οἱ δὲ λοιποὶ τῆς πτέρυγος λαμπροὶ καὶ οἱ

## TETRABIBLOS I. 9

Of the stars in Gemini, those in the feet share the same quality as Mercury and, to a less degree, as Venus ; the bright stars in the thighs, the same as Saturn ; of the two bright stars in the heads,<sup>1</sup> the one in the head in advance the same as Mercury ; it is also called the star of Apollo ; the one in the head that follows, the same as Mars ; it is also called the star of Hercules.

Of the stars in Cancer, the two in the eyes produce the same effect as Mercury, and, to a less degree, as Mars ; those in the claws, the same as Saturn and Mercury ; the cloud-like cluster in the breast, called the Manger,<sup>2</sup> the same as Mars and the moon ; and the two on either side of it, which are called Asses,<sup>3</sup> the same as Mars and the sun.

Of those in Leo, the two in the head act in the same way as Saturn and, to a less degree, as Mars ; the three in the throat, the same as Saturn and, to a less degree, as Mercury ; the bright star upon the heart, called Regulus, the same as Mars and Jupiter ; those in the hip and the bright star in the tail,<sup>4</sup> the same as Saturn and Venus ; and those in the thighs, the same as Venus and, to a less degree, Mercury.

Of the stars in Virgo,<sup>5</sup> those in the head and the one upon the tip of the southern wing have an effect like that of Mercury and, in less degree, of Mars ; the other bright stars of the wing and those on the

<sup>1</sup> These are Castor (" in advance ") and Pollux.

<sup>2</sup> Praesepe ; more popularly, Beehive.

<sup>3</sup> Asinus Borealis and Asinus Australis.

<sup>4</sup>  $\beta$  Leonis.

<sup>5</sup> Virgo was represented as a winged woman bearing in her left hand a stem of wheat, the head of which was marked by the bright star Spica.

κατὰ τὰ περιζώματα τῷ τε τοῦ Ἑρμοῦ καὶ ἡρέμα τῷ τῆς Ἀφροδίτης· ὁ δὲ ἐν τῇ βορείᾳ πτέρυγι λαμπρός, καλούμενος δὲ Προτρυγητήρ, τῷ τοῦ Κρόνου καὶ τῷ τοῦ Ἑρμοῦ· ὁ δὲ καλούμενος Στάχυς τῷ τῆς Ἀφροδίτης καὶ ἡρέμα τῷ τοῦ Ἄρεως· οἱ δὲ ἐν ἄκροις τοῖς ποσὶ καὶ τῷ σύρματι<sup>1</sup> τῷ τοῦ Ἑρμοῦ<sup>2</sup> καὶ ἡρέμα τῷ τοῦ Ἄρεως.

Τῶν δὲ Χηλῶν τοῦ Σκορπίου<sup>3</sup> οἱ μὲν ἐν ἄκραις αὐταῖς ὡσαύτως διατιθέασι τῷ τε τοῦ Διὸς καὶ τῷ τοῦ Ἑρμοῦ· οἱ δὲ ἐν μέσαις τῷ τε τοῦ Κρόνου καὶ ἡρέμα τῷ τοῦ Ἄρεως.

Τῶν δὲ ἐν τῷ σώματι τοῦ Σκορπίου οἱ μὲν ἐν τῷ μετώπῳ λαμπροὶ τὸ αὐτὸ ποιούσι τῷ τε τοῦ Ἄρεως καὶ ἡρέμα τῷ τοῦ Κρόνου· οἱ δὲ ἐν τῷ σώματι τρεῖς, ὧν ὁ μέσος ὑπόκιρρος καὶ λαμπρότερος, καλεῖται δὲ Ἀντάρης, τῷ τοῦ Ἄρεως καὶ ἡρέμα τῷ τοῦ Διὸς· οἱ δὲ ἐν τοῖς σφονδύλοις τῷ τε τοῦ Κρόνου καὶ ἡρέμα τῷ τῆς Ἀφροδίτης· οἱ δὲ ἐπὶ τοῦ κέντρου τῷ τε τοῦ Ἑρμοῦ καὶ τῷ τοῦ Ἄρεως· ἡ δὲ λεγομένη νεφελοειδῆς συστροφὴ τῷ τοῦ Ἄρεως καὶ τῇ σελήνῃ.

Τῶν δὲ περὶ τὸν Τοξότην οἱ μὲν ἐπὶ τῆς ἀκίδος τοῦ βέλους ὅμοιον ἔχουσι τὸ ποιητικὸν τῷ τοῦ Ἄρεως καὶ τῇ σελήνῃ· οἱ δὲ περὶ τὸ τόξον καὶ τὴν λαβὴν τῆς χειρὸς τῷ τε τοῦ Διὸς καὶ τῷ τοῦ Ἄρεως· ἡ

## TETRABIBLOS I. 9

Venus; those in Aquila,<sup>1</sup> of Mars and Jupiter; those in Delphinus, of Saturn and Mars; the bright stars in the Horse,<sup>2</sup> of Mars and Mercury; those in Andromeda, of Venus; those in Triangulum, of Mercury.

Of the stars in the formations south of the zodiac the bright star in the mouth of Piscis Australis<sup>3</sup> has an influence similar to that of Venus and Mercury; those in Cetus, similar to that of Saturn; of those in Orion,<sup>4</sup> the stars on his shoulders similar to that of Mars and Mercury, and the other bright stars similar to that of Jupiter and Saturn; of the stars in Eridanus the last bright one<sup>5</sup> has an influence like that of Jupiter and the others like that of Saturn; the star in Lepus, like that of Saturn and Mercury; of those in Canis, the others like that of Venus, and the bright star in the mouth,<sup>6</sup> like that of Jupiter and, to a less degree, of Mars; the bright star Procyon, like that of Mercury and, in a less degree, that of Mars; the bright stars in Hydra,<sup>7</sup> like that of Saturn and Venus; those in Crater, like that of Venus and, in a less degree, of Mercury; those in Corvus, like that of Mars and Saturn; the bright stars of Argo,<sup>8</sup> like that of Saturn and Jupiter; of those in Centaurus, the ones

<sup>1</sup> Altair is in this group.

<sup>2</sup> Pegasus.

<sup>3</sup> The bright star is Fomalhaut.

<sup>4</sup> Rigel and Betelgeuse are the brightest stars here.

<sup>5</sup> The "last bright star" in Eridanus is Achernar.

<sup>6</sup> Sirius, which is in Canis.

<sup>7</sup> The brightest star is Alphard.

<sup>8</sup> These are Canopus and Var.

τῷ τε τῆς Ἀφροδίτης καὶ τῷ τοῦ Ἑρμοῦ, οἱ δὲ ἐν τῷ ἵππῳ λαμπροὶ τῷ τε τῆς Ἀφροδίτης καὶ τῷ τοῦ Διός· οἱ δὲ περὶ τὸ Θηρίον λαμπροὶ τῷ τε τοῦ Κρόνου καὶ ἡρέμα τῷ τοῦ Ἄρεως· οἱ δὲ ἐν τῷ Θυματηρίῳ τῷ τε τῆς Ἀφροδίτης καὶ ἡρέμα τῷ  
 28 τοῦ Ἑρμοῦ.<sup>1</sup> οἱ δὲ ἐν τῷ νοτίῳ Στεφάνῳ λαμπροὶ τῷ τε τοῦ Κρόνου καὶ τῷ τοῦ Ἑρμοῦ.<sup>2</sup>

## TETRABIBLOS I. 9-10

in the human body, like that of Venus and Mercury, and the bright stars in the equine body like that of Venus and Jupiter; the bright stars in Lupus, like that of Saturn and, in less degree, of Mars; those in Ara, like that of Venus and, to a lesser degree, of Mercury; and the bright stars in Corona Australis, like that of Saturn and Mercury.

Such, then, are the observations of the effects of the stars themselves as made by our predecessors.

### 10. *Of the Effect of the Seasons and of the Four Angles.*

Of the four seasons of the year, spring, summer, autumn, and winter, spring exceeds in moisture on account of its diffusion after the cold has passed and warmth is setting in; the summer, in heat, because of the nearness of the sun to the zenith; autumn more in dryness, because of the sucking up of the moisture during the hot season just past; and winter exceeds in cold, because the sun is farthest away from the zenith. For this reason, although there is no natural beginning of the zodiac, since it is a circle, they assume that the sign which begins with

<sup>1</sup> Cf. *Almagest*, iii. 1 (p. 192, 19-22), where Ptolemy defines the year as the return of the sun to the points fixed by the equinoxes and solstices. The sign of Aries, defined as the 30° beginning with the vernal equinox, is, of course, very different from the sign considered as the actual constellation. This gave rise to an argument against astrology, first expressed by Origen. Cf. Boll-Bezold-Gundel,

the vernal equinox, that of Aries,<sup>1</sup> is the starting-point of them all, making the excessive moisture of the spring the first part of the zodiac as though it were a living creature, and taking next in order the remaining seasons, because in all creatures the earliest ages,<sup>2</sup> like the spring, have a larger share of moisture and are tender and still delicate. The second age, up to the prime of life, exceeds in heat, like summer; the third, which is now past the prime and on the verge of decline, has an excess of dryness, like autumn; and the last, which approaches dissolution, exceeds in its coldness, like winter.

Similarly, too, of the four regions and angles of the horizon, from which originate the winds from the cardinal points,<sup>3</sup> the eastern one likewise excels in dryness because, when the sun is in that region, whatever has been moistened by the night then first begins to be dried; and the winds which blow from

pp. 131-132; Bouché-Leclercq, p. 129, n. 1; Ashmand, Ptolemy's *Tetrabiblos*, p. 32, n.

<sup>2</sup> Ptolemy here enumerates four ages of man, as do also many Pythagorizing arithmologists, when they praise the number 4, as, for example, *Theologoumena Arithmetica*, p. 20 Ast, Diogenes Laertius, viii. 1. 10 Martianus Capella, vii. 734, etc. Ptolemy later (iv. 10) speaks of seven ages, assigning one to each planet; the arithmologists have also a series of seven ages which they cite in praise of the number 7; e.g. Philo, *De mundi opificio* 36. There are also lists in which the ages are merely made up of hebdomadic groups of years.

<sup>3</sup> Proclus' paraphrase for οἱ καθ' ὄλα μέρη πνέοντες ἄνεμοι is οἱ καθολικοὶ ἄνεμοι, which is closer than the Latin translations, *totas illas partes occupantes venti* (Gogava), and *venti, qui totas illas partes occupant* (Melanchthon). Ptolemy means the winds from the cardinal points and around them.

ἀπηλιώτας καλοῦμεν,<sup>1</sup> ἄνικμοί τε εἰσι καὶ ξηραν-  
 τικοί. ὁ δὲ πρὸς μεσημβριαν τόπος αὐτός τέ ἐστι  
 θερμότατος διὰ τε τὸ πυρῶδες τῶν τοῦ ἡλίου  
 μεσουρανήσεων καὶ διὰ τὸ ταύτας κατὰ τὴν τῆς  
 ἡμετέρας οἰκουμένης ἔγκλισιν πρὸς μεσημβρίαν  
 μᾶλλον ἀποκλίνειν· οἷ τε ἀπ' αὐτοῦ πνέοντες  
 ἄνεμοι, οὓς κοινῶς νότους καλοῦμεν, θερμοί τε εἰσι  
 καὶ μανωτικοί. ὁ δὲ πρὸς ταῖς δυσμαῖς τόπος  
 αὐτός τέ ἐστιν ὑγρὸς διὰ τὸ κατ' αὐτὸν γινομένου  
 30 τοῦ ἡλίου τὰ ἀπὸ τῆς ἡμέρας ἀναποθέντα τότε  
 πρῶτον ἄρχεσθαι διυγραίνεσθαι· οἷ τε ἀπ' αὐτοῦ  
 φερόμενοι ἄνεμοι, οὓς κοινότερον ζεφύρους καλοῦ-  
 μεν, νεαροί τε εἰσι καὶ ὑγραντικοί. ὁ δὲ πρὸς ταῖς  
 ἄρκτοις τόπος αὐτός τέ ἐστι ψυχρότατος διὰ τὸ  
 κατὰ τὴν τῆς ἡμετέρας οἰκουμένης ἔγκλισιν τὰς  
 τῆς θερμότητος αἰτίας τῶν τοῦ ἡλίου μεσουρανή-  
 σεων πλέον αὐτοῦ διεστάναι, ὡσπερ<sup>2</sup> ἀντιμεσου-  
 ρανοῦντος· οἷ τε ἀπ' αὐτοῦ πνέοντες ἄνεμοι, οἱ  
 καλούμενοι κοινῶς βορέαι, ψυχροί τε ὑπάρχουσι  
 καὶ πυκνωτικοί.

Χρησίμη δὲ καὶ ἡ τούτων διάληψις πρὸς τὸ τὰς  
 συγκράσεις πάντα τρόπον ἐκάστοτε δύνασθαι<sup>3</sup>  
 διακρίνειν. εὐκατανόητον γὰρ διότι καὶ παρὰ τὰς  
 τοιαύτας καταστάσεις ἦτοι τῶν ὥρῶν ἢ τῶν ἡλικιῶν  
 ἢ τῶν γωνιῶν τρέπεται πῶς τὸ ποιητικὸν τῆς τῶν  
 ἀστέρων δυνάμεως, καὶ ἐν μὲν ταῖς οἰκείαις κατα-  
 στάσεσιν ἀκρατοτέραν τε ἔχουσι τὴν ποιότητα καὶ  
 τὴν ἐνέργειαν ἰσχυροτέραν, οἷον ἐν ταῖς θερμαῖς οἱ

<sup>1</sup> καλοῦσιν NCam.

<sup>2</sup> Post ὡσπερ add. τοῦ ἡλίου NCam., om. alii.

it, which we call in general *Apeliotes*,<sup>1</sup> are without moisture and drying in effect. The region to the south is hottest because of the fiery heat of the sun's passages through mid-heaven and because these passages, on account of the inclination of our inhabited world, diverge more to the south; and the winds which blow thence and are called by the general name *Notus* are hot and rarefying. The region to the west is itself moist, because when the sun is therein the things dried out during the day then first begin to become moistened; likewise the winds which blow from this part, which we call by the general name *Zephyrus*, are fresh and moist. The region to the north is the coldest, because through our inhabited world's inclination it is too far removed from the causes of heat arising from the sun's culmination, as it is also when the sun is at its lower culmination; and the winds which blow thence, which are called by the general name *Boreas*, are cold and condensing in effect.

The knowledge of these facts is useful to enable one to form a complete judgement of temperatures in individual instances. For it is easily recognizable that, together with such conditions as these, of seasons, ages, or angles, there is a corresponding variation in the potency of the stars' faculties, and that in the conditions akin to them their quality is purer and their effectiveness stronger, those that are heating by nature, for instance, in heat, and those that

<sup>1</sup> This is the usual Attic form; the alternative, ἀφελιώτης, shows more clearly its derivation from ἥλιος, "the wind that blows from the sun."

<sup>1</sup> κράσεις, "mixtures"; astrologically used to designate  
the resultant qualities derived from the mingling of various  
influences. Cf. *The Life and Opinions of Tristram Shandy*,  
Bk. I, Chapter 11, "who . . . seemed not to have had  
one single drop of Danish blood in his whole crasis."

## TETRABIBLOS I. 10-11

are moistening in the moist, while under opposite conditions their power is adulterated and weaker. Thus the heating stars in the cold periods and the moistening stars in the dry periods are weaker, and similarly in the other cases, according to the quality produced by the mixture.

### 11. *Of Solstitial, Equinoctial, Solid, and Bicorporeal Signs.*

After the explanation of these matters the next subject to be added would be the natural characters of the zodiacal signs themselves, as they have been handed down by tradition. For although their more general temperaments<sup>1</sup> are each analogous to the seasons that take place in them,<sup>2</sup> certain peculiar qualities of theirs arise from their kinship<sup>3</sup> to the sun, moon, and planets, as we shall relate in what follows, putting first the unmingled powers of the signs themselves alone, regarded both absolutely and relatively to one another.

The first distinctions, then, are of the so-called solstitial, equinoctial, solid, and bicorporeal signs.<sup>4</sup>

<sup>2</sup> That is, when the sun is in these signs.

<sup>3</sup> οἰκείωσις, also translated "familiarity," is a common astrological term denoting the various relationships of affinity derived from the positions of signs or planets with reference to the universe or to each other, as, for example, through the aspects (c. 13).

<sup>4</sup> All but Virgo are represented as bicorporeal in fact. Ptolemy, as a learned writer, pays less attention to the fanciful and mythological classification of the signs into terrestrial, aquatic, four-footed, etc. (although he refers to them in i. 12), and gives greater prominence to the astronomical classification.

δύο μὲν γάρ ἐστι τροπικά, τό τε πρῶτον ἀπὸ τῆς  
θερινῆς τροπῆς λ' μοῖρον, τὸ τοῦ Καρκίνου· καὶ τὸ  
πρῶτον ἀπὸ τῆς χειμερινῆς τροπῆς, τὸ κατὰ τὸν  
Αἰγόκερων. ταῦτα δὲ ἀπὸ τοῦ συμβεβηκότος  
εἴληφε τὴν ὀνομασίαν. τρέπεται γὰρ ἐν ταῖς ἀρχαῖς  
αὐτῶν γινόμενος ὁ ἥλιος, ἐπιστρέφων εἰς τὰ ἐναντία  
τὴν κατὰ πλάτος πάροδον, καὶ κατὰ μὲν τὸν Καρκί-  
νον θέρος ποιῶν, κατὰ δὲ τὸν Αἰγόκερων χειμῶνα.  
δύο δὲ καλεῖται ἰσημερινά, τό τε ἀπὸ τῆς ἐαρινῆς  
ἰσημερίας πρῶτον δωδεκατημόριον, τὸ τοῦ Κριοῦ,  
καὶ τὸ ἀπὸ τῆς μετοπωρινῆς τὸ τῶν Χηλῶν,  
32 ὠνόμασται δὲ καὶ ταῦτα πάλιν ἀπὸ τοῦ συμβεβη-  
κότος, ἐπειδὴ κατὰ τὰς ἀρχὰς αὐτῶν γινόμενος ὁ  
ἥλιος ἴσας ποιεῖ πανταχῆ τὰς νύκτας ταῖς ἡμέραις.

Τῶν δὲ λοιπῶν ὀκτὼ δωδεκατημορίων τέτταρα  
μὲν καλεῖται στερεά, τέτταρα δὲ δίσωμα. καὶ  
στερεὰ μὲν ἐστι τὰ ἐπόμενα τοῖς τε τροπικοῖς  
καὶ τοῖς ἰσημερινοῖς, Ταῦρος, Λέων, Σκορπίος,  
Ἵδροχόος, ἐπειδὴ τῶν ἐν ἐκείνοις ἀρχομένων ὠρῶν  
αἶ τε ὑγρότητες καὶ θερμότητες καὶ ξηρότητες καὶ  
ψυχρότητες, ἐν τούτοις γινομένου τοῦ ἡλίου,<sup>1</sup> μᾶλλον  
καὶ στερεώτερον ἡμῶν καθικνοῦνται, οὐ τῶν κατα-  
στημάτων φύσει γινομένων τότε ἀκρατοτέρων, ἀλλ'  
ἡμῶν ἐγκεχρονικῶτων αὐτοῖς ἤδη καὶ διὰ τοῦτο τῆς  
ἰσχύος<sup>2</sup> εὐαισθητότερον ἀντιλαμβάνομένων.

## TETRABIBLOS I. 11

For there are two solstitial signs, the first interval of  $30^{\circ}$  from the summer solstice, the sign of Cancer, and the first from the winter solstice, Capricorn; and they have received their name<sup>1</sup> from what takes place in them. For the sun turns when he is at the beginning of these signs and reverses his latitudinal progress, causing summer in Cancer and winter in Capricorn. Two signs are called equinoctial, the one which is first from the spring equinox, Aries, and the one which begins with the autumnal equinox, Libra; and they too again are named from what happens there, because when the sun is at the beginning of these signs he makes the nights exactly equal to the days.

Of the remaining eight signs four are called solid and four bicorporeal. The solid signs, Taurus, Leo, Scorpio, and Aquarius, are those which follow the solstitial and equinoctial signs; and they are so called because when the sun is in them the moisture, heat, dryness, and cold of the seasons that begin in the preceding signs touch us more firmly, not that the weather is naturally any more intemperate at that time, but that we are by then inured to them and for that reason are more sensible of their power.

The bicorporeal signs, Gemini, Virgo, Sagittarius, and Pisces, are those which follow the solid signs,

<sup>1</sup> *I.e.* τροπικόν, "having to do with turning (τροπή)." Astronomers to-day usually call them "solstitial" instead of "tropical," since "tropic" generally refers to the terrestrial circles, the Tropic of Cancer and the Tropic of Capricorn.

εἶναι τῶν στερεῶν καὶ τῶν τροπικῶν καὶ ἰσημερινῶν, καὶ ὡσπερ κεκοινωνηκέναι κατὰ τὰ τέλη καὶ τὰς ἀρχὰς τῆς τῶν δύο καταστημάτων φυσικῆς ἰδιοτροπίας.

⟨ιβ.⟩ Περὶ ἀρρενικῶν καὶ θηλυκῶν  
ζωδίων

Πάλιν δὲ ὡσαύτως ἕξ μὲν τῶν δωδεκατημορίων ἀπένειμαν τῇ φύσει τῇ ἀρρενικῇ καὶ ἡμερινῇ, τὰ δὲ ἴσα τῇ θηλυκῇ καὶ νυκτερινῇ. καὶ ἡ μὲν τάξις  
33 αὐτοῖς ἐδόθη παρ' ἐν διὰ τὸ συνεξεῦχθαι καὶ ἐγγὺς αἰεὶ τυγχάνειν τὴν τε ἡμέραν τῇ νυκτὶ καὶ τὸ θῆλυ τῷ ἄρρενι. τῆς δὲ ἀρχῆς ἀπὸ τοῦ Κριοῦ δι' αἶς εἶπομεν αἰτίας λαμβανομένης, ὡσαύτως δὲ καὶ τοῦ ἄρρενος ἄρχοντος καὶ πρωτεύοντος, ἐπειδὴ καὶ τὸ ποιητικὸν αἰεὶ τοῦ παθητικοῦ πρῶτόν ἐστι τῇ δυνάμει, τὸ μὲν τοῦ Κριοῦ δωδεκατημόριον καὶ ἔτι τὸ τῶν Χηλῶν ἀρρενικὰ ἔδοξε καὶ ἡμερινά, καὶ ἅμα ἐπειδήπερ ὁ ἰσημερινὸς κύκλος δι' αὐτῶν γραφόμενος τὴν πρώτην καὶ ἰσχυροτάτην τῶν ὄλων φορὰν ἀποτελεῖ· τὰ δὲ ἐφεξῆς αὐτῶν ἀκολουθῶς<sup>1</sup> τῇ παρ' ἐν, ὡς ἔφαμεν, τάξει.

Χρῶνται δέ τινες τῇ τάξει τῶν ἀρρενικῶν καὶ θηλυκῶν<sup>2</sup> καὶ ἀπὸ τοῦ ἀνατέλλοντος δωδεκατημορίου, ὃ δὴ καλοῦσιν ὠρόσκοπον, τὴν ἀρχὴν τοῦ ἄρρενος<sup>3</sup> ποιούμενοι. ὡσπερ γὰρ καὶ τὴν τῶν

and are so called because they are between the solid and the solstitial and equinoctial signs and share, as it were, at end and beginning, the natural properties of the two states of weather.

### 12. *Of Masculine and Feminine Signs.*

Again, in the same way they assigned six of the signs to the masculine and diurnal nature<sup>1</sup> and an equal number to the feminine and nocturnal. An alternating order was assigned to them because day is always yoked to night and close to it, and female to male. Now as Aries is taken as the starting-point for the reasons we have mentioned, and as the male likewise rules and holds first place, since also the active is always superior to the passive in power, the signs of Aries and Libra were thought to be masculine and diurnal, an additional reason being that the equinoctial circle which is drawn through them completes the primary and most powerful movement of the whole universe.<sup>2</sup> The signs in succession after them correspond, as we said, in alternating order.

Some, however, employ an order of masculine and feminine signs whereby the masculine begins with the sign that is rising, called the horoscope.<sup>3</sup> For just as some begin the solstitial signs with the moon's

<sup>1</sup> The signs of the zodiac, as well as the planets, are divided between the two sects (*cf.* i. 7).

<sup>2</sup> *I.e.* the general revolution of the heavens, carrying the fixed stars and the other heavenly bodies (according to the Ptolemaic and other ancient systems).

<sup>3</sup> Obviously, in a system like this, a given sign would not always belong to the same sect.

τροπικῶν ἀρχὴν ἀπὸ τοῦ σεληνιακοῦ ζωδίου<sup>1</sup> λαμβάνουσιν ἔνιοι διὰ τὸ ταύτην τάχιον τῶν ἄλλων τρέπεσθαι, οὕτω καὶ τὴν τῶν ἀρρενικῶν ἀπὸ τοῦ ὠροσκοποῦντος διὰ τὸ ἀπηλιωτικώτερον,<sup>2</sup> καὶ οἱ μὲν ὁμοίως παρ' ἐν πάλιν τῇ τάξει χρώμενοι, οἱ δὲ καθ' ὅλα τεταρτημόρια διαιροῦντες καὶ ἐῶα μὲν ἡγούμενοι<sup>3</sup> καὶ ἀρρενικὰ τό τε ἀπὸ τοῦ ὠροσκόπου μέχρι τοῦ μεσουρανοῦντος καὶ τὸ κατ' ἀντίθεσιν ἀπὸ τοῦ δύνοντος μέχρι τοῦ ὑπὸ γῆν μεσουρανοῦν-

## TETRABIBLOS I. 12

sign because the moon changes direction more swiftly than the rest, so they begin the masculine signs with the horoscope because it is further to the east, some as before making use of the alternate order of signs, and others dividing by entire quadrants, and designating as matutinal and masculine signs those of the quadrant from the horoscope to mid-heaven and those of the opposite quadrant from the occident to the lower mid-heaven, and as evening and feminine the other two quadrants. They have also attached other descriptions <sup>1</sup> to the signs, derived from their shapes; I refer, for example, to "four-footed," "terrestrial," "commanding," "fecund," and similar appellations. These, since their reason and their significance are directly derived, we think it superfluous to enumerate, since the quality resulting from such conformations can be explained in connection with those predictions wherein it is obviously useful.

<sup>1</sup> For this type of classification, *cf.* Bouché-Leclercq, pp. 149-152. Vettius Valens, pp. 5 ff. (Kroll), attaches many epithets to the signs; *cf.* also Antiochus, *ap. CCAG*, viii. 112; Rhetorius, *ap. CCAG*, i. 164 ff. Some of them figure in ii. 7, below.

⟨ιγ.⟩ Περὶ τῶν συσχηματιζομένων

ἡμίσεως καὶ τοῦ τρίτου, τὸ μὲν εἰς δύο τὴν τοῦ

<sup>1</sup> Cf. the note on οἰκείωσις (i. 11). οἰκειοῦσθαι is the corresponding verb.

<sup>2</sup> The aspects are geometrical relationships between the heavenly bodies. Ptolemy recognizes here only four—opposition, trine, quartile, and sextile—as having significance, and does not class “conjunction” as an aspect, although it is treated as such throughout the *Tetrabiblos*.

13. *Of the Aspects of the Signs.*

Of the parts of the zodiac those first are familiar<sup>1</sup> one to another which are in aspect.<sup>2</sup> These are the ones which are in opposition, enclosing two right angles, six signs, and 180 degrees ; those which are in trine, enclosing one and one-third right angles, four signs, and 120 degrees ; those which are said to be in quartile, enclosing one right angle, three signs, and 90 degrees, and finally those that occupy the sextile position, enclosing two-thirds of a right angle, two signs, and 60 degrees.

We may learn from the following why only these intervals have been taken into consideration. The explanation of opposition is immediately obvious, because it causes the signs to meet on one straight line. But if we take the two fractions and the two superparticulars<sup>3</sup> most important in music, and if the fractions one-half and one-third be applied to

Kepler is said to have invented several others, based on other aliquot parts of 360°, the semiquadrate, quintile, sesquiquadrate, biquintile, etc. (*cf.* Ashmand, pp. 40-41, nn.); these have been employed by modern astrologers, but the Ptolemaic doctrines of this and the 16th chapter are inconsistent with their use. The intervals between bodies in aspect in the four ways here mentioned can be measured in whole signs.

<sup>3</sup> Nicomachus of Gerasa, *Introduction to Arithmetic*, i. 19, defines the superparticular as "a number that contains within itself the whole of the number compared with it, and some one factor of it besides." The "two superparticulars most important to music" are the first two in the series, the sesquialter ( $\frac{3}{2}$ ) and the sesquitercian ( $\frac{4}{3}$ ), which correspond to the diapente and diatessarion respectively (*cf.* Nicomachus, *op. cit.*, ii. 26).

τετραγώνου πεποίηκε, τὸ δὲ εἰς τρία τὴν τοῦ ἑξαγώνου καὶ τὴν τοῦ τριγώνου.<sup>1</sup> ἐπιμορίων δὲ πρὸς τὸ τῆς μιᾶς ὀρθῆς τετράγωνον μεταξὺ λαμβανομένου τοῦ τε ἡμιολίου καὶ τοῦ ἐπιτρίτου, τὸ μὲν ἡμιόλιον ἐποίησε τὴν τοῦ τετραγώνου πρὸς τὴν τοῦ ἑξαγώνου, τὸ δὲ ἐπίτριτον τὴν τοῦ τριγώνου πρὸς τὴν τοῦ τετραγώνου. τούτων μέντοι τῶν σχηματισμῶν οἱ μὲν τρίγωνοι καὶ ἑξάγωνοι σύμφωνοι καλοῦνται διὰ τὸ ἐξ ὁμογενῶν συγκεῖσθαι δωδεκατημορίων ἢ ἐκ πάντων θηλυκῶν ἢ ἀρρενικῶν· ἀσύμφωνοι δὲ οἱ τετράγωνοι καὶ οἱ κατὰ διάμετρον διότι κατὰ ἀντίθεσιν τῶν ὁμογενῶν τὴν σύστασιν λαμβάνουσιν.

⌊ιδ.⌋ Περὶ προστάττοντων καὶ ἀκουόντων

Ὡσαύτως δὲ προστάττοντα καὶ ἀκούοντα λέγεται τμήματα τὰ κατ' ἴσην διάστασιν ἀπὸ τοῦ αὐτοῦ, ἢ καὶ ὁποτέρου, τῶν ἰσημερινῶν σημείων ἐσχηματισμένα διὰ τὸ ἐν τοῖς ἴσοις χρόνοις ἀναφέρεσθαι καὶ ἐπὶ τῶν ἴσων εἶναι παραλλήλων.

<sup>1</sup> κα. τὴν τοῦ τριγώνου libri omnes Proc.; καὶ τ. τ. τετραγώνου Cam.<sup>1</sup>; om. Cam.<sup>2</sup>

<sup>1</sup> That is,  $\frac{1}{2}$  of  $180^\circ = 90^\circ$  (quartile) and  $\frac{1}{3}$  of  $180^\circ = 60^\circ$  (sextile). All the MSS. and Proclus add here "and trine," which perhaps we should, with Camerarius (ed. 2), discard. The trine, however, could be regarded as  $\frac{1}{3}$  of  $360^\circ$  or as twice the sextile.

<sup>2</sup> That is, the sesquialter =  $\frac{3}{2} = \frac{90^\circ}{60^\circ}$  and the sesquitercian =  $\frac{4}{3} = \frac{120^\circ}{90^\circ}$ .

## TETRABIBLOS I. 13-14

opposition, composed of two right angles, the half makes the quartile and the third the sextile and trine.<sup>1</sup> Of the superparticulars, if the sesquialter and sesquitercian be applied to the quartile interval of one right angle, which lies between them, the sesquialter makes the ratio of the quartile to the sextile and the sesquitercian that of trine to quartile.<sup>2</sup> Of these aspects trine and sextile are called harmonious because they are composed of signs of the same kind, either entirely of feminine or entirely of masculine signs; while quartile and opposition are disharmonious because they are composed of signs of opposite kinds.

### 14. *Of Commanding and Obeying Signs.*

Similarly the names "commanding" and "obeying"<sup>3</sup> are applied to the divisions of the zodiac which are disposed at an equal distance from the same equinoctial sign, whichever it may be, because they ascend<sup>4</sup> in equal periods of time and are on equal parallels. Of these the ones in the summer

<sup>1</sup> Cf. Bouché-Leclercq, pp. 159-164, on this and the following chapter. The pairs which "command" and "obey" (the "commanding" sign first) are: Taurus-Pisces, Gemini-Aquarius, Cancer-Capricorn, Leo-Sagittarius, Virgo-Scorpio. Aries and Libra are left out of the scheme, being the equinoctial signs from which the start is made; so Manilius, ii. 485, 501. The original notion seems to have been that these signs "heard" (*ἀκούειν*) each other, and the idea of "obeying" (*ὑπακούειν*) was a pseudo-scientific elaboration.

<sup>4</sup> Cf. the note on iii. 10 (pp. 286 ff.) for the ascension of the signs.

## PTOLEMY

τούτων δὲ τὰ μὲν ἐν τῷ θερινῷ ἡμικυκλίῳ προστάττοντα καλεῖται, τὰ δ' ἐν τῷ χειμερινῷ ὑπακούοντα, διὰ τὸ κατ' ἐκείνο μὲν γινόμενον τὸν ἥλιον μείζονα ποιεῖν τῆς νυκτὸς τὴν ἡμέραν, κατὰ τοῦτο δὲ ἐλάττω.

### 36 <ιε.> Περὶ βλεπόντων καὶ ἰσοδυναμούντων

Πάλιν δὲ ἰσοδυναμεῖν φασιν ἀλλήλοις μέρη τὰ τοῦ αὐτοῦ καὶ ὁποτέρου τῶν τροπικῶν σημείων τὸ ἴσον ἀφεστῶτα, διὰ τὸ καθ' ἐκάτερον αὐτῶν τοῦ ἡλίου γινομένου τὰς τε ἡμέρας ταῖς ἡμέραις καὶ τὰς νύκτας ταῖς νυξὶ καὶ τὰ διαστήματα τῶν οἰκειῶν ὥρῶν ἰσοχρόνως<sup>1</sup> ἀποτελεῖσθαι. ταῦτα δὲ καὶ βλέπειν ἀλλήλα λέγεται διὰ τε τὰ προειρημένα καὶ ἐπειδήπερ ἐκάτερον αὐτῶν ἔκ τε τῶν αὐτῶν μερῶν τοῦ ὀρίζοντος ἀνατέλλει καὶ εἰς τὰ αὐτὰ καταδύνει.

### <ισ.> Περὶ ἀσυνδέτων

Ἀσύνδετα δὲ καὶ ἀπηλλοτριωμένα καλεῖται τμήματα ὅσα μηδένα λόγον ἀπλῶς ἔχει πρὸς ἀλλήλα τῶν προκατειλεγμένων οἰκειώσεων. ταῦτα δὲ ἐστὶν ἢ μήτε τῶν προστάττοντων ἢ ἀκούοντων τυγχάνει μήτε τῶν βλεπόντων ἢ ἰσοδυναμούντων, ἔτι καὶ τῶν ἐκκειμένων τεττάρων σχηματισμῶν,

<sup>1</sup> ἰσοχρόνως VMAE, -ων P, -ος D, -α Proc., -ια NLCam.

<sup>1</sup> In the summer hemisphere are the signs Aries, Taurus, Gemini, Cancer, Leo, and Virgo; Libra, Scorpio, Sagittarius,

hemisphere<sup>1</sup> are called "commanding" and those in the winter hemisphere "obedient," because the sun makes the day longer than the night when he is in the summer hemisphere, and shorter in the winter.

15. *Of Signs which Behold each other and Signs of Equal Power.*

Again they say that the parts which are equally removed from the same tropical sign, whichever it may be, are of equal power,<sup>2</sup> because when the sun comes into either of them the days are equal to the days, the nights to the nights, and the lengths of their own hours<sup>3</sup> are the same. These also are said to "behold" one another both for the reasons stated and because each of the pair rises from the same part of the horizon and sets in the same part.

16. *Of Disjunct Signs.*

"Disjunct" and "alien" are the names applied to those divisions of the zodiac which have none whatever of the aforesaid familiarities with one another. These are the ones which belong neither to the class of commanding or obeying, beholding or of equal power, and furthermore they are found

Capricorn, Aquarius, and Pisces are in the winter hemisphere; see the diagram in Bouché-Leclercq, p. 161.

<sup>2</sup> These pairs are Gemini-Leo, Taurus-Virgo, Aries-Libra, Pisces-Scorpio, and Aquarius-Sagittarius; Cancer and Capricorn are left without mates (ἀζύγα).

<sup>3</sup> "Their own hours" are "ordinary" or "civil" hours (καιρικαὶ ὥραι; cf. p. 286, n. 3), which are always one-twelfth of the day (sunrise to sunset) or night (sunset to sunrise). Of course, they are equal if the days and nights are equal.

## PTOLEMY

## TETRABIBLOS I. 16-17

to be entirely without share in the four aforesaid aspects, opposition, trine, quartile, and sextile, and are either one or five signs apart ; for those which are one sign apart are as it were averted from one another and, though they are two, bound the angle of one, and those that are five signs apart divide the whole circle into unequal parts, while the other aspects make an equal division of the perimeter.

### 17. *Of the Houses of the Several Planets.*

The planets also have familiarity with the parts of the zodiac, through what are called their houses, triangles, exaltations, terms,<sup>1</sup> and the like. The system of houses is of the following nature. Since of the twelve signs the most northern, which are closer than the others to our zenith and therefore most productive of heat and of warmth are Cancer and Leo, they assigned these to the greatest and most powerful heavenly bodies, that is, to the luminaries, as houses, Leo, which is masculine, to the sun and Cancer, feminine, to the moon. In keeping with this they assumed the semicircle from Leo to Capricorn to be solar and that from Aquarius to Cancer to be lunar, so that in each of the semicircles one sign might be assigned to each of the five planets as its own, one bearing aspect to the

<sup>1</sup> ὄρια, *termini*, literally "boundaries" ; see c. 20. The triangles or triplicities are treated in c. 18 and the exaltations in c. 19.

## TETRABIBLOS I. 17

sun and the other to the moon, consistently with the spheres of their motion <sup>1</sup> and the peculiarities of their natures.<sup>2</sup> For to Saturn, in whose nature cold prevails, as opposed to heat, and which occupies the orbit highest and farthest from the luminaries, were assigned the signs opposite Cancer and Leo, namely Capricorn and Aquarius,<sup>3</sup> with the additional reason that these signs are cold and wintry, and further that their diametrical aspect is not consistent with beneficence. To Jupiter, which is moderate and below Saturn's sphere, were assigned the two signs next to the foregoing, windy and fecund, Sagittarius and Pisces, in triangular aspect <sup>4</sup> to the luminaries, which is a harmonious and beneficent configuration. Next, to Mars, which is dry in nature and occupies a sphere under that of Jupiter, there were assigned again the two signs, contiguous to the former, Scorpio and Aries, having a similar nature, and, agreeably to Mars' destructive and inharmonious quality, in quartile aspect <sup>5</sup> to the luminaries. To Venus, which is temperate and beneath Mars, were given the next two signs, which are extremely fertile, Libra and Taurus. These

<sup>1</sup> That is, they are in the order of their distance from the centre of the universe, the earth.

<sup>2</sup> *Cf.* c. 4.

<sup>3</sup> Capricorn opposes Cancer and Aquarius Leo.

<sup>4</sup> Sagittarius is triangular to Leo, the sun's house, and Pisces to Cancer. *Cf.* c. 13 on the "harmonious" nature of the trine and sextile, in contrast with quartile and opposition.

<sup>5</sup> Aries is quartile to the moon's house, Cancer, and Scorpio to the sun's house, Leo. They are, however, also triangular to these houses, Aries to Leo and Scorpio to Cancer.

διαστάσεως, καὶ ἐπειδήπερ οὐ πλέον δύο δωδεκατημορίων ὁ ἀστήρ οὗτος ἐφ' ἑκάτερον τὸ πλείστον ἀφίσταται τοῦ ἡλίου· ἐπὶ τέλει δὲ τῷ τοῦ Ἑρμοῦ μηδεποτε πλέον ἐνὸς δωδεκατημορίου τὴν ἀπὸ τοῦ ἡλίου ἐφ' ἑκάτερα διάστασιν ποιουμένῳ καὶ ὑπὸ μὲν τοὺς ἄλλους ὄντι, σύνεγγυς δὲ μᾶλλον πως ἀμφοτέρων τῶν φωτῶν, τὰ λοιπὰ καὶ συνεχῆ τοῖς ἐκείνων οἴκοις ἐδόθη δύο δωδεκατημόρια τό τε τῶν Διδύμων καὶ τὸ τῆς Παρθένου.

## TETRABIBLOS I. 17-18

preserve the harmony of the sextile aspect ;<sup>1</sup> another reason is that this planet at most is never more than two signs removed from the sun in either direction. Finally, there were given to Mercury, which never is farther removed from the sun than one sign in either direction and is beneath the others and closer in a way to both of the luminaries, the remaining signs, Gemini and Virgo, which are next to the houses of the luminaries.

### 18. *Of the Triangles.*

The familiarity by triangles is as follows. Inasmuch as the triangular and equilateral form is most harmonious with itself,<sup>2</sup> the zodiac also is bounded by three circles, the equinoctial and the two tropics, and its twelve parts are divided into four equilateral triangles. The first of these, which passes through Aries, Leo, and Sagittarius, is composed of three masculine signs and includes the houses of the sun, of Mars, and of Jupiter. This triangle was assigned to the sun and Jupiter, since Mars is not of the solar sect.<sup>3</sup> The sun assumes first governance of it by day and Jupiter by night. Also, Aries is close to the equinoctial circle, Leo to the summer solstice and

<sup>1</sup> Taurus is sextile to Cancer and Libra to Leo.

<sup>2</sup> This statement savours of Neo-Pythagoreanism; *cf.*, for example, the demonstration by Nicomachus (*Introduction to Arithmetic*, ii. 7. 4) of the proposition that the triangle is the most elementary plane figure, which is also Platonic doctrine (*Timaeus* 53C ff.); note likewise the much repeated statement that the number 3 is the first plane surface; Theon of Smyrna, p. 46, 14 (ed. Hiller), Macrobius, *Somnium Scipionis*, i. 6. 22, etc.

<sup>3</sup> See c. 7.

πρὸς τῷ θερινῷ, ὁ δὲ Τοξότης πρὸς τῷ χειμερινῷ. γίνεται δὲ καὶ προηγουμένως μὲν τοῦτο τὸ τρίγωνον βόρειον, διὰ τὴν τοῦ Διὸς συνοικοδεσποτίαν, ἐπειδήπερ οὗτος γόνιμός τέ ἐστι καὶ πνευματώδης οἰκείως τοῖς ἀπὸ τῶν ἄρκτων ἀνέμοις. διὰ δὲ τὸν τοῦ Ἄρεως οἶκον λαμβάνει μίξιν τοῦ λιβὸς καὶ συνίσταται<sup>1</sup> βορρολιβυκόν, ἐπειδήπερ ὁ τοῦ Ἄρεως τοιούτων ἐστὶ πνευμάτων ποιητικὸς, διὰ τε τὴν τῆς σελήνης αἴρεσιν καὶ τὸ τῶν δυσμῶν τεθηλυσμένον.

Τὸ τε δεύτερον τρίγωνον, ὃ ἐστὶ διὰ τε τοῦ Ταύρου καὶ Παρθένου καὶ Αἰγόκερω, συγκείμενον ἐκ τριῶν θηλυκῶν, ἀκολουθῶς ἐδόθη σελήνη τε καὶ Ἀφροδίτη, οἰκοδεσποτούσης αὐτοῦ<sup>2</sup> νυκτὸς μὲν  
 40 τῆς σελήνης, ἡμέρας δὲ τοῦ τῆς Ἀφροδίτης. καὶ ἔστιν ὁ μὲν Ταῦρος πρὸς τῷ θερινῷ κύκλῳ μᾶλλον, ἢ δὲ Παρθένος πρὸς τῷ ἰσημερινῷ, ὁ δὲ Αἰγόκερος πρὸς τῷ χειμερινῷ. γίνεται δὲ καὶ τοῦτο τὸ τρίγωνον προηγουμένως μὲν νότιον διὰ τὴν τῆς Ἀφροδίτης οἰκοδεσποτίαν, ἐπειδήπερ ὁ ἀστὴρ οὗτος τῶν ὁμοίων ἐστὶ πνευμάτων διὰ τὸ θερμὸν καὶ ἔνικμον τῆς δυνάμεως ποιητικὸς. προσλαβὼν δὲ μίξιν ἀπηλιώτου διὰ τὸ τὸν τοῦ Κρόνου οἶκον ἐν αὐτῷ τυγχάνειν τὸν Αἰγόκερων συνίσταται καὶ αὐτὸ νοταπηλιωτικὸν κατ' ἀντίθεσιν τοῦ πρώτου, ἐπειδήπερ καὶ ὁ τοῦ Κρόνου τοιούτων ἐστὶ πνευμάτων ποιητικὸς οἰκειούμενος καὶ αὐτὸς ταῖς ἀνατολαῖς διὰ τὴν πρὸς τὸν ἥλιον αἴρεσιν.

<sup>2</sup> αὐτοῦ PLMA, αὐτῶν VDNECam.

## TETRABIBLOS I. 18

Sagittarius to the winter solstice. This triangle is preëminently northern because of Jupiter's share in its government, since Jupiter is fecund and windy,<sup>1</sup> similarly to the winds from the north. However, because of the house of Mars it suffers an admixture of the south-west wind<sup>2</sup> and is constituted *Borrolibycon*, because Mars causes such winds and also because of the set of the moon and the feminine quality of the occident.<sup>3</sup>

The second triangle, which is the one drawn through Taurus, Virgo, and Capricorn, is composed of three feminine signs, and consequently was assigned to the moon and Venus; the moon governs it by night and Venus by day. Taurus lies toward the summer tropic, Virgo toward the equinox, and Capricorn toward the winter tropic. This triangle is made preëminently southern because of the dominance of Venus, since this star through the heat and moisture of its power produces similar winds; but as it receives an admixture of Apeliotes because the house of Saturn, Capricornus, is included within it, it is constituted *Notapeliotes*<sup>4</sup> in contrast to the first triangle, since Saturn produces winds of this kind and is related to the east through sharing in the set of the sun.

<sup>1</sup> Cf. c. 4.

<sup>2</sup> *Africus*, *Lips*.

<sup>3</sup> In c. 10 the west is characterized as moist, which is regarded as a feminine quality (cf. c. 6).

<sup>4</sup> I.e. south-east.

## PTOLEMY

Τὸ δὲ τρίτον τρίγωνον ὃ ἐστὶ<sup>1</sup> τὸ διὰ τε Διδύμων καὶ Χηλῶν καὶ Ὑδροχόου, ἐκ τριῶν ἀρρενικῶν ζωδίων συγκείμενον, καὶ πρὸς μὲν τὸν τοῦ Ἄρεως μηδένα λόγον ἔχον, πρὸς δὲ τὸν τοῦ Κρόνου καὶ τὸν τοῦ Ἑρμοῦ διὰ τοὺς οἴκους, τούτοις ἀπενεμήθη,<sup>2</sup> πάλιν οἰκοδεσποτοῦντος ἡμέρας μὲν τοῦ Κρόνου διὰ τὴν αἵρεσιν, νυκτὸς δὲ τοῦ Ἑρμοῦ. καὶ ἐστὶ τὸ μὲν τῶν Διδύμων δωδεκατημόριον πρὸς τῷ θερινῷ, τὸ δὲ τῶν Χηλῶν πρὸς τῷ ἰσημερινῷ, τὸ δὲ τοῦ Ὑδροχόου πρὸς τῷ χειμερινῷ. συνίσταται δὲ καὶ τοῦτο τὸ τρίγωνον προηγουμένως μὲν ἀπηλιωτικὸν διὰ τὸν τοῦ Κρόνου· κατὰ δὲ τὴν μίξιν βορραπηλιωτικὸν διὰ τὴν τοῦ Διὸς αἵρεσιν τῷ τοῦ Κρόνου πρὸς τὸ τὸν ἡμερινὸν λόγον συνοικειοῦσθαι.

<sup>1</sup> τρίτον δὲ τρίγωνόν ἐστι PLNCam.

<sup>2</sup> ἀπενεμήθη VPMADÉ, om. L, ἀπονεμηθέν NCam.

## TETRABIBLOS I. 18

The third triangle is the one drawn through Gemini, Libra, and Aquarius, composed of three masculine signs, and having no relation to Mars but rather to Saturn and Mercury because of their houses. It was assigned in turn to these, with Saturn governing during the day on account of his sect and Mercury by night. The sign of Gemini lies toward the summer tropic, Libra toward the equinox, and Aquarius toward the winter tropic. This triangle also is primarily of eastern constitution, because of Saturn, but by admixture north-eastern, because the sect of Jupiter has familiarity with Saturn, inasmuch as it is diurnal.

The fourth triangle, which is the one drawn through Cancer, Scorpio, and Pisces, was left to the only remaining planet, Mars, which is related to it through his house, Scorpio; and along with him, on account of the sect and the femininity of the signs, the moon by night and Venus by day are co-rulers. Cancer is near the summer circle, Scorpio lies close to the winter one, and Pisces to the equinox. This triangle is constituted preëminently western, because it is dominated by Mars and the moon; but by admixture it becomes south-western through the domination of Venus.

<sup>2</sup> καὶ ὅπου αὔξεται NMAECam. (αὐξάνει NECam.); κ. ὅπου τὸ ψυχρὸν αὔξεται, ἐκεῖ ἐκμειοῦται τὸ θερμὸν VD; κ. ὅπου ἐκείνῳ μειοῦτε, τὸ θερμὸν αὔξεται P.

## TETRABIBLOS I. 19

### 19. *Of Exaltations.*

The so-called exaltations<sup>1</sup> of the planets have the following explanation. Since the sun, when he is in Aries, is making his transition to the northern and higher semicircle, and in Libra is passing into the southern and lower one, they have fittingly assigned Aries to him as his exaltation, since there the length of the day and the heating power of his nature begin to increase, and Libra as his depression for the opposite reasons.

Saturn again, in order to have a position opposite to the sun, as also in the matter of their houses,<sup>2</sup> took, contrariwise, Libra as his exaltation and Aries as his depression. For where heat increases there cold diminishes, and where the former diminishes cold on the contrary increases. And since the moon, coming to conjunction in the exaltation of the sun, in Aries, shows her first phase and begins to increase her light and, as it were, her height, in the first sign of her own triangle, Taurus, this was called her exaltation, and the diametrically opposite sign, Scorpio, her depression.

Then Jupiter, which produces the fecund north winds, reaches farthest north in Cancer and brings

<sup>1</sup> These have nothing to do with aphelion or perihelion; the planets are exalted or depressed in power in these positions: Boll-Bezold-Gundel, p. 59; Bouché-Leclercq pp. 192-199.

<sup>2</sup> Cf. c. 17; the houses of Saturn are the signs in opposition to the houses of the sun and moon.

<sup>3</sup> *πάλιν ἐπειδὴ* VADE; *πάλιν ἐπὶ δεῖ* P; *πάλιν. ἐπεὶ δὲ libri alii* Cam.

πάλιν και πληροί τήν ἴδιαν δύναμιν· ὅθεν τοῦτο μὲν τὸ δωδεκατημόριον ὕψωμα πεποιήκασιν αὐτοῦ, τὸν δὲ Αἰγόκερων ταπεινωμα.

Ἄλλο δὲ τοῦ Ἄρεως φύσει καυσώδης ὢν και μᾶλλον ἐν Αἰγόκερω δια τὸ νοτιώτατον γίνεσθαι καυστικώτερος γινόμενος, και αὐτὸς μὲν εἰκότως ἔλαβεν ὕψωμα κατ' ἀντίθεσιν τῷ τοῦ Διὸς τὸν Αἰγόκερων, ταπεινωμα δὲ τὸν Καρκίνον.

Πάλιν ὁ μὲν<sup>1</sup> τῆς Ἀφροδίτης ὑγραντικὸς ὢν φύσει και μᾶλλον ἐν τοῖς Ἰχθύσι, ἐν οἷς ἡ τοῦ ὑγροῦ ἕαρος ἀρχὴ προσημαίνεται, και αὐτὸς αὐξάνων τὴν οἰκείαν δύναμιν, τὸ μὲν ὕψωμα ἔσχεν ἐν τοῖς Ἰχθύσι, τὸ δὲ ταπεινωμα ἐν τῇ Παρθένῳ.

Ἄλλο δὲ τοῦ Ἑρμοῦ τὸ ἐναντίον μᾶλλον<sup>2</sup> ὑπόξηρος ὢν εἰκότως και κατὰ τὸ ἀντικείμενον ἐν μὲν τῇ Παρθένῳ, καθ' ἣν τὸ ξηρὸν μετόπωρον προσημαίνεται,<sup>3</sup> και αὐτὸς ὡσπερ ὑψοῦται, κατὰ δὲ τοὺς Ἰχθῦς ταπεινοῦται.

43 <κ.> Περὶ ὀρίων διαθέσεως<sup>4</sup>

Περὶ δὲ τῶν ὀρίων δισσοὶ μάλιστα φέρονται τρόποι, και ὁ μὲν ἐστὶν Αἰγυπτιακός, ὁ πρὸς τὰς τῶν οἴκων ὡς ἐπὶ πᾶν κυρίας· ὁ δὲ Χαλδαϊκός, ὁ πρὸς τὰς τῶν τριγώνων οἰκοδεσποτίας. ὁ μὲν οὖν Αἰγυπτιακὸς ὁ τῶν κοινῶς φερομένων ὀρίων οὐ πάνυ τοι σώζει τὴν ἀκολουθίαν οὔτε τῆς τάξεως οὔτε τῆς καθ' ἕκαστον ποσότητος. πρῶτον μὲν γὰρ ἐπὶ τῆς

## TETRABIBLOS I. 19-20

his own power to fullness ; they therefore made this sign his exaltation and Capricorn his depression.

Mars, which by nature is fiery and becomes all the more so in Capricorn because in it he is farthest south, naturally received Capricorn as his exaltation, in contrast to Jupiter, and Cancer as his depression.

Venus, however, as she is moist by nature and increases her own proper power all the more in Pisces, where the beginning of the moist spring is indicated, has her exaltation in Pisces and her depression in Virgo.

Mercury, on the contrary, since he is drier, by contrast naturally is exalted, as it were, in Virgo, in which the dry autumn is signified, and is depressed in Pisces.

### 20. *Of the Disposition of Terms.*

With regard to the terms two systems are most in circulation ; the first is the Egyptian,<sup>1</sup> which is chiefly based on the government of the houses, and the second the Chaldaean, resting upon the government of the triplicities. Now the Egyptian system of the commonly accepted terms does not at all preserve the consistency either of order or of individual quantity. For in the first place, in the

<sup>1</sup> Probably the system of the mythical Nechepso and Petosiris ; it is the system of Dorotheus of Sidon, Firmicus Maternus, and Paulus Alexandrinus. Cf. Bouché-Leclercq, pp. 206-210, who discusses Ptolemy's criticism of the Egyptian *termini*.

<sup>6</sup> ἀναλογίαν libri, ἀνακολουθίαν Cam.

matter of order, they have sometimes assigned the first place to the lords of the houses and again to those of the triplicities, and sometimes also to the lords of the exaltations. For example, if it is true that they have followed the houses, why have they assigned precedence to Saturn, say, in Libra,<sup>1</sup> and not to Venus, and why to Jupiter in Aries and not to Mars? And if they follow the triplicities, why have they given Mercury, and not Venus,<sup>2</sup> first place in Capricorn? Or if it be exaltations, why give Mars, and not Jupiter, precedence in Cancer<sup>3</sup>; and if they have regard for the planets that have the greatest number of these qualifications, why have they given first place in Aquarius to Mercury, who has only his triplicity there, and not to Saturn, for it is both the house and the triplicity of Saturn? Or why have they given Mercury first place in Capricorn at all, since he has no relation of government to the sign? One would find the same kind of thing in the rest of the system.

Secondly, the number of the terms manifestly has no consistency; for the number derived for each planet from the addition of its terms in all the signs, in accordance with which they say the planets assign years of life,<sup>4</sup> furnishes no suitable or acceptable argument. But even if we rely upon the

<sup>1</sup> Libra is the solar house of Venus; Saturn's houses are Capricorn and Aquarius. Similarly Mars is at home in Aries, Jupiter's houses being Pisces and Sagittarius.

<sup>2</sup> *Cf.* c. 18; Venus and the moon govern the second triangle. <sup>3</sup> *Cf.* c. 19; Mars' exaltation is in Capricorn.

<sup>4</sup> For the doctrine that the sum of the terms of each planet determines the life-time of those born under its influence, *cf.* Bouché-Leclercq, p. 408.

## TETRABIBLOS I. 20

number derived from this summation, in accordance with the downright claim of the Egyptians, the sum would be found the same, even though the amounts, sign by sign, be frequently changed in various ways. And as for the specious and sophistic assertion<sup>1</sup> about them that some attempt to make, namely that the times assigned to each single planet by the schedule of ascensions in all the climes add up to this same sum, it is false. For, in the first place, they follow the common method, based upon evenly progressing increases in the ascensions, which is not even close to the truth. By this scheme they would have each of the signs Virgo and Libra, on the parallel which passes through lower Egypt, ascend in  $38\frac{1}{3}$  times,<sup>2</sup> and Leo and Scorpio each in 35, although it is shown by the tables<sup>3</sup> that these latter ascend in more than 35 times and Virgo and Libra in less. Furthermore, those who have endeavoured to establish this theory even so do not seem to follow the usually accepted number of terms, and are compelled to make many false statements, and they have even made use of fractional parts of fractions in the effort to save their hypothesis, which, as we said, is itself not a true one.

<sup>1</sup> This perhaps means that the sum of the times of ascension of the two signs assigned as houses to each planet gave, according to the theory of these unnamed astrologers, the number of years of life which they assigned to those born under them; cf. Bouché-Leclercq, p. 209.

<sup>2</sup> A "time" is the period taken by one degree of the equator to rise above the horizon.

<sup>1</sup> This method, as Bouché-Leclercq remarks (p. 210), is less "optimistic" than the Egyptian or the Ptolemaic method, because it assigned to the maleficent planets a larger number of terms and more first places in the various signs.

<sup>2</sup> The *Paraphrase* of Proclus, by connecting the ὥστε

21. *According to the Chaldaeans.*

The Chaldaean method<sup>1</sup> involves a sequence, simple, to be sure, and more plausible, though not so self-sufficient with respect to the government of the triangles and the disposition of quantity, so that, nevertheless, one could easily understand them even without a diagram.<sup>2</sup> For in the first triplicity, Aries, Leo, and Sagittarius, which has with them the same division by signs as with the Egyptians, the lord of the triplicity, Jupiter,<sup>3</sup> is the first to receive terms, then the lord of the next triangle, Venus, next the lord of the triangle of Gemini, Saturn, and Mercury, and finally the lord of the remaining triplicity, Mars. In the second triplicity, Taurus, Virgo, and Capricorn, which again has the same division by signs, Venus is first, then Saturn, and again Mercury, after these Mars, and finally

clause solely with the expression οὐχ οὕτω δὲ αὐταρκῆ κ.τ.λ., interprets this sentence to mean that because of the lack of self-sufficiency mentioned one cannot readily understand the Chaldaean system without a diagram. Against this view two considerations are to be urged: (1) the Chaldaean system actually is simplicity itself compared with those of the Egyptians and of Ptolemy; (2) the adversative μέντοι ("nevertheless," "in spite of all this") and the intrusive καί have no meaning in Proclus' interpretation of the passage. The ὥστε clause is really dependent upon all that precedes, not merely a portion of it. The anonymous commentator (p. 41, ed. Wolf) agrees with the present interpretation. What Ptolemy misses in the Chaldaean system is the elaborate accompaniment of justifying reasons, dear to his heart even in a pseudo-science.

<sup>3</sup> The sun is the diurnal ruler of this triplicity (see c. 18), but no terms are assigned to the luminaries. Similarly the moon is disregarded in the second and fourth triangles.

τελευταῖος δὲ ὁ τοῦ Διὸς σχεδὸν δὲ καὶ ἐπὶ τῶν λοιπῶν δύο τριγώνων ἡ τάξις ἦδε συνροᾶται. τῶν μέντοι τοῦ αὐτοῦ τριγώνου δύο κυρίων, λέγω δὲ τοῦ τοῦ Κρόνου καὶ τοῦ τοῦ Ἑρμοῦ, τὸ πρωτεῖον τῆς κατὰ τὸ οἰκεῖον τάξεως ἡμέρας μὲν ὁ τοῦ Κρόνου λαμβάνει, νυκτὸς δὲ ὁ τοῦ Ἑρμοῦ. καὶ ἡ καθ' ἕκαστον δὲ ποσότης ἀπλῆ τις οὔσα τυγχάνει. ἵνα γὰρ καθ' ὑπόβασιν τῆς τῶν πρωτείων τάξεως καὶ ἡ ποσότης τῶν ἐκάστου ὀρίων μιᾷ μοίρα λείπηται τῆς προτεταγμένης, τῷ μὲν πρώτῳ πάντοτε διδόασι μοίρας ἦ', τῷ δὲ δευτέρῳ ζ', τῷ δὲ τρίτῳ ς', τῷ δὲ τετάρτῳ ε', τῷ δὲ τελευταίῳ δ', συμπληρουμένων οὕτω τῶν κατὰ τὸ ζῶδιον λ' μοιρῶν. συνάγονται δὲ καὶ ἐκ τούτων τοῦ μὲν Κρόνου μοῖραι ἡμέρας μὲν οἡ', νυκτὸς δὲ ξς'. τοῦ δὲ Διὸς οβ'. τοῦ δὲ Ἄρεως ξθ'. τῆς δὲ Ἀφροδίτης οε'. τοῦ δὲ Ἑρμοῦ ἡμέρας μὲν ξς', νυκτὸς δὲ οἡ'. γίνονται μοῖραι τξ'.

Τούτων μὲν οὖν τῶν ὀρίων ἀξιοπιστότερα, ὡς  
 47 ἔφαμεν, τυγχάνει<sup>1</sup> τὰ κατὰ τὸν Αἰγυπτιακὸν τρόπον καὶ διὰ τὸ τὴν συναγωγὴν αὐτῶν παρὰ τοῖς Αἰγυπτίοις συγγραφεῦσιν ὡς χρησίμην ἀναγραφῆς ἠξιῶσθαι καὶ διὰ τὸ συμφωνεῖν αὐτοῖς ὡς ἐπὶ πᾶν τὰς μοίρας τῶν ὀρίων ταῖς κατατεταγμέναις ὑπ' αὐτῶν παραδειγματικαῖς γενέσεσιν. αὐτῶν μέντοι τούτων τῶν συγγραφέων μηδαμῆ τὴν σύνταξιν αὐτῶν μηδὲ τὸν ἀριθμὸν ἐμφανισάντων, ὑποπτον ἂν

<sup>1</sup> ὡς ἔφαμεν τυγχάνει VPLNAD, φαμεν τυγχάνειν ME, om. Cam.

Jupiter. This arrangement in general is observed also in the remaining two triplicities.<sup>1</sup> Of the two lords of the same triplicity, however, Saturn and Mercury, by day<sup>2</sup> Saturn takes the first place in the order of ownership, by night Mercury. The number assigned to each is also a simple matter. For in order that the number of terms of each planet may be less by one degree than the preceding, to correspond with the descending order in which first place is assigned, they always assign 8° to the first, 7° to the second, 6° to the third, 5° to the fourth, and 4° to the last; thus the 30° of a sign is made up. The sum of the number of degrees thus assigned to Saturn is 78 by day and 66 by night, to Jupiter 72, to Mars 69, to Venus 75, to Mercury 66 by day and 78 by night; the total is 360 degrees.

Now of these terms those which are constituted by the Egyptian method are, as we said, more worthy of credence, both because in the form in which they have been collected by the Egyptian writers they have for their utility been deemed worthy of record, and because for the most part the degrees of these terms are consistent with the nativities which have been recorded by them as examples. As these very writers, however, nowhere explain their arrangement or their number, their failure to agree in an account

<sup>1</sup> *I.e.* the order of the planets is always the same, but the leader (or pair of leaders, in the case of Saturn and Mercury) in one triangle is shifted to the last position when one comes to the next triangle. Hence, since the number of terms in each sign are also always 8, 7, 6, 5, 4, the Chaldaean system makes the assignment of terms exactly the same in the corresponding signs of each triangle.

<sup>2</sup> *I.e.* in a diurnal nativity.

## TETRABIBLOS I. 21

of the system might well become an object of suspicion and a subject for criticism. Recently, however, we have come upon an ancient manuscript, much damaged, which contains a natural and consistent explanation of their order and number, and at the same time the degrees reported in the aforesaid nativities and the numbers given in the summations were found to agree with the tabulation of the ancients. The book was very lengthy in expression and excessive in demonstration, and its damaged state made it hard to read, so that I could barely gain an idea of its general purport; that too, in spite of the help offered by the tabulations of the terms, better preserved because they were placed at the end of the book.<sup>1</sup> At any rate the general scheme of assignment of the terms is as follows. For their arrangement within each sign, the exaltations, triplicities, and houses are taken into consideration. For, generally speaking, the star that has two rulerships of this sort in the same sign is placed first, even though it may be maleficent. But wherever this condition does not exist, the maleficent planets are always put last, and the lords of the exaltation first, the lords of the triplicity next, and then those of the

<sup>1</sup> Ptolemy's ancient manuscript, therefore, if it really existed, was probably in the form of a roll, for there the last pages would be protected. The first and last pages of a codex would be liable to damage, since they would be outermost.

house, following the order of the signs.<sup>1</sup> And again in order, those that have two lordships each are preferred to the one which has but one in the same sign. Since terms are not allotted to the luminaries, however, Cancer and Leo, the houses of the sun and moon, are assigned to the maleficent planets because they were deprived of their share in the order, Cancer to Mars and Leo to Saturn;<sup>2</sup> in these the order appropriate to them is preserved. As for the number of the terms, when no star is found with two prerogatives, either in the sign itself or in those which follow it within the quadrant, there are assigned to each of the beneficent planets, that is, to Jupiter and Venus, 7°; to the maleficent, Saturn and Mars, 5° each; and to Mercury, which is common, 6°; so that the total is 30°. But since some always have two prerogatives—for Venus alone becomes the ruler of the triplicity of Taurus, since the moon does not participate in the terms—there is given to each one of those in such condition, whether it be in the same sign or in the following signs within the quadrant, one extra degree; these were marked with dots.<sup>3</sup> But the degrees added for double prerogatives are taken away from the others, which have but one, and, generally speaking, from Saturn and Jupiter

<sup>1</sup> *I.e.* in the order Aries, Taurus, Gemini, etc., which the Greeks called "the order of the following signs" and regarded as proceeding to the left.

<sup>2</sup> According to the anonymous commentator (p. 42, ed. Wolf), this is because Mars belongs to the nocturnal sect and Saturn to the diurnal, the leaders of which are, respectively, the moon and the sun.

<sup>3</sup> In Ptolemy's ancient manuscript; so says the anonymous commentator (p. 44, ed. Wolf).

<sup>1</sup> After the tables and before this chapter-heading some of the MSS. have: "There result from the addition of

22. *Of Places and Degrees.*<sup>1</sup>

Some have made even finer divisions of rulership than these, using the terms "places" and "degrees." Defining "place" as the twelfth part of a sign, or  $2\frac{1}{2}^{\circ}$ , they<sup>2</sup> assign the domination over them to the signs in order. Others follow other illogical orders; and again they assign each "degree" from the beginning to each of the planets of each sign in accordance with the Chaldaean order of terms. These matters, as they have only plausible and not natural, but, rather, unfounded, arguments in their favour, we shall omit. The following, however, upon which it is worth while to dwell, we shall not pass by, namely, that it is reasonable to reckon the beginnings of the signs also from the equinoxes and solstices,<sup>3</sup> partly because the writers make this quite clear, and particularly because from our previous demonstrations we observe that their natures, powers, and familiarities take their cause from the solstitial

these, of Saturn,  $57^{\circ}$ ; of Jupiter,  $79^{\circ}$ ; of Mars,  $66^{\circ}$ ; of Venus,  $82^{\circ}$ ; of Mercury,  $76^{\circ}$ ; the total is  $360^{\circ}$ ."

<sup>2</sup> One MS. and the printed editions insert here, "begin with the sign in which the star is and"; cf. the critical note.

<sup>3</sup> That is, Ptolemy's zodiac, made up of 12 divisions of  $30^{\circ}$  each, measured on the ecliptic from one of the solstices or equinoxes, is entirely different from the zodiac made up of signs determined by the actual constellations. Because of the precession of the equinoxes the two by no means coincide; and because the powers of the signs are derived from their relations to the solstitial and equinoctial points, says Ptolemy, the former definition of the zodiac is preferable. Cf. cc. 10-11, and the distinction between solstitial, equinoctial, solid, and bicorporeal signs, as an example of what he means.

καὶ οὐκ ἀπ' ἄλλου τινὸς ἐχούσας<sup>1</sup> τὴν αἰτίαν. ἄλλων μὲν γὰρ ἀρχῶν ὑποτιθεμένων ἢ μηκέτι συγχρῆσθαι ταῖς φύσεσιν αὐτῶν εἰς τὰς προτελέσεις ἀναγκασθησόμεθα ἢ συγχρώμενοι διαπίπτειν, παραβάντων καὶ ἀπαλλοτριωθέντων<sup>2</sup> τῶν τὰς δυνάμεις αὐτοῖς ἐμπεριποιησάντων τοῦ ζωδιακοῦ διαστημάτων.

⟨κγ.⟩ Περὶ προσώπων καὶ λαμπηνῶν  
καὶ τῶν τοιούτων

Αἱ μὲν οὖν συνοικειώσεις τῶν ἀστέρων καὶ τῶν δωδεκατημορίων σχεδὸν ἂν εἶεν τοσαῦται. λέγονται  
51 δὲ καὶ ἰδιοπρόσωποι μὲν ὅταν ἕκαστος αὐτῶν τὸν αὐτὸν διασώζη πρὸς ἥλιον ἢ καὶ σελήνην σχηματισμὸν ὄνπερ καὶ ὁ οἶκος αὐτοῦ πρὸς τοὺς ἐκείνων οἴκους· οἷον ὅταν ὁ τῆς Ἀφροδίτης λόγου ἔνεκεν ἐξάγωνον ποιῇ πρὸς τὰ φῶτα διάστασιν, ἀλλὰ πρὸς ἥλιον μὲν ἐσπέριος ὢν, πρὸς σελήνην δὲ ἐῶος, ἀκολουθῶς τοῖς ἐξ ἀρχῆς οἴκοις· λαμπήναις δὲ ἐν ἰδίαις εἶναι καὶ θρόνοις καὶ τοῖς τοιούτοις ὅταν κατὰ δύο ἢ καὶ πλείους τῶν προεκτεθειμένων

<sup>1</sup> ἔχοντας NCam.

<sup>2</sup> ἀπαλλοτριωθέντων VPLD ἀλλοτριωθέντων MNAECam. (ἀλλω- Cam.).

<sup>1</sup> Just as, with the precession of the equinoxes, the fictive sign Aries is now almost entirely in Pisces.

<sup>2</sup> The scholiast on Ptolemy says that, in addition to the conditions laid down by Ptolemy, a planet, to be in proper face, must also be in its own house and must be in the necessary aspect with *both* the luminaries (not with one of them, as Ptolemy says).

## TETRABIBLOS I. 22-23

and equinoctial starting-places. and from no other source. For if other starting-places are assumed, we shall either be compelled no longer to use the natures of the signs for prognostications or, if we use them, to be in error. since the spaces of the zodiac which implant their powers in the planets would then pass over to others<sup>1</sup> and become alienated.

### 23. *Of Faces, Chariots, and the Like.*

Such, then, are the natural affinities of the stars and the signs of the zodiac. The planets are said to be in their "proper face"<sup>2</sup> when an individual planet keeps to the sun or moon the same aspect which its house has to their houses; as, for example, when Venus is in sextile to the luminaries, provided that she is occidental to the sun and oriental to the moon, in accordance with the original arrangement of their houses.<sup>3</sup> They are said to be in their own "chariots" and "thrones"<sup>4</sup> and the like when they

<sup>3</sup> Venus' solar house, Libra, is sextile dexter (*i.e.* toward the west) to Leo, the sun's house, and her lunar house, Taurus, is sextile sinister (*i.e.* toward the east) to the moon's house, Cancer.

<sup>4</sup> Ptolemy pays little attention to the thrones and chariots, which were apparently, as Bouché-Leclercq (p. 244) asserts, not to his taste as a scientific astrologer. In the Michigan astrological roll (P. Mich. 149, col. 3A, 22-34) the "thrones" are identified with the (astrological) exaltations and the depressions of the planets are called their "prisons" (*φυλακαί*); upon the thrones the planets have "royal power," in their prisons they "are abased and oppose their own powers." Sarapion (*CCAG.* viii. 4, p. 228, 25, and p. 231, 13) and Balbillus (*ibid.*, p. 237, 8) use the word *ἰδιοθρονεῖν*.

τρόπων συνοικειούμενοι τυγχάνωσι τοῖς τόποις ἐν οἷς καταλαμβάνονται, τότε<sup>1</sup> μάλιστα τῆς δυνάμεως αὐτῶν ἀξανομένης πρὸς ἐνέργειαν διὰ τὸ ὅμοιον καὶ συμπρακτικὸν τῆς τῶν περιεχόντων δωδεκατημορίων ὁμοφυοῦς οἰκειότητος.<sup>2</sup> χαίρειν δέ φασιν αὐτοὺς ὅταν κἂν μὴ πρὸς αὐτοὺς ἦ ἡ συνοικείωσις τῶν περιεχόντων ζωδίων ἀλλὰ μέντοι πρὸς τοὺς τῶν αὐτῶν αἱρέσεων, ἐκ μακροῦ μᾶλλον οὕτω γινομένης τῆς συμπαθείας. κοινωνοῦσι δὲ ὅμως καὶ κατὰ τὸν αὐτὸν τρόπον τῆς ὁμοιότητος ὥσπερ ὅταν ἐν τοῖς ἡλλοτριωμένοις καὶ τῆς ἐναντίας αἱρέσεως τόποις καταλαμβάνωνται, πολὺ παραλύεται τὸ τῆς οἰκείας αὐτῶν δυνάμεως, ἄλλην τινὰ φύσιν μικτὴν ἀποτελούσης τῆς κατὰ τὸ ἀνόμοιον τῶν περιεχόντων ζωδίων κράσεως.

52 <κδ.> Περὶ συναφειῶν καὶ ἀπορροειῶν  
καὶ τῶν ἄλλων δυνάμεων

Καὶ καθ' ὅλου δὲ συνάπτειν μὲν λέγονται τοῖς ἐπομένοις οἱ προηγούμενοι, ἀπερρυηκῆναι δὲ οἱ ἐπόμενοι τῶν προηγουμένων, ἐφ' ὅσον ἂν μὴ μακρὸν ἦ τὸ μεταξὺ αὐτῶν διάστημα. παραλαμβάνεται δὲ

<sup>1</sup> τότε γὰρ MNAECam. ; γὰρ om. VPLD.

<sup>2</sup> ἰδιοθρονεῖν καὶ λάμπειν λέγονται add. MNAECam. ; om. VPLD.

<sup>1</sup> Vettius Valens uses this word several times in a broader sense than that of this definition.

<sup>2</sup> I.e. are more occidental.

<sup>3</sup> συνάπτειν, *applicare* (noun *συναφή*, *applicatio*) is used of planets which are on or are closely approaching the same meridian. *κόλλησις* is a similar term. "Separation,"

happen to have familiarity in two or more of the aforesaid ways with the places in which they are found ; for then their power is most increased in effectiveness by the similarity and co-operation of the kindred property of the signs which contain them. They say they "rejoice"<sup>1</sup> when, even though the containing signs have no familiarity with the stars themselves, nevertheless they have it with the stars of the same sect ; in this case the sympathy arises less directly. They share, however, in the similarity in the same way ; just as, on the contrary, when they are found in alien regions belonging to the opposite sect, a great part of their proper power is paralysed, because the temperament which arises from the dissimilarity of the signs produces a different and adulterated nature.

#### 24. *Of Applications and Separations and the Other Powers.*

In general those which precede<sup>2</sup> are said to "apply"<sup>3</sup> to those which follow, and those that follow to "be separated" from those that precede, when the interval between them is not great.<sup>4</sup> Such

*ἀπόρροια*, *defluxio*, on the contrary, refers to the movement apart of two bodies after "application." *ἀπόρροια* is also used by astrologers to designate the "emanations" of the heavenly bodies which affect the earth and its inhabitants, as for example in Vettius Valens, p. 160, 6-7 ; 249, 3 ; 270, 24 ff. ; 330, 19 ff.

<sup>4</sup> Ashmand says this is generally understood to mean, when the heavenly bodies are within each other's orbs (Saturn 10°, Jupiter 12°, Mars 7° 30', sun 17°, Venus 8°, Mercury 7° 30', moon 12° 30'). The anonymous commentator mentions 15° as the maximum distance (p. 51, ed. Wolf).

## PTOLEMY

τὸ τοιοῦτον ἐάν τε σωματικῶς ἐάν τε καὶ κατὰ τινὰ τῶν παραδεδομένων σχηματισμῶν συμβαίνει, πλὴν ὅτι γε πρὸς μὲν τὰς δι' αὐτῶν τῶν σωμάτων συναφὰς καὶ ἀπορροίας καὶ τὰ πλάτη παρατηρεῖν αὐτῶν χρήσιμον εἰς τὸ μόνον τὰς ἐπὶ τὰ αὐτὰ μέρη τοῦ διὰ μέσων εὐρισκομένας παρόδους παραδέχεσθαι. πρὸς δὲ τὰς διὰ τῶν συσχηματισμῶν<sup>1</sup> περιττόν ἐστι τὸ τοιοῦτον, πασῶν αἰεὶ τῶν ἀκτίνων ἐπὶ ταῦτά, τουτέστιν ἐπὶ τὸ κέντρον τῆς γῆς, φερομένων καὶ ὁμοίως πανταχόθεν συμβαλλουσῶν.

Ἐκ δὲ τούτων ἀπάντων εὐσύνοπτον ὅτι τὸ μὲν ποιὸν ἐκάστου τῶν ἀστέρων ἐπισκεπτέον ἕκ τε τῆς ἰδίας αὐτῶν φυσικῆς ἰδιοτροπίας καὶ ἔτι τῆς τῶν περιεχόντων δωδεκατημορίων, ἢ καὶ τῆς τῶν πρὸς τε τὸν ἥλιον καὶ τὰς γωνίας σχηματισμῶν κατὰ τὸν ἐκτεθειμένον ἡμῖν περὶ πάντων τούτων τρόπον· τὴν δὲ δύναμιν πρῶτον μὲν ἕκ τοῦ ἥτοι ἀνατολικούς αὐτούς εἶναι καὶ προσθετικούς ταῖς ἰδίαις κινήσεσι,

<sup>1</sup> τὰς διὰ τῶν συσχηματισμῶν] τὸν γινόμενον σχηματισμὸν NCam.

<sup>1</sup> That is, when the planets themselves come to the same meridian, as opposed to the conjunction of one planet with the ray projected by another from the sextile, quartile, or trine aspect.

<sup>2</sup> The ecliptic bisects the zodiac longitudinally. Planets, to "apply" in the "bodily" sense, must both be to the north, or the south, of it; that is, in the same latitude. Cf. the anonymous commentator (pp. 50-51, ed. Wolf).

<sup>3</sup> See the note on iii. 10 concerning the projection of rays (ἀκτινοβολία). To judge from the remarks of the anonymous

a relation is taken to exist whether it happens by bodily conjunction<sup>1</sup> or through one of the traditional aspects, except that with respect to the bodily applications and separations of the heavenly bodies it is of use also to observe their latitudes, in order that only those passages may be accepted which are found to be on the same side of the ecliptic.<sup>2</sup> In the case of applications and separations by aspect, however, such a practice is superfluous, because all rays always fall and similarly converge from every direction upon the same point, that is, the centre of the earth.<sup>3</sup>

From all this, then, it is easy to see that the quality of each of the stars must be examined with reference both to its own natural character and that also of the signs that include it, or likewise from the character of its aspects to the sun and the angles, in the manner which we have explained. Their power must be determined, in the first place, from the fact that they are either oriental and adding to their proper motion<sup>4</sup>

commentator, the thought is that, while the rays of planets closely approaching each other but in different latitudes would miss each other, the rays of those in aspect in any case mingle at their common meeting-place, the centre of the earth.

<sup>4</sup> The theory of epicycles assigns to each planet at least one epicycle, on which it moves from west to east, while the centre of the epicycle likewise moves from west to east on the orbit, or deferent. Thus when the planet is in the outer semicircle of its epicycle (away from the earth) both motions will be in the same direction and the planet will be "adding to its motion"; conversely on the inner semicircle (toward the earth) the motion on the epicycle is in the opposite direction to that on the deferent and the apparent speed of the planet is diminished.

## PTOLEMY

τότε γὰρ μάλιστα εἰσιν ἰσχυροί· ἢ δυτικούς καὶ ἀφαιρετικούς, τότε γὰρ ἀσθενεστέραν ἔχουσι τὴν ἐνέργειαν· ἔπειτα καὶ ἐκ τοῦ πως ἔχειν πρὸς τὸν ὀρίζοντα, μεσουρανοῦντες μὲν γὰρ ἢ ἐπιφερόμενοι τῷ μεσουρανήματι μάλιστα εἰσι δυναμικοί· δεύτερον δὲ ὅταν ἐπ' αὐτοῦ τοῦ ὀρίζοντος ὡσιν ἢ ἐπαναφέρονται, καὶ μᾶλλον ὅταν ἐπὶ τοῦ ἀνατολικοῦ, ἦττον δὲ ὅταν ὑπὸ γῆν μεσουρανώσιν ἢ ἄλλως συσχηματίζωνται τῷ ἀνατέλλοντι τόπῳ· μὴ οὕτω δὲ ἔχοντες ἀδύναμοι παντελῶς τυγχάνουσιν.

## TETRABIBLOS I. 24—II. 1

—for then they are most powerful—or occidental and diminishing in speed, for then their energy is weaker. Second, it is to be determined from their position relative to the horizon ; for they are most powerful when they are in mid-heaven or approaching it, and second when they are exactly on the horizon or in the succedent place ;<sup>1</sup> their power is greater when they are in the orient, and less when they culminate beneath the earth or are in some other aspect to the orient ; if they bear no aspect<sup>2</sup> at all to the orient they are entirely powerless.

### BOOK II.

#### 1. *Introduction.*

LET it be considered that thus far we have furnished in brief the most important details of the tabular exposition needful for the inquiry into particular prognostications. Let us now add in proper sequence the procedures for dealing in detail with those matters which lie within the limits of possibility of this kind of prognostication, holding everywhere to the natural method of exposition.

Since, then, prognostication by astronomical means is divided into two great and principal parts, and since the first and more universal is that which

<sup>1</sup>That is, the space of 30° (“place,” or “house”) immediately following, or rising next after, the horoscopic sign (*cf.* iii. 10, p. 273). This place is called the *ἐπιαναφορά* of the horoscope.

<sup>2</sup>That is, if they are disjunct (*cf.* c. 16).

54 ὅλα ἔθνη καὶ χώρας καὶ πόλεις λαμβανομένου, ὃ καλεῖται καθολικόν, δευτέρου δὲ καὶ εἰδικωτέρου τοῦ καθ' ἓνα ἕκαστον τῶν ἀνθρώπων, ὃ καὶ αὐτὸ καλεῖται γενεθλιαλογικόν, προσήκειν ἡγοῦμεθα περὶ τοῦ καθολικοῦ πρῶτον ποιήσασθαι τὸν λόγον, ἐπειδήπερ ταῦτα μὲν κατὰ μείζους καὶ ἰσχυροτέρας αἰτίας τρέπεσθαι πέφυκε μᾶλλον τῶν μερικῶς αποτελουμένων. ὑποπιπτουσῶν δὲ αἰεὶ τῶν ἀσθενεστέρων φύσεων ταῖς δυνατωτέραις καὶ τῶν κατὰ μέρος ταῖς καθ' ὅλου, παντάπασιν ἀναγκαῖον ἂν εἴη τοῖς προαιρουμένοις περὶ ἐνὸς ἑκάστου σκοπεῖν πολὺ πρότερον περὶ τῶν ὀλοσχερεστέρων περιειληφέναι.

Καὶ αὐτῆς δὲ τῆς καθολικῆς ἐπισκέψεως τὸ μὲν πάλιν κατὰ χώρας ὅλας λαμβάνεται, τὸ δὲ κατὰ πόλεις.<sup>1</sup> καὶ ἔτι τὸ μὲν κατὰ μείζους καὶ περιδικωτέρας περιστάσεις, οἷον πολέμων ἢ λιμῶν ἢ λοιμῶν<sup>2</sup> ἢ σεισμῶν ἢ κατακλυσμῶν καὶ τῶν τοιούτων· τὸ δὲ κατὰ ἐλάττους καὶ καιρικωτέρας,<sup>3</sup> οἷαί εἰσιν αἱ τῶν ἐτησίων ὥρων καὶ κατὰ τὸ μᾶλλον καὶ ἦττον ἀλλοιώσεις, περὶ τε ἀνέσεις ἢ ἐπιτάσεις χειμῶνων καὶ καυμάτων καὶ πνευμάτων εὐφορίας<sup>4</sup> τε καὶ ἀφορίας καὶ τὰ τοιαῦτα. προηγεῖται δὲ καὶ τούτων εἰκότως ἑκατέρου τό τε<sup>5</sup> κατὰ χώρας ὅλας καὶ τὸ κατὰ μείζους περι-  
55 στάσεις διὰ τὴν αὐτὴν αἰτίαν τῇ προειρημένῃ·

## TETRABIBLOS II. 1

relates to whole races, countries, and cities, which is called general, and the second and more specific is that which relates to individual men, which is called genethliological, we believe it fitting to treat first of the general division, because such matters are naturally swayed by greater and more powerful causes than are particular events. And since weaker natures always yield to the stronger, and the particular always falls under the general,<sup>1</sup> it would by all means be necessary for those who purpose an inquiry about a single individual long before to have comprehended the more general considerations.

Of the general inquiry itself, a part, again, is found to concern whole countries, and a part to concern cities;<sup>2</sup> and further, a part deals with the greater and more periodic conditions, such as wars, famines, pestilences, earthquakes, deluges, and the like; and another with the lesser and more occasional, as for example the changes in temperature<sup>3</sup> in the seasons of the year, and the variations of the intensity of storms, heat, and winds, or of good and bad crops, and so on. But in each of these cases, as is reasonable, procedure by entire countries and by more important conditions is preferred, for the same reason as before. And since in the examination

<sup>1</sup> Cf. i. 3.

<sup>2</sup> Or, as the variant reading has it, "to concern both countries and cities." See the *cr. n.*

<sup>3</sup> Literally, "variations of more and less."

## TETRABIBLOS II. 1-2

of these questions these two things particularly are taken into consideration, the familiarity of the signs of the zodiac and also of the stars with the several climes,<sup>1</sup> and the significances of heavenly bodies in their own proper regions<sup>2</sup> at a given time, manifested through the ecliptical conjunctions of the sun and moon and the transits<sup>3</sup> of the planets at rising and at their stationary periods, we shall first explain the natural reason for the aforesaid sympathies, and at the same time briefly survey the bodily and ethical peculiarities generally observed to belong to whole nations, which are not alien to the natural character of the stars and signs that are familiar to them.

### 2. *Of the Characteristics of the Inhabitants of the General Climes.*

The demarcation of national characteristics<sup>4</sup> is established in part by entire parallels and angles,<sup>5</sup> through their position relative to the ecliptic and the sun. For while the region which we inhabit is in one of the northern quarters, the people who live under the more southern parallels, that is, those

<sup>1</sup> Latitudes, or general regions determined by latitude.

<sup>2</sup> Such as houses (i. 17) or terms (i. 20-21).

<sup>3</sup> *πάροδοι*; the passage of a heavenly body through the zodiac.

<sup>4</sup> In the astrological ethnography which follows Ptolemy probably depends upon the Stoic Posidonius. Boll, *Studien*, pp. 181-238, enumerates many details in which, for this reason, Ptolemy here diverges from views expressed in the *Geography*.

<sup>5</sup> "Parallels" relate to latitude, *i.e.* position north or south; "angles" to position east or west.

μέχρι τοῦ θερινοῦ τροπικοῦ, κατὰ κορυφὴν λαμβανόντες τὸν ἥλιον καὶ διακαιόμενοι, μέλανες τὰ σώματα καὶ τὰς τρίχας οὐλοῖ τε καὶ δασεῖς καὶ τὰς μορφὰς συνεσπασμένοι καὶ τὰ μεγέθη συντετηγμένοι καὶ τὰς φύσεις θερμοὶ καὶ τοῖς ἡθεσιν ὡς ἐπὶ πᾶν ἄγριοι τυγχάνουσι διὰ τὴν ὑπὸ καύματος συνέχειαν τῶν οἰκήσεων, οὓς δὴ καλοῦμεν κοινῶς <sup>1</sup> Αἰθίοπας. καὶ οὐ μόνον αὐτοὺς ὀρώμεν οὕτως ἔχοντας ἀλλὰ καὶ τὸ περιέχον αὐτοὺς τοῦ ἀέρος κατάστημα καὶ τὰ ἄλλα ζῶα καὶ τὰ φυτὰ παρ' αὐτοῖς ἐμφανίζοντα τὴν διαπύρωσιν.<sup>2</sup>

## TETRABIBLOS II. 2

from the equator to the summer tropic, since they have the sun over their heads and are burned by it, have black skins and thick, woolly hair, are contracted in form and shrunken in stature, are sanguine of nature, and in habits are for the most part savage because their homes are continually oppressed by heat ; we call them by the general name Ethiopians. Not only do we see them in this condition, but we likewise observe that their climate and the animals and plants of their region plainly give evidence of this baking by the sun.

Those who live under the more northern parallels, those, I mean, who have the Bears over their heads, since they are far removed from the zodiac and the heat of the sun, are therefore cooled ; but because they have a richer share of moisture, which is most nourishing and is not there exhausted by heat, they are white in complexion, straight-haired, tall and well-nourished, and somewhat cold by nature ; these too are savage in their habits because their dwelling-places are continually cold. The wintry character of their climate, the size of their plants, and the wildness of their animals are in accord with these qualities. We call these men, too, by a general name, Scythians.

The inhabitants of the region between the summer tropic and the Bears, however, since the sun is

neither directly over their heads nor far distant at its noon-day transits, share in the equable temperature of the air, which varies, to be sure, but has no violent changes from heat to cold. They are therefore medium in colouring, of moderate stature, in nature equable, live close together, and are civilized in their habits. The southernmost of them<sup>1</sup> are in general more shrewd and inventive, and better versed in the knowledge of things divine because their zenith is close to the zodiac and to the planets revolving about it. Through this affinity the men themselves are characterized by an activity of the soul which is sagacious, investigative, and fitted for pursuing the sciences specifically called mathematical. Of them, again, the eastern group are more masculine, vigorous of soul, and frank in all things,<sup>2</sup> because one would reasonably assume that the orient partakes of the nature of the sun.<sup>3</sup> This region therefore is diurnal, masculine, and right-handed, even as we observe that among the animals too their right-hand parts are better fitted for strength and vigour. Those to the west are more feminine, softer of soul, and secretive, because this region, again, is lunar, for it is always in the west that the

<sup>1</sup>The anonymous commentator (p. 56, ed. Wolf) says that he means the Egyptians and the Chaldaeans, and is referring to the fact that they discovered astrology.

<sup>2</sup>This phrase (πάντα ἐκφαίνοντες) is contrasted with τὰ πολλὰ κρύπτοντες, below. The anonymous commentator says that some understood it to refer to the freedom of speech of the eastern group; others, to their gift of felicitous expression.

<sup>3</sup>*Cf.* i. 6; not only the sun, but also the oriental quadrant, is masculine.

moon emerges and makes its appearance after conjunction. For this reason it appears to be a nocturnal clime, feminine, and, in contrast with the orient, left-handed.

And now in each of these general regions certain special conditions of character and customs<sup>1</sup> naturally ensue. For as likewise, in the case of the climate, even within the regions that in general are reckoned as hot, cold, or temperate, certain localities and countries have special peculiarities of excess or deficiency by reason of their situation, height, lowness, or adjacency; and again, as some peoples are more inclined to horsemanship because theirs is a plain country, or to seamanship because they live close to the sea, or to civilization because of the richness of their soil, so also would one discover special traits in each arising from the natural familiarity of their particular climes with the stars in the signs of the zodiac. These traits, too, would be found generally present, but not in every individual. We must, then, deal with the subject summarily, in so far as it might be of use for the purpose of particular investigations.

<sup>1</sup>*I.e.* variations from the normal or general characteristics of the whole region.

## TETRABIBLOS II. 3

### 3. *Of the Familiarities between Countries and the Triplicities and Stars.*

Now of the four triangular formations recognized in the zodiac, as we have shown above,<sup>1</sup> the one which consists of Aries, Leo, and Sagittarius is north-western, and is chiefly dominated by Jupiter on account of the north wind, but Mars joins in its government because of the south-west wind. That which is made up of Taurus, Virgo, and Capricornus is south-eastern, and again is governed primarily by Venus on account of the south wind, but conjointly by Saturn because of the east wind. The one consisting of Gemini, Libra, and Aquarius is north-eastern and is governed primarily by Saturn because of the east wind, and conjointly by Jupiter because of the north wind. The triangle of Cancer, Scorpio, and Pisces is south-western and is governed primarily, because of the west wind, by Mars, who is joined by Venus as co-ruler on account of the south wind.

As this is so, and since our inhabited world is divided into four quarters,<sup>2</sup> equal in number to the triangles, and is divided latitudinally by our sea from the Straits of Hercules<sup>3</sup> to the Gulf of Issus and the mountainous ridge adjacent on the east,<sup>4</sup>

<sup>1</sup> Cf. i. 18.

<sup>2</sup> Cardanus, p. 181, diagrammatically figures the "inhabited world" as a trapezium, narrower at the top (north) than the bottom, and bounded by arcs; this is divided into quadrants by north-south and east-west lines. The "parts closer to the centre" are then marked off by lines joining the ends of the two latter, dividing each quadrant and producing 4 right-angled triangles at the centre.

<sup>3</sup> Straits of Gibraltar.

<sup>4</sup> Probably the Taurus range.

πρὸς ἀνατολὰς ὀρεινῆς ράχεως,<sup>1</sup> ὑφ' ὧν χωρίζεται τό τε νότιον καὶ τὸ βόρειον αὐτῆς μέρος, κατὰ δὲ μῆκος ὑπὸ τοῦ Ἀραβικοῦ κόλπου, διὰ καὶ τοῦ  
 60 Αἰγαίου πελάγους καὶ Πόντου καὶ τῆς Μαιώτιδος λίμνης, ὑφ' ὧν χωρίζεται τό τε ἀπηλιωτικὸν καὶ τὸ λιβυκὸν μέρος, γίνεται τεταρτημόρια τέτταρα, σύμφωνα τῇ θέσει τῶν τριγώνων· ἐν μὲν πρὸς βορρολίβα<sup>2</sup> τῆς ὅλης οἰκουμένης κείμενον, τὸ κατὰ τὴν Κελτογαλατίαν, ὃ δὴ κοινῶς Εὐρώπην καλοῦμεν· τούτῳ δὲ ἀντικείμενον καὶ πρὸς τὸν νοταπηλιώτην τὸ κατὰ τὴν ἑῶαν Αἰθιοπίαν, ὃ δὴ τῆς μεγάλης Ἀσίας νότιον μέρος ἂν καλοῖτο· καὶ πάλιν τὸ μὲν πρὸς βορραπηλιώτην τῆς ὅλης οἰκουμένης τὸ κατὰ τὴν Σκυθίαν, ὃ δὴ καὶ αὐτὸ βόρειον μέρος τῆς μεγάλης Ἀσίας γίνεται· τὸ δὲ ἀντικείμενον τούτῳ καὶ πρὸς λιβόνοτον ἄνεμον τὸ κατὰ τὴν ἑσπερίαν Αἰθιοπίαν, ὃ δὴ κοινῶς Λιβύην καλοῦμεν.

Πάλιν δὲ καὶ ἐκάστου τῶν προκειμένων τεταρτημορίων τὰ μὲν πρὸς τὸ μέσον μᾶλλον ἐσχηματισμένα τῆς ὅλης οἰκουμένης τὴν ἐναντίαν λαμβάνει θέσιν<sup>3</sup> πρὸς αὐτὸ τὸ περιέχον τεταρτημορίον, ὥσπερ<sup>4</sup> ἐκεῖνο πρὸς ὅλην τὴν οἰκουμένην, τοῦ τε κατὰ τὴν Εὐρώπην πρὸς βορρολίβα κείμενου τῆς ὅλης οἰκουμένης τὰ περὶ τὸ μέσον αὐτοῦ καὶ ἀντιγώνια πρὸς νοταπηλιώτην τοῦ αὐτοῦ τεταρτημορίου τὴν θέσιν ἔχοντα φαίνεται. καὶ ἐπὶ τῶν ἄλλων ὁμοίως, ὡς

## TETRABIBLOS II. 3

and by these its southern and northern portions are separated, and in longitude by the Arabian Gulf, the Aegean Sea, the Pontus,<sup>1</sup> and the Lake Maeotis, whereby the eastern and western portions are separated, there arise four quarters, and these agree in position with the triangles. The first quarter lies in the north-west of the whole inhabited world; it embraces Celtic Gaul<sup>2</sup> and we give it the general name Europe. Opposite this is the south-eastern quarter; this includes eastern Ethiopia,<sup>3</sup> which would be called the southern part of Greater Asia. Again, the north-eastern quarter of the whole inhabited world is that which contains Scythia, which likewise is the northern part of Greater Asia; and the quarter opposite this and toward the south-west wind, the quarter of western Ethiopia, is that which we call by the general term Libya.

Again, of each of the aforesaid quarters the parts which are placed closer to the centre of the inhabited world are placed in a contrary fashion with respect to the surrounding quarters, just as are the latter in comparison with the whole world; and since the European quarter lies in the north-west of the whole world, the parts about the centre, which are allied to the opposite angle, obviously are situated in the south-east part of the quarter. The

<sup>1</sup> The Pontus Euxinus, or Black Sea. The Lake Maeotis is the Sea of Azov.

<sup>2</sup> As opposed to Galatia in Asia Minor.

<sup>3</sup> The designation of India as "Eastern Ethiopia" is at variance with Ptolemy's *Geography*, and a mark of the influence of Posidonius (Boll, *Studien*, pp. 211-212). The distinction of two Ethiopias rests on the well-known Homeric passage, *Odyssey*, i. 22-24.

## PTOLEMY

ἐκ τούτων ἕκαστον τῶν τεταρτημορίων δυσὶ τοῖς ἀντικειμένοις τριγώνοις συνοικειοῦσθαι· τῶν μὲν 61 ἄλλων μερῶν πρὸς τὴν καθ' ὅλου πρόσνευσιν ἐφαρμοζομένων, τῶν δὲ περὶ τὸ μέσον πρὸς τὴν κατ' αὐτὸ τὸ μέρος ἀντικειμένην συμπαραλαμβανομένων πρὸς τὴν οἰκείωσιν, καὶ τῶν ἐν τοῖς οἰκείοις τριγώνοις τὴν οἰκοδεσποτίαν ἔχόντων ἀστέρων, ἐπὶ μὲν τῶν ἄλλων οἰκήσεων πάλιν αὐτῶν μόνων,<sup>1</sup> ἐπὶ δὲ τῶν περὶ τὸ μέσον τῆς οἰκουμένης κακείνων καὶ ἔτι τοῦ τοῦ Ἑρμοῦ διὰ τὸ μέσον καὶ κοινὸν αὐτὸν ὑπάρχειν τῶν αἰρέσεων.

Ἐκ δὲ τῆς<sup>2</sup> τοιαύτης διατάξεως τὰ μὲν ἄλλα μέρη τοῦ πρώτου τῶν τεταρτημορίων, λέγω δὲ τοῦ κατὰ τὴν Εὐρώπην, πρὸς βορρολίβα κείμενα τῆς ὅλης<sup>3</sup> οἰκουμένης, συνοικειοῦται μὲν τῷ βορρολιβυκῷ τριγώνῳ τῷ κατὰ τὸν Κριὸν καὶ Λέοντα καὶ Τοξότην, οἰκοδεσποτεῖται δὲ εἰκότως ὑπὸ τῶν κυρίων τοῦ τριγώνου Διὸς καὶ Ἄρεως ἐσπερίων. ἔστι δὲ ταῦτα καθ' ὅλα ἔθνη λαμβανόμενα Βρεττανία, Γαλατία, Γερμανία, Βασταρνία, Ἰταλία, Γαλλία, Ἀπουλία,

<sup>1</sup> Cardanus (p. 182) gives four reasons why Mercury governs these central portions; that he may have some dominion in the world; because the inhabitants of the central regions are more given to the arts and sciences, of which Mercury is the patron; because they are addicted to commerce, likewise in Mercury's field; and because Mercury's nature lies midway between those of the other four planets.

<sup>2</sup> That Jupiter and Mars must be in the occidental

## TETRABIBLOS II. 3

same holds of the other quarters, so that each of them is related to two oppositely situated triangles ; for while the other parts are in harmony with the general inclination of the quarter, the portions at the centre [of the world] share in familiarity with the opposite inclination, and, again, of the stars that govern in their own triangles, in all the other domiciles they alone govern, but in the parts about the centre of the world likewise the other group, and Mercury besides,<sup>1</sup> because he is mid-way between and common to the two sects.

Under this arrangement, the remainder of the first quarter, by which I mean the European quarter, situated in the north-west of the inhabited world, is in familiarity with the north-western triangle, Aries, Leo, and Sagittarius, and is governed, as one would expect, by the lords of the triangle, Jupiter and Mars, occidental.<sup>2</sup> In terms of whole nations these parts consist of Britain, (Transalpine) Gaul, Germany, Bastarnia,<sup>3</sup> Italy, (Cisalpine) Gaul, Apulia,

position is an additional requirement which does not appear in the original statement of the government of the triangles. Cardanus, p. 182, points out that in Ptolemy's scheme Jupiter governs the whole north, Venus the south, Saturn the east, and Mars the west, but in the first quadrant Mars and Jupiter dominate *non simpliciter, sed occidentales*, in the second, Saturn and Venus, not absolutely, but in oriental aspects, and so on. This, he says, is to display the variety of the customs of the nations, for a planet in oriental aspect is so different from the same planet occidental that practically it is two planets instead of one.

<sup>3</sup> The south-western part of Russia and southern Poland. Boll, *op. cit.*, p. 197, n. 2, points out that Hephaestion, who follows Ptolemy closely, and Proclus do not mention Bastarnia, and that the name may not have been in Ptolemy's original text.

Σικελία, Τυρρηνία, Κελτική, Ἰσπανία. εἰκότως δὲ τοῖς προκειμένοις ἔθνεσιν ὡς ἐπὶ πᾶν συνέπεσε,<sup>1</sup> διὰ τε τὸ ἀρχικὸν τοῦ τριγώνου καὶ τοὺς συνοικοδεσποτήσαντας ἀστέρας, ἀνυποτάκτοις<sup>2</sup> τε εἶναι καὶ φιλελευθέρους καὶ φιλόπλους καὶ φιλοπόνους καὶ πολεμικωτάτους καὶ ἡγεμονικοῖς καὶ καθαροῖς καὶ μεγαλοψύχοις· διὰ μέντοι τὸν ἐσπέριον σχηματισμὸν Διὸς καὶ Ἄρεως, καὶ ἔτι διὰ τὸ τοῦ προκειμένου <sup>62</sup>τριγώνου τὰ μὲν ἐμπρόσθια ἡρρενῶσθαι, τὰ δὲ ὀπίσθια τεθηλύσθαι, πρὸς μὲν τὰς γυναῖκας ἀζήλοις αὐτοῖς εἶναι συνέπεσε<sup>3</sup> καὶ καταφρονητικοῖς τῶν ἀφροδισίων, πρὸς δὲ τὴν τῶν ἀρρένων συνουσίαν κατακορεστέροις τε καὶ μᾶλλον ζηλοτύποις· αὐτοῖς δὲ τοῖς διατιθεμένοις μήτε αἰσχρὸν ἡγεῖσθαι τὸ γινόμενον μήτε ὡς ἀληθῶς ἀνάνδρους διὰ τοῦτο καὶ μαλακοῖς ἀποβαίνειν, ἔνεκεν τοῦ μὴ παθητικῶς διατίθεσθαι, συντηρεῖν δὲ τὰς ψυχὰς ἐπάνδρους καὶ κοινωνικὰς καὶ πιστὰς καὶ φιλοικεῖους καὶ εὐεργετικὰς. καὶ τούτων δὲ αὐτῶν τῶν χωρῶν Βρεττανία μὲν καὶ Γαλατία καὶ Γερμανία καὶ Βασταρνία μᾶλλον τῷ Κριῶ συνοικεῖονται καὶ τῷ τοῦ Ἄρεως· ὅθεν ὡς ἐπὶ πᾶν οἱ ἐν αὐταῖς ἀγριώτεροι καὶ αὐθαδέστεροι καὶ θηριώδεις τυγχάνουσιν. Sicily, Tyrrhenia,<sup>1</sup> Celtica,<sup>2</sup> and Spain. As one might expect, it is the general characteristic of these nations, by reason of the predominance of the triangle and the stars which join in its government, to be independent, liberty-loving, fond of arms, industrious, very warlike, with qualities of leadership, cleanly, and magnanimous. However, because of the occidental aspect of Jupiter and Mars, and furthermore because the first parts of the aforesaid triangle are masculine and the latter parts feminine,<sup>3</sup> they are without passion for women<sup>4</sup> and look down upon the pleasures of love, but are better satisfied with and more desirous of association with men. And they do not regard the act as a disgrace to the paramour, nor indeed do they actually become effeminate and soft thereby, because their disposition is not perverted, but they retain in their souls manliness, helpfulness, good faith, love of kinsmen, and benevolence. Of these same countries Britain, (Transalpine) Gaul, Germany, and Bastarnia are in closer familiarity with Aries and Mars. Therefore for the most part their inhabitants are fiercer, more headstrong, and bestial. But Italy, Apulia, (Cisalpine) Gaul, and Sicily have their familiarity with Leo and the

*Γαλατία* is used to designate Gaul proper, between the Rhine and the Pyrenees, and *Γαλλία* for northern Italy.

<sup>3</sup> All the signs of this triangle are masculine; *cf.* i. 17. Perhaps Ptolemy merely means that when Aries is rising Sagittarius will be occidental and therefore feminine; so Ashmand.

<sup>4</sup> This preference of the northern barbarians is charged against them by Aristotle and following him by Posidonius, Diodorus, Strabo, Athenaeus, Sextus Empiricus and others; *cf.* the instances collected by Bouhé-Leclercq, p. 340, n. 2, and the discussion in Boll, *Studien*, pp. 207-208.

οὔτοι καὶ εὐεργετικοὶ καὶ κοινώνικοι. sun; wherefore these peoples are more masterful, benevolent, and co-operative. Tyrrhenia, Celtica, and Spain are subject to Sagittarius and Jupiter, whence their independence, simplicity, and love of cleanliness. The parts of this quarter which are situated about the centre of the inhabited world, Thrace, Macedonia, Illyria, Hellas, Achaia,<sup>1</sup> Crete, and likewise the Cyclades, and the coastal regions of Asia Minor and Cyprus, which are in the south-east portion of the whole quarter, have in addition familiarity with the south-east triangle, Taurus, Virgo, and Capricornus, and its co-rulers Venus, Saturn, and Mercury. As a result the inhabitants of those countries are brought into conformity with these planets and both in body and soul are of a more mingled constitution. They too have qualities of leadership and are noble and independent, because of Mars; they are liberty-loving and self-governing, democratic and framers of law, through Jupiter; lovers of music and of learning, fond of contests and clean livers, through Venus; social, friendly to strangers, justice-loving, fond of letters, and very effective in eloquence, through Mercury; and they are particularly addicted to the performance of mysteries, because of Venus's occidental aspect. And again, part by part, those of this group who live in the

## TETRABIBLOS II. 3

Cyclades and on the shores of Asia Minor and Cyprus are more closely familiar to Taurus and Venus. For this reason they are, on the whole, luxurious, clean, and attentive to their bodies. The inhabitants of Hellas, Achaia, and Crete, however, have a familiarity with Virgo and Mercury, and are therefore better at reasoning, and fond of learning, and they exercise the soul in preference to the body. The Macedonians, Thracians, and Illyrians have familiarity with Capricorn and Saturn, so that, though they are acquisitive, they are not so mild of nature, nor social in their institutions.

Of the second quarter, which embraces the southern part of Greater Asia, the other parts, including India, Ariana, Gedrosia,<sup>1</sup> Parthia, Media, Persia, Babylonia, Mesopotamia, and Assyria, which are situated in the south-east of the whole inhabited world, are, as we might presume, familiar to the south-eastern triangle, Taurus, Virgo, and Capricorn, and are governed by Venus and Saturn in oriental aspects. Therefore one would find that the natures of their inhabitants conform with the temperaments governed by such rulers; for they revere the star of Venus under the name of Isis,<sup>2</sup> and that of Saturn as Mithras Helios. Most of them, too, divine future events; and among

<sup>1</sup> Gedrosia is modern Baluchistan, and Ariana lay north of it, between Parthia and the Indus.

<sup>2</sup> For this region it would have been more accurate to identify Venus with Astarte or Istar. It was, of course, the original home of the worship of Mithras.

them there exists the practice of consecrating the genital organs because of the aspect of the aforesaid stars, which is by nature generative. Further, they are ardent, concupiscent, and inclined to the pleasures of love; through the influence of Venus they are dancers and leapers and fond of adornment, and through that of Saturn luxurious liver. They carry out their relations with women<sup>1</sup> openly and not in secret, because of the planets' oriental aspect, but hold in detestation such relations with males. For these reasons most of them beget children by their own mothers, and they do obeisance to the breast, by reason of the morning rising of the planets and on account of the primacy of the heart, which is akin to the sun's power. As for the rest, they are generally luxurious and effeminate in dress, in adornment, and in all habits relating to the body, because of Venus. In their souls and by their predilection they are magnanimous, noble, and warlike, because of the familiarity of Saturn oriental. Part by part, again, Parthia, Media, and Persia are more closely familiar to Taurus and Venus; hence their inhabitants use embroidered clothing, which covers their entire body except the breast, and they are as a general thing luxurious and clean. Babylonia, Mesopotamia, and Assyria are familiar to Virgo and

## TETRABIBLOS II. 3

Mercury, and so the study of mathematics and the observation of the five planets are special traits of these peoples. India, Ariana, and Gedrosia have familiarity with Capricorn and Saturn; therefore the inhabitants of these countries are ugly, unclean, and bestial. The remaining parts of the quarter, situated about the centre of the inhabited world, Idumaea, Coelê Syria, Judaea, Phoenicia, Chaldaea, Orchinia, and Arabia Felix,<sup>1</sup> which are situated toward the north-west of the whole quarter, have additional familiarity with the north-western triangle, Aries, Leo, and Sagittarius, and, furthermore, have as co-rulers Jupiter, Mars, and Mercury. Therefore these peoples are, in comparison with the others, more gifted in trade and exchange; they are more unscrupulous, despicable cowards, treacherous, servile, and in general fickle, on account of the aspect of the stars mentioned. Of these, again, the inhabitants of Coelê Syria, Idumaea, and Judaea are more closely familiar to Aries and Mars, and therefore these peoples are in general bold, godless,<sup>2</sup> and scheming. The Phoenicians, Chaldaeans, and Orchinians have familiarity with Leo and the sun, so that

coast; Phoenicia the coastal strip north of Judaea and Samaria; Chaldaea, south-west of the Euphrates and north of the Arabian peninsula; what is meant by Orchinia is somewhat doubtful; and Arabia Felix is the south-western coastal region of the Arabian peninsula. In the *Geography*, v. 20, Chaldaea is treated merely as a part of Babylonia, not an entirely separate country, as here (cf. Boll, *Studien*, p. 205).

<sup>2</sup>The Jews, because of their monotheism and disregard of all pagan gods, were generally branded as atheists by their neighbours.

<sup>1</sup> Astrology indeed began in the ancient Babylonian and Assyrian kingdoms.

## TETRABIBLOS II. 3

they are simpler, kindly, addicted to astrology,<sup>1</sup> and beyond all men worshippers of the sun. The inhabitants of Arabia Felix are familiar to Sagittarius and Jupiter; this accounts for the fertility of the country, in accordance with its name, and its multitudes of spices, and the grace of its inhabitants and their free spirit in daily life, in exchange, and in business.

Of the third quarter, which includes the northern part of Greater Asia, the other parts, embracing Hyrcania, Armenia, Matiana, Bactriana, Casperia, Serica, Sauromatica, Oxiana, Sogdiana, and the regions in the north-east of the inhabited world,<sup>2</sup> are in familiarity with the north-eastern triangle, Gemini, Libra, and Aquarius, and are, as might be expected, governed by Saturn and Jupiter in oriental aspect. Therefore the inhabitants of these lands worship Jupiter and Saturn, have much riches and gold, and are cleanly and seemly in their living, learned and adepts in matters of religion, just and liberal in manners, lofty and noble in soul, haters of evil, and affectionate, and ready to die for their friends in a fair and holy cause. They are dignified and

<sup>2</sup> Of these Armenia lies south of the Caucasus between the Black Sea and the Caspian; Matiana and Hyrcania are around the south end of the Caspian, the former to the east and the latter to the west; Bactriana, Oxiana, and Sogdiana are still further east, around the upper courses of the Oxus; by Casperia is probably meant the region around the northern part of the Caspian Sea; Serica is China, or its western portion, and Sauromatica (called Sarmatia by the Romans) is the general name for Russia, here used of its Asiatic part. In the *Geography*, vi. 12, Ptolemy treats Oxiana as but one part of Sogdiana (Boll, *Studien*, p. 205).

καὶ καθάριοι καὶ περὶ τὰς ἐσθῆτας πολυτελεῖς, χαριστικοὶ τε καὶ μεγαλόφρονες, ἅπερ ὡς ἐπὶ πᾶν ὁ τοῦ Κρόνου καὶ ὁ τοῦ Διὸς ἀνατολικῶν συσχηματισμὸς ἀπεργάζεται.<sup>1</sup> καὶ τούτων δὲ πάλιν τῶν ἔθνῶν τὰ μὲν περὶ τὴν Ὑρκανίαν καὶ Ἀρμενίαν καὶ Ματιανὴν μᾶλλον συνοικεῖονται τοῖς τε Διδύμοις καὶ τῷ τοῦ Ἑρμοῦ· διόπερ εὐκίνητοτερα μᾶλλον καὶ ὑποπόνηρα. τὰ δὲ περὶ τὴν Βακτριανὴν καὶ Κασπηρίαν καὶ Σηρικὴν τῷ τε Ζυγῶ καὶ τῷ τῆς Ἀφροδίτης· ὅθεν οἱ κατέχοντες τὰς χώρας πλουσιώτατοι καὶ φιλόμουσοι καὶ μᾶλλον ἀβροδίαιτοι. τὰ δὲ περὶ τὴν Σαυροματικὴν καὶ τὴν Ὁξειανὴν καὶ Σουγδιανὴν τῷ τε Ὑδροχόῳ καὶ τῷ  
68 τοῦ Κρόνου· διὸ καὶ ταῦτα τὰ ἔθνη μᾶλλον ἀνήμερα καὶ αὐστηρὰ καὶ θηριώδη. τὰ δὲ λοιπὰ τούτου τοῦ τεταρτημορίου καὶ περὶ τὸ μέσον κείμενα τῆς ὅλης οἰκουμένης, Βιθυνία, Φρυγία, Κολχικὴ, Συρία, Κομμαγενή, Καππαδοκία, Λυδία, Λυκία,<sup>2</sup> Κιλικία, Παμφυλία, τὴν θέσιν ἔχοντα πρὸς λιβόνοτον αὐτοῦ τοῦ τεταρτημορίου, προσλαμβάνει τὴν συνοικεῖωσιν τοῦ νοτολιβυκοῦ τεταρτημορίου Καρκίνου καὶ Σκορπίου καὶ Ἰχθύων, καὶ συνοικοδεσπότας τὸν τε τοῦ Ἄρεως καὶ ἔτι τὸν τῆς Ἀφροδίτης καὶ τὸν τοῦ Ἑρμοῦ· διόπερ οἱ περὶ τὰς χώρας ταύτας σέβουσι μὲν ὡς ἐπὶ πᾶν τὴν Ἀφροδίτην ὡς μητέρα θεῶν, ποικίλοις καὶ ἐγχωρίοις ὀνόμασι προσαγορεύοντες, καὶ τὸν τοῦ Ἄρεως ὡς Ἄδωνιν ἢ ἄλλως πως πάλιν ὀνομάζοντες· καὶ μυστήριά τινα μετὰ θρηνηῶν ἀπο-

## TETRABIBLOS II. 3

pure in their sexual relations, lavish in dress, gracious and magnanimous; these things in general are brought about by Saturn and Jupiter in eastern aspects. Of these nations, again, Hyrcania, Armenia, and Matiana are more closely familiar to Gemini and Mercury; they are accordingly more easily stirred and inclined to rascality. Bactriana, Casperia, and Serica are akin to Libra and Venus, so that their peoples are rich and followers of the Muses, and more luxurious. The regions of Sauromatica, Oxiana, and Sogdiana are in familiarity with Aquarius and Saturn; these nations therefore are more ungentle, stern, and bestial. The remaining parts of this quarter, which lie close to the centre of the inhabited world, Bithynia, Phrygia, Colchica, Syria, Commagenê, Cappadocia, Lydia, Lycia, Cilicia, and Pamphylia,<sup>1</sup> since they are situated in the south-west of the quarter, have in addition familiarity with the south-western quarter, Cancer, Scorpio, and Pisces, and their co-rulers are Mars, Venus, and Mercury; therefore those who live in these countries generally worship Venus as the mother of the gods, calling her by various local names, and Mars as Adonis,<sup>2</sup> to whom again they give other names, and they celebrate in their honour certain mysteries accompanied

<sup>1</sup> These are all parts of Asia Minor.

<sup>2</sup> Ptolemy identifies Venus and Mars, who are coupled in Greek mythology, with the female and male divinities of this region worshipped under various names as the Mother of the Gods, Magna Mater, etc., and Attis, Adonis, etc.

by lamentations. They are exceedingly depraved servile, laborious, rascally, are to be found in mercenary expeditions, looting and taking captives, enslaving their own peoples, and engaging in destructive wars. And because of the junction of Mars and Venus in the Orient, since Mars is exalted in Capricorn, a sign of Venus's triangle, and Venus in Pisces, a sign of Mars's triangle, it comes about that their women display entire goodwill to their husbands; they are affectionate, home-keepers, diligent, helpful, and in every respect laborious and obedient. Of these peoples, again, those who live in Bithynia, Phrygia, and Colchica are more closely familiar to Cancer and the moon; therefore the men are in general cautious and obedient, and most of the women, through the influence of the moon's oriental and masculine aspect, are virile,<sup>1</sup> commanding, and warlike, like the Amazons, who shun commerce with men, love arms, and from infancy make masculine all their female characteristics, by cutting off their right breasts for the sake of military needs and baring these parts in the line of battle, in order to display the absence of femininity in their natures. The people of Syria, Commagenê, and Cappadocia are

## TETRABIBLOS II. 3

familiar to Scorpio and Mars ; therefore much boldness, knavery, treachery, and laboriousness are found among them. The people of Lydia, Cilicia, and Pamphylia have familiarity with Pisces and Jupiter ; these accordingly are more wealthy, commercial, social, free, and trustworthy in their compacts.

Of the remaining quarter, which includes what is called by the common name Libya,<sup>1</sup> the other parts, including Numidia, Carthage, Africa, Phazania, Nasamonitis, Garamantica, Mauritania, Gaetulia, Metagonitis,<sup>2</sup> and the regions situated in the south-west of the inhabited world, are related by familiarity to the south-western triangle, Cancer, Scorpio, and Pisces, and are accordingly ruled by Mars and Venus in occidental aspect. For this reason it befalls most of the inhabitants, because of the aforesaid junction of these planets, to be governed by a man and wife who are own brother and sister,<sup>3</sup> the man ruling the men and the woman the women ; and a succession of this sort is maintained. They are extremely ardent and disposed to commerce with women, so that even

<sup>1</sup> Along the Mediterranean coast, eastward from the Straits of Gibraltar, the regions are, first, Mauritania (of which Metagonitis is the portion east from the Straits), then Numidia, Africa (the Roman province, which includes Carthage), Tripolitana, Cyrenaica, Marnarica, and Egypt. The other nations mentioned are further inland and south of these, Gaetulia in the west, Garamantica and Phazania south of Tripoli, and Nasamonitis near Cyrenaica and Marnarica.

<sup>2</sup> Marriage between those of the same blood was a common practice in Hellenistic Egypt, including the royal family of the Ptolemies. Cf. Curmont, *L'Égypte des Astrologues* (Brussels, 1937), pp. 177-179.

## TETRABIBLOS II. 3

their marriages are brought about by violent abduction, and frequently their kings enjoy the *jus primae noctis* with the brides, and among some of them the women are common to all the men. They are fond of beautifying themselves and gird themselves with feminine adornments, through the influence of Venus; through that of Mars, however, they are virile of spirit, rascally, magicians, impostors, deceivers, and reckless. Of these people, again, the inhabitants of Numidia, Carthage, and Africa are more closely familiar to Cancer and the moon. They therefore are social, commercial, and live in great abundance. Those who inhabit Metagonitis, Mauritania, and Gaetulia are familiar to Scorpio and Mars; they are accordingly fiercer and very warlike, meat-eaters, very reckless, and contemptuous of life to such an extent as not even to spare one another. Those who live in Phazania, Nasamonitis, and Garamantica are familiar to Pisces and Jupiter; hence they are free and simple in their characters, willing to work, intelligent, cleanly, and independent, as a general rule, and they are worshippers of Jupiter as Ammon. The remaining parts of the quarter, which are situated near the centre of the inhabited world, Cyrenaica, Marmarica, Egypt, Thebais,<sup>1</sup> the Oasis,

<sup>1</sup> Upper Egypt. By "Egypt" he doubtless means Lower Egypt. Cyrenaica and Marmarica are to the west. Troglodytica lies along the west coast of the Red Sea and Azania about where is now French Somaliland. By Arabia he may mean Arabia Petraea, the Sinai Peninsula and vicinity. Parts of Troglodytica, too, were sometimes called Arabia. The Greater and Lesser Oases lie west of the Thebais.

## TETRABIBLOS II. 3

Troglodytica, Arabia, Azania, and Middle Ethiopia, which face the north-east of the whole quarter, have an additional familiarity with the north-eastern triangle Gemini, Libra, and Aquarius, and therefore have as co-rulers Saturn and Jupiter and, furthermore, Mercury. Accordingly those who live in these countries, because they all in common, as it were, are subject to the occidental rulership of the five planets, are worshippers of the gods, superstitious, given to religious ceremony and fond of lamentation; they bury their dead in the earth, putting them out of sight, on account of the occidental aspect of the planets; and they practice all kinds of usages, customs, and rites in the service of all manner of gods. Under command they are humble, timid, penurious, and long-suffering, in leadership courageous and magnanimous; but they are polygamous and polyandrous and lecherous, marrying even their own sisters, and the men are potent in begetting, the women in conceiving, even as their land is fertile. Furthermore, many of the males are unsound and effeminate of soul, and some even hold in contempt the organs of generation, through the influence of the aspect of the maleficent planets in combination with Venus occidental. Of these peoples the inhabitants of Cyrenaica and Marmarica, and particularly of Lower Egypt, are more closely familiar to Gemini and Mercury; on this account they are thoughtful and

## TETRABIBLOS II. 3

intelligent and facile in all things, especially in the search for wisdom and religion; they are magicians and performers of secret mysteries and in general skilled in mathematics.<sup>1</sup> Those who live in Thebais, the Oasis, and Troglodytica are familiar to Libra and Venus; hence they are more ardent and lively of nature and live in plenty. The people of Arabia, Azania, and Middle Ethiopia are familiar to Aquarius and Saturn,<sup>2</sup> for which reason they are flesh-eaters, fish-eaters, and nomads, living a rough, bestial life.

Let this be our brief exposition of the familiarities of the planets and the signs of the zodiac with the various nations, and of the general characteristics of the latter. We shall also set forth, for ready use, a list of the several nations which are in familiarity, merely noted against each of the signs, in accordance with what has just been said about them, thus:—

Aries: Britain, Gaul, Germania, Bastarnia; in the centre, Coelê Syria, Palestine, Idumaea, Judaea.

Taurus: Parthia, Media, Persia; in the centre, the Cyclades, Cyprus, the coastal region of Asia Minor.

<sup>1</sup> "Mathematics" (literally, "the studies") here means astrology; cf. the title of Sextus Empiricus' book *Πρὸς μαθηματικούς*, "Against the Astrologers."

<sup>2</sup> Some MSS. and Camerarius' second edition have "Jupiter" in place of "Saturn."

poles, appear to exert sympathy; furthermore, that, in the case of metropolitan cities, those regions of the zodiac are most sympathetic through which the sun and moon, and of the centres especially the horoscope, were passing at the first founding of the city, as in a nativity. But in cases in which the exact times of the foundations are not discovered, the regions are sympathetic in which falls the mid-heaven of the nativities of those who held office or were kings at the time.<sup>1</sup>

#### 4. *Method of Making Particular Predictions.*

After this introductory examination it would be the next task to deal briefly with the procedure of the predictions, and first with those concerned with general conditions of countries or cities. The method of the inquiry will be as follows: The first and most potent cause of such events lies in the conjunctions of the sun and moon at eclipse and the movements of the stars at the time. Of the prediction itself, one portion is regional;<sup>2</sup> therein we must foresee

<sup>1</sup> The procedure, therefore, is to treat a city like a person and cast its nativity, using instead of the time of birth the time of founding. If the latter is not accurately known, the astrologer should take the nativity of the founder, or other individual prominent in the enterprise, and observe where its mid-heaven falls.

<sup>2</sup> Ptolemy divides inquiries about cities and countries into four heads; what place is affected, the time and duration of the event, the generic classification of the event (*i.e.* what classes, *genera*, it will affect), and the quality, or nature, of the event itself. His terminology is Aristotelian. The next four chapters deal with the four phases of the inquiry.

χώραις ἢ πόλεσιν αἰ κατὰ μέρος ἐκλείψεις ἢ καὶ τῶν πλανωμένων αἰ κατὰ καιροὺς ἔμμονοι <sup>1</sup> στάσεις · αὐται δέ εἰσι Κρόνου τε καὶ Διὸς καὶ Ἄρεως, ὅταν στηρίζωσι · <sup>2</sup> ποιοῦνται γὰρ τότε τὰς <sup>3</sup> ἐπισημασίας · τὸ δέ τι χρονικόν, καθ' ὃ τὸν καιρὸν τῶν ἐπισημασιῶν καὶ τῆς παρατάσεως τὴν ποσότητα δεήσει προγινώσκειν · τὸ δέ τι γενικόν, καθ' ὃ προσήκει λαμβάνειν περὶ ποῖα τῶν γενῶν ἀποβήσεται τὸ σύμπτωμα · τελευταῖον δέ τὸ εἰδικόν, καθ' ὃ τὴν αὐτοῦ τοῦ ἀποτελεσθησομένου ποιότητα θεωρήσομεν.

for what countries or cities there is significance in the various eclipses or in the occasional regular stations of the planets, that is, of Saturn, Jupiter, and Mars, whenever they halt, for then they are significant. Another division of the prediction is chronological; therein the need will be to foretell the time of the portents and their duration. A part, too, is generic; through this we ought to understand with what classes the event will be concerned. And finally there is the specific aspect, by which we shall discern the quality of the event itself.

#### 5. *Of the Examination of the Countries Affected.*

We are to judge of the first portion of the inquiry, which is regional, in the following manner: In the eclipses of sun and moon<sup>1</sup> as they occur, particularly those more easily observed,<sup>2</sup> we shall examine the region of the zodiac in which they take place, and the countries in familiarity with its triangles, and in similar fashion ascertain which of the cities, either from their horoscope<sup>3</sup> at the time of their founding and the position of the luminaries at the time, or

<sup>1</sup> Johannes Laurentius Lydus (*De ostentis*, 9) deals with a system of prediction whereby eclipses of the sun refer to Asia and those of the moon to Europe. Ptolemy makes no such sweeping distinction.

<sup>2</sup> Ptolemy takes no account of eclipses not visible at the place concerned.

<sup>3</sup> That is, the sign in the ascendant, or horoscopic position, at that time.

## PTOLEMY

τότε ἡγεμονευόντων μεσουρανήσεως συμπάθειαν ἔχουσι πρὸς τὸ τῆς ἐκλείψεως δωδεκατημόριον. ἐφ' ὅσων δ' ἂν χωρῶν ἢ πόλεων εὐρίσκωμεν τὴν προκειμένην συνοικείωσιν, περὶ πάσας<sup>1</sup> μὲν ὡς ἐπὶ πᾶν ὑπονοητέον ἔσεσθαι τι σύμπτωμα, μάλιστα δὲ περὶ τὰς πρὸς αὐτὸ τὸ τῆς ἐκλείψεως δωδεκατημόριον λόγον ἔχούσας καὶ ἐν ὅσαις αὐτῶν ὑπὲρ γῆν οὐσα ἢ ἐκλειψις ἐφαίνετο.<sup>2</sup>

## TETRABIBLOS II. 5-6

from the mid-heaven of the nativity <sup>1</sup> of their then rulers, are sympathetic <sup>2</sup> to the zodiacal sign of the eclipse. And in whatsoever countries or cities we discover a familiarity of this kind, we must suppose that some event will occur which applies, generally speaking, to all of them, particularly to those which bear a relation to the actual zodiacal sign of the eclipse and to those of them in which the eclipse, since it took place above the earth, was visible.

### 6. *Of the Time of the Predicted Events.*

The second and chronological heading, whereby we should learn the times of the events signified and the length of their duration, we shall consider as follows. Inasmuch as the eclipses which take place at the same time are not completed in the same number of ordinary hours <sup>3</sup> in every locality, and since the same solar eclipses do not everywhere have the same degree of obscuration or the same time of duration, we shall first set down for the hour of the eclipse, in each of the related localities, and for the altitude of the pole, <sup>4</sup> centres, as in a nativity ;

<sup>1</sup>The mid-heaven was regarded by many, including Ptolemy, as the most important of the centres, or angles, even surpassing the horoscope itself in its significance in certain ways. Cf. Bouché-Leclercq, p. 271 (with n. 2).

<sup>2</sup>That is, bear an aspect to.

<sup>3</sup>Civil hours, twelfth parts of the day-time or the night-time. They vary in length according to the latitude and the time of the year. Cf. the note on horary periods, iii. 10 (p. 292, n. 2).

<sup>4</sup>That is, the latitude ; from this the centres or angles can be determined.

γενεσεως διαθήσομεν · ἔπειτα καὶ ἐπὶ πόσας<sup>1</sup> ἰσημερινὰς ὥρας ἐν ἐκάστη<sup>2</sup> παρατείνει τὸ ἐπισκίασμα τῆς  
 77 ἐκλείψεως · τούτων γὰρ ἐξετασθέντων ὅσας ἂν ἰσημερινὰς ὥρας εὖρωμεν, ἐφ' ἡλιακῆς μὲν ἐκλείψεως ἐπὶ τοσοῦτους ἐνιαυτοὺς παραμένειν ὑπονοήσομεν τὸ ἀποτελούμενον, ἐπὶ δὲ σεληνιακῆς ἐπὶ τοσοῦτους μῆνας, τῶν μέντοι καταρχῶν καὶ τῶν ὄλοσχερεστέρων ἐπιτάσεων<sup>3</sup> θεωρουμένων<sup>4</sup> ἐκ τῆς τοῦ ἐκλειπτικοῦ τόπου πρὸς τὰ κέντρα σχέσεως. πρὸς μὲν γὰρ τῷ ἀπηλιωτικῷ ὀρίζοντι ὁ τόπος ἐκπεσῶν τὴν τε καταρχὴν τοῦ συμπτώματος κατὰ τὴν πρώτην τετράμηνον ἀπὸ τοῦ χρόνου τῆς ἐκλείψεως σημαίνει καὶ τὰς ὄλοσχερεῖς<sup>5</sup> ἐπιτάσεις περὶ τὸ πρῶτον τριτημόριον τοῦ καθ' ὄλην<sup>6</sup> τὴν παράτασιν<sup>7</sup> χρόνου · πρὸς<sup>8</sup> δὲ τῷ μεσουρανήματι, κατὰ τε τὴν δευτέραν τετράμηνον καὶ τὸ μέσον τριτημόριον · πρὸς δὲ τῷ λιβυκῷ ὀρίζοντι, κατὰ τὴν τρίτην τετράμηνον καὶ τὸ ἔσχατον τριτημόριον. τῶν δὲ κατὰ μέρος ἀνέσεων καὶ ἐπιτάσεων ἀπὸ τε τῶν ἀνὰ μέσον συζυγιῶν, ὅταν κατὰ τῶν τὸ αἴτιον ἐμποιοῦντων τόπων ἢ τῶν συσχηματιζομένων τόπων αὐτοῖς συμπίπτωσι, καὶ

## TETRABIBLOS II. 6

secondly, how many equinoctial hours<sup>1</sup> the obscuration of the eclipse lasts in each. For when these data are examined, if it is a solar eclipse, we shall understand that the predicted event lasts as many years<sup>2</sup> as the equinoctial hours which we discover, and if a lunar eclipse, as many months. The nature of the beginnings<sup>3</sup> and of the more important intensifications<sup>4</sup> of the events, however, are deduced from the position of the place of the eclipse relative to the centres. For if the place of the eclipse falls on the eastern horizon, this signifies that the beginning of the predicted event is in the first period of four months from the time of the eclipse and that its important intensifications lie in the first third of the entire period of its duration; if on the mid-heaven, in the second four months and the middle third; if upon the western horizon, in the third four months and the final third. The beginnings of the particular abatements and intensifications of the event we deduce from the conjunctions which take place in the meantime,<sup>5</sup> if they occur in the significant regions or

<sup>1</sup> An equinoctial hour is the time measured by the passage of 15° of the equator ( $\frac{1}{24}$  of 360°) past the horizon or other fixed point.

<sup>2</sup> A distinction is made because solar and lunar eclipses are of very different lengths; a total lunar eclipse may last nearly two hours, compared with eight minutes in the case of the sun.

<sup>3</sup> *καταρχαί*, that is, when the predicted event is due.

<sup>4</sup> *ἐπιτάσεις*, "intensifications," as opposed to "relaxations"; a metaphor drawn from the tightening and loosening of the strings of a musical instrument.

<sup>5</sup> During the period of the predicted effect (Bouché-Leclercq, p. 351).

## TETRABIBLOS II. 6-7

the regions in some aspect to them, and also from the other movements of the planets, if those that effect the predicted event are either rising or setting or stationary or at evening rising, and are at the same time in some aspect to the zodiacal signs that hold the cause ; for planets when they are rising or stationary produce intensifications in the events, but when setting, and under the rays of the sun,<sup>1</sup> or advancing at evening, they bring about an abatement.

### 7. *Of the Class of those Affected.*

The third heading is that of generic classification, whereby one must determine what classes the event will affect. This is ascertained from the special nature and form of the zodiacal signs in which happen to be the places of the eclipses and in which are the heavenly bodies, planets and fixed stars alike, that govern both the sign of the eclipse and that of the angle preceding the eclipse. In the case of the planets we discover the rulership of these regions thus: The one which has the greatest number of relationships to both the regions aforesaid, that of the eclipse and that of the angle which follows it, both by virtue of the nearest visible applications or recessions, and by those of the aspects which bear a relation, and furthermore by rulership of the houses, triangles, exaltations, and terms, that planet

<sup>1</sup> Too near the sun to be visible ; *combustus* ; cf. Bouché-Leclercq, p. 111, n. 3. "Advancing" is the same as "adding to its motion" ; cf. above, p. 115, n. 4.

<sup>1</sup> The anonymous commentator on Ptolemy gives as examples of reasons for preferring one to another that it is

## TETRABIBLOS II. 7

alone will hold the dominance. However, if the same planet is not found to be both lord of the eclipse and of the angle, we must take together the two which have the greatest number of familiarities, as aforesaid, to either one of the regions, giving preference to the lord of the eclipse. And if several rivals be found on either count, we shall prefer for the domination the one which is closest to an angle, or is more significant, or is more closely allied by sect.<sup>1</sup> In the case of the fixed stars, we shall take the first one of the brilliant stars which signifies upon the preceding angle at the actual time of the eclipse, according to the nine kinds of visible aspects defined in our first compilation,<sup>2</sup> and the star which of the group visible at the time of the eclipse has either risen or reached meridian with the angle following the place of the eclipse.

When we have thus reckoned the stars that share in causing the event, let us also consider the forms of the signs of the zodiac in which the eclipse and the dominating stars as well happened to be, since from their character the quality of the classes affected is generally discerned. Constellations of human form, both in the zodiac and among the in the superior hemisphere, or is "adding to its motion," or rising, or if these characteristics appear in all the rivals, that it is of the proper sect.

<sup>2</sup> The reference is to the *Almagest*, viii. 4. They are πρωινός ἀπηλιώτης (matutine subsolar), πρωινὸν μεσουράνημα (matutine culmination), πρωινός λύψ (matutine setting), μεσημβρινός ἀπηλιώτης (meridional subsolar), μεσημβρινὸν μεσουράνημα (meridional culmination), μεσημβρινός λύψ (meridional setting), ὄψινός ἀπηλιώτης (vespertine subsolar), ὄψινὸν μεσουράνημα (vespertine culmination), and ὄψινός λύψ (vespertine setting).

## TETRABIBLOS II. 7

fixed stars, cause the event to concern the human race.<sup>1</sup> Of the other terrestrial signs,<sup>2</sup> the four-footed<sup>3</sup> are concerned with the four-footed dumb animals, and the signs formed like creeping things<sup>4</sup> with serpents and the like. Again, the animal<sup>5</sup> signs have significance for the wild animals and those which injure the human race; the tame signs concern the useful and domesticated animals, and those which help to gain prosperity, in consistency with their several forms; for example, horses, oxen, sheep, and the like. Again, of the terrestrial signs, the northern tend to signify sudden earthquakes and the southern unexpected rains from the sky. Yet again, those dominant regions that are in the form of winged creatures,<sup>6</sup> such as Virgo, Sagittarius, Cygnus, Aquila, and the like, exercise an effect upon winged creatures, particularly those which are used for human food, and if they are in the form of swimming things, upon water animals and fish. And of these, in the constellations pertaining to the sea,<sup>7</sup> such as Cancer, Capricorn, and the Dolphin, they influence the

Among the extra-zodiacal constellations might be cited Orion, Perseus, Andromeda, etc.

<sup>2</sup> Rhetorius, *loc. cit.*, names Aries, Taurus, Gemini, Leo, Virgo, Libra, Scorpio.

<sup>3</sup> Aries, Taurus, Leo, Sagittarius (Rhetorius, *loc. cit.*).

<sup>4</sup> To be sought among extra-zodiacal constellations, such as Draco, rather than the zodiac.

<sup>5</sup> θηριώδη; Taurus, Leo, and Scorpio, according to Rhetorius, *loc. cit.*

<sup>6</sup> Rhetorius, *loc. cit.*, names Virgo, Sagittarius, Pisces.

<sup>7</sup> Rhetorius, *loc. cit.*, designates as watery (ἐνδρα) Pisces, Cancer, Capricorn, Aquarius, and Sagittarius, of the zodiac.

## TETRABIBLOS II. 7

creatures of the sea and the sailing of fleets. In the constellations pertaining to rivers, such as Aquarius and Pisces, they concern the creatures of rivers and springs, and in Argo they affect both classes alike. Likewise stars in the solstitial<sup>1</sup> or equinoctial signs have significance in general for the conditions of the air and the seasons related to each of these signs, and in particular they concern the spring and things which grow from the earth. For when they are at the spring equinox they affect the new shoots of the arboreal crops, such as grapes and figs, and whatever matures with them; at the summer solstice, the gathering and storing of the crops, and in Egypt, peculiarly, the rising of the Nile; at the autumn solstice they concern the sowing, the hay crops, and such; and at the winter equinox the vegetables and the kinds of birds and fish most common at this season. Further, the equinoctial signs have significance for sacred rites and the worship of the gods; the solstitial signs, for changes in the air and in political customs; the solid signs,<sup>2</sup> for foundations and the construction of houses; the bicorporeal, for men and kings. Similarly, those which are closer to the orient at the time of the eclipse signify what is to be concerning the crops, youth, and foundations; those near the mid-heaven above the earth, concerning sacred rites, kings, and middle age; and

<sup>1</sup> Planets become feminized by the occidental position (cf. i. 6) and hence opposo the sun; in oriental position

those near the occident, concerning change of customs, old age, and those who have passed away.

To the question, how large a portion of the class involved will the event affect, the answer is supplied by the extent of the obscuration of the eclipses, and by the positions relative to the place of the eclipse held by the stars which furnish the cause. For when they are occidental to solar eclipses,<sup>1</sup> or oriental to lunar, they usually affect a minority; in opposition, a half; and the majority, if they are oriental to solar eclipses or occidental to lunar.

### 8. *Of the Quality of the Predicted Event.*

The fourth heading concerns the quality of the predicted event, that is, whether it is productive of good or the opposite,<sup>2</sup> and of what sort is its effect in either direction, in accordance with the peculiar character of the species. This is apprehended from the nature of the activity of the planets which rule the dominant places and from their combination both with one another and with the places in which they happen to be. For the sun and the moon are the marshals and, as it were,

they are masculinized and oppose the moon. Hence the effect is minimized. When, however, they work with the sun (in oriental position and masculine) or with the moon, the eclipse has a greater effect. *Cf.* Bouché-Leclercq, p. 353, n. 3.

<sup>2</sup> As Bouché-Leclercq (p. 355) points out, the natural tendency in antiquity would be to assume that any eclipse portends evil. Ptolemy's predilection for classification causes him to examine the question in the light of the nature and characters of the planets (*cf.* i. 5).

εἰσὶ τῶν ἄλλων, αὐτοὶ αἴτιοι γινόμενοι τοῦ τε κατὰ τὴν ἐνέργειαν ὄλου καὶ τῆς τῶν ἀστέρων οἰκοδεσποτίας καὶ ἔτι τῆς τῶν οἰκοδεσποτησάντων ἰσχύος ἢ ἀδρανείας. ἢ δὲ τῶν τὴν κυρίαν λαβόντων συγκρατικὴ θεωρία τὴν τῶν ἀποτελεσμάτων δείκνυσι ποιότητα.

- 83 Ἀρξόμεθα δὲ τῆς καθ' ἕκαστον τῶν πλανωμένων ποιητικῆς <sup>1</sup> ἰδιοτροπίας, ἐκεῖνο κοινῶς προεκθέμενοι ἔτι τῆς κεφαλαιώδους ὑπομνήσεως ἔνεκεν ὡς ὅταν καθ' ὄλου τινὰ λέγωμεν τῶν πέντε ἀστέρων τὴν κρᾶσιν καὶ τὸ ποιητικὸν τῆς ὁμοίας φύσεως ὑποληπτέον, εἴαν τε αὐτὸς ἐν τῇ ἰδίᾳ ἢ καταστάσει, εἴαν τε καὶ τῶν ἀπλανῶν τις ἢ τῶν τοῦ ζωδιακοῦ τόπων κατὰ τὴν οἰκείαν αὐτοῦ κρᾶσιν θεωρῆται· καθάπερ ἂν εἰ τῶν φύσεων καὶ τῶν ποιότητων αὐτῶν καὶ μὴ τῶν ἀστέρων ἐτύγχανον αἱ προσηγορίαι καὶ ὅτι ἐν ταῖς συγκράσεσι πάλιν οὐ μόνον τὴν πρὸς ἀλλήλους τῶν πλανωμένων μίξιν δεῖ σκοπεῖν, ἀλλὰ καὶ τὴν πρὸς τοὺς τῆς αὐτῆς φύσεως κεκοινωνηκότας ἢτοι ἀπλανεῖς ἀστέρας ἢ τόπους τοῦ ζωδιακοῦ κατὰ τὰς ἀποδεδειγμένας αὐτῶν πρὸς τοὺς πλάνητας συνοικειώσεις.

Ὁ μὲν οὖν τοῦ Κρόνου ἀστήρ μόνος τὴν οἰκοδεσποτίαν λαβὼν καθ' ὄλου μὲν φθορᾶς τῆς κατὰ

<sup>1</sup> ποιητικῆς VMADeProc., φυσικῆς PLNCam.

<sup>1</sup> According to the anonymous commentator (p. 71, ed. Wolf), the reason why the luminaries exert such power is that they are the ones which submit to eclipse and thereby determine the places of eclipses and the rulers of these places.

<sup>2</sup> Cardanus, p. 201 : “. . . when he says, for example,

## TETRABIBLOS II. 8

leaders of the others ; for they are themselves responsible for the entirety of the power, and are the causes of the rulership of the planets, and, moreover, the causes of the strength or weakness of the ruling planets.<sup>1</sup> The comprehensive observation of the ruling stars shows the quality of the predicted events.

We shall begin with the characteristic active powers of the planets, one by one, first, however, making this general observation, as a summary reminder, that in general whenever we speak of any temperament of the five planets one must understand that whatever produces the like nature is also meant,<sup>2</sup> whether it be the planet itself in its own proper condition, or one of the fixed stars, or one of the signs of the zodiac, considered with reference to the temperament proper to it, just as though the characterizations were applied to the natures or the qualities themselves and not to the planets ; and let us remember that in the combinations, again, we must consider not only the mixture of the planets one with another, but also their combination with the others that share in the same nature, whether they be fixed stars or signs of the zodiac, by virtue of their affinities with the planets, already set forth.<sup>3</sup>

Saturn,<sup>4</sup> when he gains sole dominance, is in general the cause of destruction by cold, and in

that Saturn does this or that, he understands this to refer not only to Saturn but to any star, even a fixed star, that may be of Saturn's nature ; as those in Cetus and some in Orion " (cf. i. 9). Similarly signs of the zodiac, or terms, could thus substitute for the planets.

<sup>3</sup> *I.e.* in i. 9.

<sup>4</sup> *Cf.* i. 5. Saturn is one of the maleficent planets (*ibid.*).

particular, when the event concerns men, causes long illnesses, consumptions, withering, disturbances caused by fluids, rheumatisms, and quartan fevers, exile, poverty, imprisonment, mourning, fears, and deaths, especially among those advanced in age.<sup>1</sup> He is usually significant with regard to those dumb animals that are of use to man, and brings about scarcity of them, and the bodily destruction by disease of such as exist, so that the men who use them are similarly affected and perish. With regard to weather, he causes fearful cold, freezing, misty, and pestilential; corruption of the air, clouds, and gloom; furthermore, multitudes of snowstorms, not beneficial but destructive, from which are produced the reptiles<sup>2</sup> harmful to man. As for the rivers and seas, in general he causes storms, the wreck of fleets, disastrous voyages, and the scarcity and death of fish, and in particular the high and ebb tides of the seas and in rivers excessive floods and pollution of their waters. As for the crops of the earth, he brings about want, scarcity, and loss, especially of those grown for necessary uses, either through worms or locusts or floods or cloud-burst or hail or the like, so that famine and the destruction of men thereby result.

<sup>1</sup> Saturn (Kronos) is pictured as an old man.

## TETRABIBLOS II. 8

When Jupiter <sup>1</sup> rules alone he produces increase in general, and, in particular, when the prediction is concerned with men, he makes fame and prosperity, abundance, peaceful existence, the increase of the necessities of life, bodily and spiritual health, and, furthermore, benefits and gifts from rulers, and the increase, greatness, and magnanimity of these latter; and in general he is the cause of happiness. With reference to dumb animals he causes a multitude and abundance of those that are useful to men and the diminution and destruction of the opposite kind. He makes the condition of the air temperate and healthful, windy, moist, and favourable to the growth of what the earth bears; he brings about the fortunate sailing of fleets, the moderate rise of rivers, abundance of crops, and everything similar.

Mars, when he assumes the rulership alone, is in general the cause of destruction through dryness and in particular, when the event concerns men, brings about wars, civil faction, capture, enslavement, uprisings, the wrath of leaders, and sudden deaths arising from such causes; moreover, fevers, tertian agues, raising of blood, swift and violent deaths, especially in the prime of life; similarly, violence,

## TETRABIBLOS II. 8

assaults, lawlessness, arson and murder, robbery and piracy. With regard to the condition of the air he causes hot weather, warm, pestilential, and withering winds, the loosing of lightning and hurricanes, and drought. Again, at sea he causes sudden shipwreck of fleets through changeable winds or lightning or the like; the failure of the water of rivers, the drying up of springs, and the tainting of potable waters. With reference to the necessities produced upon the earth for human use, he causes a scarcity and loss of dumb animals and of things which grow from the earth, and the loss of crops by drying as the result of hot weather, or by locusts, or by the beating of the winds, or by burning in places of storage.

Venus, when she becomes sole ruler of the event, in general brings about results similar to those of Jupiter, but with the addition of a certain agreeable quality; in particular, where men are concerned, she causes fame, honour, happiness, abundance, happy marriage, many children, satisfaction in every mutual relationship, the increase of property, a neat and well conducted manner of life, paying honour to those things which are to be revered; further, she is the cause of bodily health, alliances with the leaders, and elegance of rulers; as to the winds of the air, of temperateness and settled conditions of moist and

## TETRABIBLOS II. 8

very nourishing winds, of good air, clear weather, and generous showers of fertilizing waters; she brings about the fortunate sailing of fleets, successes, profits, and the full rising of rivers; of useful animals and the fruits of the earth she is the preëminent cause of abundance, good yields, and profit.

Mercury, if he gains the rulership, is, generally speaking, in nature like whatever of the other planets may be associated with him. In particular, he is above all stimulating, and in predictions concerning men is keen and very practical, ingenious in any situation; but he causes robbery, theft, piracy, and assault, and furthermore, brings about unsuccessful voyaging when he is in aspect with the maleficent planets, and occasions diseases of dryness, quotidian agues, coughs, raising, and consumption. He is the cause of events taking place which concern the priestly code, the worship of the gods, the royal revenues, and of change in customs and laws, from time to time, in consistency with his association with the other planets on each occasion. With reference to the air, since he is very dry and swift on account of his nearness to the sun, and the speed of his revolution, he is particularly apt to arouse irregular, fierce, and changeable winds, and, as might be expected, thunder, hurricanes, chasms in the earth, earthquakes, and lightning; sometimes by these

## TETRABIBLOS II. 8

means he causes the destruction of useful animals and plants. At setting he diminishes waters and rivers, at rising fills them.

Such are the effects produced by the several planets, each by itself and in command of its own nature. Associated, however, now with one and now with another, in the different aspects, by the exchange of signs,<sup>1</sup> and by their phases with reference to the sun,<sup>2</sup> and experiencing a corresponding tempering of their powers, each produces a character, in its effect, which is the result of the mixture of the natures that have participated, and is complicated. It is of course a hopeless and impossible task to mention the proper outcome of every combination and to enumerate absolutely all the aspects of whatever kind, since we can conceive of such a variety of them. Consequently questions of this kind would reasonably be left to the enterprise and ingenuity of the mathematician,<sup>3</sup> in order to make the particular distinctions.

It is needful to observe what affinity exists between the planets which govern the prediction and the countries or the cities for which the event is signified. For if the ruling planets are beneficent, and have familiarity with the subjects affected, and are not overcome<sup>4</sup> by planets of the opposite sect, they more powerfully produce the benefits natural to them ;

<sup>3</sup> *μαθηματικός* is here used to mean "astrologer," as for example at the very end of the *Tetrabiblos* (p. 458, l. 21).

<sup>4</sup> *καθυπερέρησις*, *supereminencia*, exists when one planet is superior to another, or is to the right of another in the astrological sense (*i.e.* preceding it in the direction of the diurnal movement of the heavens). Cf. Bouché-Leclercq, p. 250.

<sup>1</sup> A geniture (horoscope, nativity) of any individual or event has as its point of departure the horoscope in the proper sense, i.e. the degree of the ecliptic which is rising

even as, when they bear no familiarity, or are overcome by their opposites, they are less helpful. But when they are of the injurious temperament and govern the prediction, if they have familiarity with the subjects affected or are overcome by the opposite sect, they do less harm; but if they are neither lords of the countries nor are overcome by the planets that have familiarity with those countries, they exert all the more intensely the destructiveness of their temperament. Usually, however, those men are affected by the more universal ills who in their own genitures happen to have the most essential places,<sup>1</sup> by which I mean those of the luminaries or of the angles,<sup>2</sup> the same as those that furnish the cause of the general misfortunes, that is, the places of the eclipses or the places directly opposite. Of these the positions most dangerous and hardest to avoid are those in which either of their luminaries is in possession of the very degree of the place of the eclipse, or the degree opposite.

### 9. *Of the Colours of Eclipses, Comets, and the Like.*

For the prediction of general conditions we must also observe the colours at the time of the eclipses,

above the horizon (in the ascendant) at the moment. This point determines a series of divisions of the ecliptic of 30° each, a duodecimal system superimposed upon that of the zodiacal signs and differing therefrom. These divisions are the "places" (also called "houses," somewhat ambiguously) of the geniture.

<sup>2</sup>The angles, or centres, of a geniture are the horoscope or orient, the superior mid-heaven (upper culmination), the occident, and the inferior mid-heaven (lower culmination). See Bouché-Leclercq, pp. 257-259.

## TETRABIBLOS II. 9

either those of the luminaries themselves, or those of the formations that occur near them, such as rods,<sup>1</sup> halos, and the like. For if they appear black or livid they signify the effects which were mentioned in connection with Saturn's nature ;<sup>2</sup> if white, those of Jupiter ; if reddish, those of Mars ; if yellow, those of Venus ; and if variegated, those of Mercury. If the characteristic colour appears to cover the whole body of the luminary or the whole region surrounding it, the predicted event will affect most of the parts of the countries ; but if it is in any one part, it will affect only that part against which the phenomenon is inclined.

We must observe, further, for the prediction of general conditions, the comets<sup>3</sup> which appear either at the time of the eclipse or at any time whatever ; for instance, the so-called "beams," "trumpets," "jars," and the like,<sup>4</sup> for these naturally produce the effects peculiar to Mars and to Mercury—wars, hot weather, disturbed conditions, and the accompaniments of these ; and they show, through the parts of the zodiac in which their heads appear and through the directions in which the shapes of their tails point,

<sup>2</sup> Cf. i. 4, for the powers of Saturn and the other planets.

<sup>3</sup> Cf. Boll-Bezold-Gundel, pp. 51, 129 ; who quote *Julius Caesar*, ii. 2, "When beggars die, then are no comets seen ; the heavens themselves blaze forth the death of princes."

<sup>4</sup> Other astrologers and non-astrological writers classified the comets much more elaborately by their shapes and their associations with the planets, of which they were supposed to be the fiery missiles ; Ptolemy is much more conservative in what he says. See Bouché-Leclercq, pp. 358-359, and for a more detailed ancient account Hephaestion of Thebes, pp. 97, 31—99, 22 (ed. Engelbrecht).

σχήματα τῆς κόμης προσνεύσεων τοὺς τόπους οἷς ἐπισκήπτουσι τὰ συμπτώματα · διὰ δὲ τῶν αὐτῆς τῆς συστάσεως ὡσπερ μορφώσεων τὸ εἶδος τοῦ ἀποτελέσματος καὶ τὸ γένος περὶ ὃ τὸ πάθος ἀποβήσεται · 91 διὰ δὲ τοῦ χρόνου τῆς ἐπιμονῆς τὴν παράτασιν τῶν συμπτωμάτων · διὰ δὲ τῆς πρὸς τὸν ἥλιον σχέσεως καὶ<sup>1</sup> τὴν καταρχήν, ἐπειδήπερ ἑῷοι μὲν ἐπὶ πολὺ φαινόμεναι τάχιον ἐπισημαίνουσιν, ἑσπέριοι δὲ βράδιον.

## TETRABIBLOS II. 9-10

the regions upon which the misfortunes impend. Through the formations, as it were, of their heads they indicate the kind of the event and the class upon which the misfortune will take effect ; through the time which they last, the duration of the events ; and through their position relative to the sun likewise their beginning ; for in general their appearance in the orient betokens rapidly approaching events and in the occident those that approach more slowly.

### 10. *Concerning the New Moon of the Year.*

Now that we have described the procedure of prediction about the general states of countries and cities, it would remain to mention matters of greater detail ; I refer to events that happen yearly in connection with the seasons. In the investigation of this subject it would be appropriate first to define the so-called new moon of the year.<sup>1</sup> That this should properly be the beginning of the sun's circular course in each of his revolutions is plain from the thing itself, both from its power and from its name. To be sure, one could not conceive what starting-point to assume in a circle, as a general proposition ; but in the circle through the middle of the zodiac one would properly take as the only beginnings the points determined by the equator and the tropics, that is, the two equinoxes and the two solstices. Even then, however, one would still

<sup>1</sup>The new moon closest to the first of the year, as explained later.

τεττάρων ὡς προηγουμένω χρήσαιο. κατὰ μὲν οὖν τὴν ἀπλὴν καὶ κυκλικὴν φύσιν οὐδὲν αὐτῶν ἔστιν ὡς ἐπὶ μιᾶς ἀρχῆς προηγούμενον· κέχρηται 92 δὲ οἱ περὶ τούτων γράψαντες, ἔν τι<sup>1</sup> ὑποτιθέμενοι διαφόρως, ἐκάστῳ τῶν τεττάρων ὡς ἀρχὴν κατὰ τινὰς οἰκειοῦς λόγους καὶ φυσικὰς συμπαθείας<sup>2</sup> ἐνεχθέντες. καὶ γὰρ ἔχει τι τῶν μερῶν τούτων ἕκαστον ἐξαιρετόν ἀφ' οὗ ἂν ἀρχὴ καὶ νέον ἔτος εἰκότως νομίζοιτο· τὸ μὲν ἑαρινὸν ἰσημερινὸν διὰ τε τὸ πρῶτως τότε μείζονα τὴν ἡμέραν τῆς νυκτὸς ἄρχεσθαι γίνεσθαι καὶ διὰ τὸ τῆς ὑγρᾶς ὥρας εἶναι, ταύτην δὲ τὴν φύσιν, ὡς καὶ πρότερον ἔφαμεν, ἀρχομέναις ταῖς γενέσεσι πλείστην ἐνυπάρχειν· τὸ δὲ θερινὸν τροπικὸν διὰ τὸ κατ' αὐτὸ τὴν μεγίστην ἡμέραν ἀποτελεῖσθαι, παρὰ δὲ Αἰγυπτίοις καὶ τὴν τοῦ Νείλου ἀνάβασιν καὶ κυνὸς ἄστρου ἐπιτολὴν ἐπισημαίνειν· τὸ δὲ μετοπωρινὸν ἰσημερινὸν<sup>3</sup> διὰ τὸ γεγονέναι πάντων ἤδη τῶν καρπῶν συγκομιδὴν, τότε δὲ ἀπ' ἄλλης ἀρχῆς τὸν τῶν ἐσομένων σπόρον καταβάλλεσθαι· τὸ δὲ χειμερινὸν τροπικὸν διὰ τὸ πρῶτον<sup>4</sup> ἄρχεσθαι τότε τὸ μέγεθος τῆς ἡμέρας ἀπὸ μειώσεως αὐξήσιν λαμβάνειν. οἰκειότερον δέ μοι δοκεῖ καὶ φυσικώτερον πρὸς τὰς ἐνιαυσίους ἐπισκέψεις ταῖς τέτταρσιν ἀρχαῖς χρῆσθαι, παρατηροῦντας

## TETRABIBLOS II. 10

be at a loss which of the four to prefer. Indeed, in a circle, absolutely considered, no one of them takes the lead, as would be the case if there were one starting-point, but those who have written on these matters have made use of each of the four,<sup>1</sup> in various ways assuming some one as the starting-point, as they were led by their own arguments and by the natural characteristics of the four points. This is not strange, for each of these parts has some special claim to being reasonably considered the starting-point and the new year. The spring equinox might be preferred because first at that time the day begins to be longer than the night and because it belongs to the moist season, and this element, as we said before,<sup>2</sup> is chiefly present at the beginning of nativities; the summer solstice because the longest day occurs at that time and because to the Egyptians it signifies the flooding of the Nile and the rising of the dog star; the fall equinox because all the crops have by then been harvested, and a fresh start is then made with the sowing of the seed of future crops; and the winter solstice because then, after diminishing, the day first begins to lengthen. It seems more proper and natural to me, however, to employ the four starting-points for investigations which deal with the year, observing the syzygies

<sup>1</sup> Bouché-Leclercq, p. 129, with n. 1, points out that the Egyptian year began with the rising of Sirius, which is close to Cancer; that Cancer was the horoscope in the so-called Egyptian "theme of the world" (the horoscope of the universe, in which the planets, etc., were in the positions which they occupied at the very beginning); but that after Posidonius Aries was definitely recognized as the starting-point of the zodiac.

of the sun and moon at new and full moon which most nearly precede them, and among these in particular the conjunctions at which eclipses take place, so that from the starting-point in Aries we may conjecture what the spring will be like, from that in Cancer the summer, from that in Libra the autumn, and from that in Capricorn the winter. For the sun creates the general qualities and conditions of the seasons, by means of which even those who are totally ignorant of astrology can foretell the future.<sup>1</sup>

Furthermore, we must take into consideration the special qualities of the signs of the zodiac to obtain prognostications of the winds and of the more general natures;<sup>2</sup> and the variations of degree from time to time are in general again shown by the conjunctions which take place at the aforesaid points and by the aspects of the planets to them, and in particular also by the conjunctions and full moons in the several signs and by the course of the planets. This might be called monthly investigation.

As it is proper that for this purpose there be enumerated the peculiar natural powers of the several signs to influence annual conditions, as well as those

<sup>1</sup> Cf. i. 2.

<sup>2</sup> The Latin versions interpret this sentence in substantially the way here shown. The Paraphrase of Proclus, however, understands it to mean that the sun governs the qualities of the signs, the winds, and "certain other general matters"; and the anonymous commentator also (p. 79, ed. Wolf) says, *προῦπακουστέον ὁ ἥλιος ποιεῖ*. By "the more general natures" doubtless are meant temperature and other things, besides the winds, that go to make up the weather.

of the several planets, we have already, in what precedes, explained the familiarity of the planets,<sup>1</sup> and of the fixed stars of like temperament,<sup>2</sup> with the air and the winds, as well as that of the signs, as wholes,<sup>3</sup> with the winds and seasons. It would remain to speak of the nature of the signs, part by part.

### 11. *Of the Nature of the Signs, Part by Part, and their Effect upon the Weather.*

Now the sign of Aries as a whole, because it marks the equinox, is characterized by thunder or hail, but, taken part by part, through the variation in degree that is due to the special quality of the fixed stars, its leading<sup>4</sup> portion is rainy and windy, its middle temperate, and the following part hot and pestilential. Its northern parts are hot and destructive, its southern frosty and chilly.

The sign of Taurus as a whole is indicative of both temperatures and is somewhat hot; but taken part by part, its leading portion, particularly near the Pleiades, is marked by earthquakes, winds, and mists; its middle moist and cold, and its following

<sup>1</sup> i. 4 and 18.

<sup>2</sup> i. 9.

<sup>3</sup> Cf. the chapter on the triangles, i. 18.

<sup>4</sup> Ptolemy characterizes three parts of each sign, leading, middle, and following, besides the portions north and south of the ecliptic. The "leading" portion is so-called because it is the part which first rises above the horizon in the apparent diurnal movement of the heavens; the "following" portion is the last of the sign to appear. "Leading" degrees, or signs, are regarded as being to the right of the "middle" and the "following."

Ἰάδα πυρώδη καὶ κεραυνώδη καὶ ἀστραπῶν ποιητικά· τὰ δὲ βόρεια εὐκράτα, τὰ δὲ νότια κινητικά καὶ ἄτακτα.

Τὸ δὲ τῶν Διδύμων δωδεκατημόριον καθ' ὅλου μὲν ἐστὶν εὐκρασίας ποιητικόν, κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ δίγγρα καὶ φθαρτικά, τὰ δὲ μέσα εὐκράτα, τὰ δὲ ἐπόμενα μεμιγμένα καὶ ἄτακτα· τὰ δὲ βόρεια πνευματώδη καὶ σεισμοποιά, τὰ δὲ νότια ξηρὰ καὶ καυσώδη.

Τὸ δὲ τοῦ Καρκίνου δωδεκατημόριον καθ' ὅλου μὲν 95 ἐστὶν εὐδίων καὶ θερμόν, κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ καὶ κατὰ τὴν Φάτνην πνιγώδη καὶ σεισμοποιὰ καὶ ἀχλυώδη, τὰ δὲ μέσα εὐκράτα, τὰ δὲ ἐπόμενα πνευματώδη· τὰ δὲ βόρεια καὶ τὰ νότια ἔκπυρα<sup>1</sup> καὶ καυσώδη.

Τὸ δὲ τοῦ Λέοντος δωδεκατημόριον καθ' ὅλου μὲν ἐστὶ καυματώδες καὶ πνιγώδες, κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ πνιγώδη καὶ λοιμικά, τὰ δὲ μέσα εὐκράτα, τὰ δὲ ἐπόμενα ἔνικμα<sup>2</sup> καὶ φθοροποιά· τὰ δὲ βόρεια κινητικά καὶ πυρώδη, τὰ δὲ νότια δίγγρα.

Τὸ δὲ τῆς Παρθένου δωδεκατημόριον καθ' ὅλου μὲν ἐστὶ δίγγρα καὶ βροντώδες, κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ θερμότερα καὶ φθαρτικά, τὰ δὲ μέσα εὐκράτα, τὰ δὲ ἐπόμενα ὑδατώδη· τὰ δὲ βόρεια πνευματώδη, τὰ δὲ νότια εὐκράτα.

## TETRABIBLOS II. 11

portion, near the Hyades, fiery and productive of thunder and lightning. Its northern parts are temperate, its southern unstable and irregular.

The sign of Gemini as a whole is productive of an equable temperature, but taken part by part its leading portion is wet and destructive, its middle temperate, and its following portion mixed and irregular. Its northern parts are windy and cause earthquakes; its southern parts dry and parching.

The sign of Cancer as a whole is one of fair, warm weather; but, part by part, its leading portion and the region of Praesepe is stifling, productive of earthquakes, and misty; its middle temperate, and its following parts windy. Its northern and southern parts are fiery and parching.<sup>1</sup>

The sign of Leo as a whole is hot and stifling; but, part by part, its leading portion is stifling and pestilential, its middle part temperate, and its following portion wet and destructive. Its northern parts are unstable and fiery, its southern parts moist.

The sign of Virgo as a whole is moist and marked by thunder-storms; but, taken part by part, its leading portion is rather warm and destructive, its middle temperate, and its following part watery. Its northern parts are windy and its southern parts temperate.

<sup>1</sup>“Fiery, destructive, and parching,” according to certain MSS. See the critical note.

Τὸ δὲ τῶν Χηλῶν δωδεκατημόριον καθ' ὅλου μὲν ἐστὶ τρεπτικὸν καὶ μεταβολικόν,<sup>1</sup> κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ καὶ τὰ μέσα ἐστὶν εὐκρατα, τὰ δὲ ἐπόμενα ὑδατώδη· τὰ δὲ βόρεια πνευματώδη, τὰ δὲ νότια ἔνικμα καὶ λοιμικά.

Τὸ δὲ τοῦ Σκορπίου δωδεκατημόριον καθ' ὅλου μὲν ἐστὶ βροντώδες καὶ πυρῶδες, κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ νιφετώδη, τὰ δὲ μέσα εὐκρατα, τὰ δὲ ἐπόμενα σεισμώδη· τὰ δὲ βόρεια καυσώδη, τὰ δὲ νότια ἔνικμα.

96 Τὸ δὲ τοῦ Τοξότου δωδεκατημόριον καθ' ὅλου μὲν ἐστὶ πνευματώδες, κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ δίγγρα, τὰ δὲ μέσα εὐκρατα, τὰ δὲ ἐπόμενα πυρώδη· τὰ δὲ βόρεια πνευματώδη, τὰ δὲ νότια κάθυγρα καὶ μεταβολικά.

Τὸ δὲ τοῦ Αἰγόκερω δωδεκατημόριον καθ' ὅλου μὲν ἐστὶ κάθυγρον, κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ καυσώδη καὶ φθαρτικά, τὰ δὲ μέσα εὐκρατα, τὰ δὲ ἐπόμενα ὄμβρων κινητικά· τὰ δὲ βόρεια καὶ τὰ νότια κάθυγρα καὶ φθαρτικά.

Τὸ δὲ τοῦ Ὑδροχόου δωδεκατημόριον καθ' ὅλου μὲν ἐστὶ ψυχρὸν καὶ ὑδατώδες, κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ κάθυγρα, τὰ δὲ μέσα εὐκρατα, τὰ δὲ ἐπόμενα πνευματώδη· τὰ δὲ βόρεια καυσώδη, τὰ δὲ νότια νιφετώδη.

Τὸ δὲ τῶν Ἰχθύων δωδεκατημόριον καθ' ὅλου μὲν ἐστὶ ψυχρὸν καὶ πνευματώδες, κατὰ μέρος δὲ τὰ μὲν προηγούμενα αὐτοῦ εὐκρατα, τὰ δὲ μέσα κάθυγρα, τὰ δὲ ἐπόμενα καυσώδη· τὰ δὲ βόρεια πνευματώδη, τὰ δὲ νότια ὑδατώδη.

## TETRABIBLOS II. 11

The sign of Libra as a whole is changeable and variable ; but, taken part by part, its leading and middle portions are temperate and its following portion watery. Its northern parts are windy and its southern moist and pestilential.

The sign of Scorpio as a whole is marked by thunder and fire, but, taken part by part, its leading portion is snowy, its middle temperate, and its following portion causes earthquakes. Its northern parts are hot and its southern moist.

The sign of Sagittarius as a whole is windy ; but, taken part by part, its leading portion is wet, its middle temperate, and its following part fiery. Its northern parts are windy, its southern moist and changeable.

The sign of Capricorn as a whole is moist ; but, taken part by part, its leading portion is marked by hot weather and is destructive, its middle temperate, and its following part raises rain-storms. Its northern and southern portions are wet and destructive.

The sign of Aquarius as a whole is cold and watery ; but, taken part by part, its leading portion is moist, its middle temperate, its following part windy. Its northern portion brings hot weather and its southern clouds.

The sign of Pisces as a whole is cold and windy ; but, taken part by part, its leading portion is temperate, its middle moist, and its following portion hot. Its northern parts are windy and its southern watery.

<sup>1</sup> In the latter part of ii. 10. Cardanus, pp. 228-229, commenting on this chapter, says, after admiring the genius of Ptolemy, "For in this chapter he does five things. In the first place, he has declared the proper nature of each part of the year in general, which is predicted from the new moon or full moon preceding the ingress of the sun to the cardinal point. In the second . . . , the quality of each month from the new or full moon, following the ingress of the sun to the cardinal point. In the third

## TETRABIBLOS II. 12

### 12. *Of the Investigation of Weather in Detail.*

Now that these facts have been stated in introduction, the method of dealing with the significations in detail involves the following procedure. For one method is that which is more generally conceived, with relation to the quarters, which will demand, as we have said,<sup>1</sup> that we observe the new moons<sup>2</sup> or full moons which most nearly precede the solstitial and equinoctial signs, and that, as the degree of the new moon or of the full moon may fall in each latitude investigated, we dispose the angles as in a nativity.<sup>3</sup> It will then be necessary to determine the rulers of the place of the new moon or full moon and of the angle that follows it, after the fashion explained by us in the preceding sections dealing with eclipses,<sup>4</sup> and thus to judge of the general situation from the special nature of the

place, he tells us how to know the nature of the weather of the fourth part of each month . . . and this is discovered not only from new moons and full moons but also from the quarters. . . . In the fourth place, he shows us how to recognize each day the quality of the air . . . from the rising or setting of the bright stars. In the fifth he teaches us to learn that same thing hour by hour from the passage of the luminaries through the angles at the time." The "quarters" mentioned by Ptolemy are the quarters of the year, or of the zodiac.

<sup>2</sup>Literally "conjunctions" (*συνόδους*), but with special reference to those of the sun and moon; hence, "new moons."

<sup>3</sup>That is, determine the horoscopic point, mid-heaven, occident, etc., at the time of the conjunction and construct the horoscope for the event as though it were a birth.

<sup>4</sup>The reference is to ii. 4-8, especially c. 5, where the method of procedure is explained.

## PTOLEMY

<sup>1</sup> The signs are taken as marking the months, and the new or full moons first occurring while the sun is in the several signs (hence *following* the entrance of the sun into

## TETRABIBLOS II. 12

quarters, and determine the question of degree of intensification and relaxation from the nature of the ruling planets, their qualities, and the kinds of weather which they produce.

The second mode of procedure is based on the month. In this it will be necessary for us to examine in the same way the new moons or full moons that take place, in the several signs,<sup>1</sup> observing only this, that, if a new moon occurs nearest to the solstitial or equinoctial sign just past, we should use the new moons which take place as far as the next quadrant, and in the case of a full moon the full moons. It will be needful similarly that we observe the angles and the rulers of both the places, and especially the nearest appearances<sup>2</sup> of the planets, and their applications<sup>3</sup> and recessions, the peculiar properties of the planets and of their places, and the winds which are aroused both by the planets themselves and by the parts of the signs in which they chance to be ; still further, to what wind the latitude of the moon is inclined through the obliquity of the ecliptic. From all these facts, by means of the principle of prevalence, we may predict the general conditions of weather and the winds of the months.

The third step is to observe the even more minutely

the sign, as Cardanus says) are to be observed. However, if, for example, in predicting the weather for the first quarter (spring), a new moon had preceded the first of Aries and had been used in determining the prediction in the way just described, we are to use the new moons in Aries, Taurus, and Gemini for the monthly predictions of this quadrant ; if a full moon, the full moons.

<sup>2</sup> Or apparitions.

<sup>3</sup> See i. 24.

μασίας ἀνέσεων καὶ ἐπιτάσεων παρατηρεῖν. θεωρεῖται δὲ καὶ τοῦτο διὰ τε τῶν κατὰ μέρος τοῦ ἡλίου καὶ τῆς σελήνης συσχηματισμῶν, οὐ μόνον τῶν συνοδικῶν ἢ πανσεληνιακῶν ἀλλὰ καὶ τῶν κατὰ τὰς διχοτόμους, καταρχομένης ὡς ἐπὶ πᾶν τῆς κατὰ τὴν ἐπισημασίαν ἐναλλοιώσεως πρὸ τριῶν ἡμερῶν, ἐνίοτε δὲ καὶ μετὰ τρεῖς τῆς ἰσοστάθμου πρὸς τὸν ἥλιον ἐπιπορεύσεως, καὶ διὰ τοῦ καθ' ἐκάστην<sup>1</sup> τῶν τοιούτων<sup>2</sup> στάσεων ἢ καὶ τῶν ἄλλων, οἷον τριγώνων καὶ ἑξαγώνων, καὶ πρὸς τοὺς πλάνητας συσχηματισμοῦ. τούτων γὰρ ἀκολουθῶς τῇ φύσει καὶ ἡ τῆς ἐναλλοιώσεως ἰδιοτροπία καταλαμβάνεται συμφώνως ταῖς τε τῶν ἐπιθεωρούντων ἀστέρων καὶ ταῖς τῶν ζῳδίων πρὸς τε τὸ περιέχον καὶ τοὺς ἀνέμους φυσικαῖς συνοικειώσεσιν.

## TETRABIBLOS II. 12

detailed indications of relaxation and intensification.<sup>1</sup> This observation is based upon the configurations of the sun and the moon successively, not merely the new moons and full moons, but also the half moons, in which case the change signified generally has its beginning three days before, and sometimes three days after, the moon's progress matches that of the sun.<sup>2</sup> It is based also upon their aspects to the planets, when they are at each of the positions of this kind, or likewise others, such as trine and sextile. For it is in accordance with the nature of these that the special quality of the change is apprehended, in harmony with the natural affinities of the attending planets and of the signs of the zodiac for the ambient and the winds.

The day by day intensifications of these particular qualities are brought about chiefly when the more brilliant and powerful of the fixed stars make appearances, matutine or vespertine, at rising or setting, with respect to the sun.<sup>3</sup> For ordinarily they modulate the particular conditions to accord with their own natures, and none the less too when the luminaries are passing over one of the angles.

For the hour by hour intensifications and relaxations of the weather vary in response to such positions of the stars as these, in the same way that the ebb

<sup>1</sup> That is, in the predicted event. Ptolemy also uses the expression "the more or less" (*τὸ μᾶλλον ἢ ἥττον*) to refer to intensification and relaxation.

<sup>2</sup> *I.e.* conjunction.

<sup>3</sup> Heliacal risings and settings may be meant; but see also the list of configurations given in the note on ii. 7, p. 171.

Τὸν μὲν οὖν ἥλιον παρατηρητέον πρὸς μὲν τὰς ἡμερησίους καταστάσεις ἀνατέλλοντα, πρὸς δὲ τὰς νυκτερινὰς δύνοντα, πρὸς δὲ τὰς παρατεινούσας κατὰ τοὺς πρὸς τὴν σελήνην σχηματισμούς, ὡς ἐκάστου σχήματος τὴν μέχρι τοῦ ἑξῆς κατάστασιν ὡς ἐπὶ πᾶν προσημαίνοντος. καθαρὸς μὲν γὰρ καὶ ἀνεπισκόπητος καὶ εὐσταθὴς καὶ ἀνέφελος ἀνατέλλων ἢ δύνων εὐδαιωνῆς καταστάσεώς ἐστι δηλωτικός, ποικίλον δὲ τὸν κύκλον ἔχων ἢ ὑπόπυρρον ἢ ἀκτίνας ἐρυθρὰς ἀποπέμπων ἤτοι εἰς τὰ ἔξω ἢ

## TETRABIBLOS II. 12-13

and flow of the tide respond to the phases of the moon, and the changes in the air-currents are brought about especially at such appearances of the luminaries at the angles, in the direction of those winds towards which the latitude of the moon is found to be inclining. In every case, however, one should draw his conclusions on the principle that the universal and primary underlying cause takes precedence and that the cause of particular events is secondary to it, and that the force is most ensured and strengthened when the stars which are the lords of the universal natures are configured with the particular causes.

### 13. *Of the Significance of Atmospheric Signs.*

Observations of the signs that are to be seen around the sun, moon, and planets would also be useful for a foreknowledge of the particular events signified.

We must, then, observe the sun at rising to determine the weather by day and at setting for the weather at night, and its aspects to the moon for weather conditions of longer extent, on the assumption that each aspect, in general, foretells the condition up to the next. For when the sun rises or sets clear, unobscured, steady, and unclouded, it signifies fair weather ; but if its disk is variegated or reddish or sends out ruddy rays, either directly outward or turned back upon itself, or if it has the

ὡς ἐφ' <sup>1</sup> ἑαυτὸν κυκλουμένας <sup>2</sup> ἢ τὰ καλούμενα <sup>3</sup> παρήλια νέφη ἐξ ἑνὸς μέρους ἔχων ἢ σχήματα νεφῶν ὑπόκιρρα καὶ ὡσεὶ μακρὰς ἀκτῖνας ἀπομηκύνων, ἀνέμων σφοδρῶν ἐστὶ σημαντικὸς καὶ τοιούτων πρὸς ἅς ἂν γωνίας τὰ προειρημένα σημεῖα γίνηται. μέλας δὲ ἢ ὑπόχλωρος ἀνατέλλων ἢ δύνων μετὰ συννεφίας ἢ ἄλως ἔχων περὶ αὐτὸν καθ' ἑν μέρος ἢ ἐξ ἀμφοτέρων τῶν μερῶν παρήλια νέφη καὶ ἀκτῖνας ἢ ὑποχλώρους <sup>4</sup> ἢ μέλανας, χειμώνων <sup>101</sup> καὶ ὑετῶν ἐστὶ δηλωτικός.

Τὴν δὲ σελήνην τηρητέον ἐν ταῖς πρὸ τριῶν ἡμερῶν ἢ μετὰ τρεῖς παρόδοις τῶν τε συνόδων καὶ πανσελήνων καὶ διχοτόμων. λεπτή μὲν γὰρ καὶ καθαρὰ φαινομένη καὶ μηδὲν ἔχουσα περὶ αὐτήν, εὐδιεινῆς καταστάσεώς ἐστὶ δηλωτική· λεπτή δὲ καὶ ἐρυθρὰ καὶ ὄλον τὸν τοῦ ἀφωτίστου κύκλον ἔχουσα διαφανῆ καὶ ὑποκεκινημένον, ἀνέμων ἐστὶν ἐπισημαντική, καθ' ὧν ἂν <sup>5</sup> μάλιστα ποιῆται τὴν πρόσνευσιν· μέλαινα δὲ ἢ χλωρὰ <sup>6</sup> καὶ παχεῖα θεωρουμένη χειμώνων καὶ ὄμβρων ἐστὶ δηλωτική.

Παρατηρητέον δὲ καὶ τὰς περὶ αὐτὴν γινομένας ἄλως. εἰ μὲν γὰρ μία εἶη καὶ αὐτὴ καθαρὰ καὶ ἡρέμα ὑπομαραιομένη, εὐδίαν· εἰ δὲ δύο ἢ καὶ τρεῖς εἶεν, χειμῶνας δηλοῦσιν· ὑπόκιρροι μὲν οὖσαι καὶ ὡσπερ <sup>7</sup> ῥηγνύμεναι, τοὺς διὰ σφοδρῶν ἀνέμων· ἀχλυώδεις δὲ καὶ παχεῖαι, τοὺς διὰ νιφετῶν· ὑπόχλωροι δὲ ἢ μέλαιναι καὶ ῥηγνύμεναι, τοὺς δι' ἀμφοτέρων· καὶ ὅσω <sup>8</sup> ἂν πλείους ᾧσι, τοσούτω <sup>9</sup>

<sup>1</sup> ἐφ' om. AECam.

so-called parheliac clouds on one side, or yellowish formations of clouds, and as it were emits long rays, it indicates heavy winds and such as come from the angles to which the aforesaid signs point. If at rising or setting it is dark or livid, being accompanied by clouds, or if it has halos about it on one side, or the parheliac clouds on both sides, and gives forth either livid or dusky rays, it signifies storms and rain.

We must observe the moon in its course three days before or three days after new moon, full moon, and the quarters. For when it appears thin and clear and has nothing around it, it signifies clear weather. If it is thin and red, and the whole disk of the unlighted portion is visible and somewhat disturbed, it indicates winds, in that direction in which it is particularly inclined. If it is observed to be dark, or pale, and thick, it signifies storms and rains.

We must also observe the halos around the moon. For if there is one, and this is clear, and gradually fading, it signifies fair weather; if there are two or three, storms; if they are yellowish, and broken, as it were, storms accompanied by heavy winds; if they are thick and misty, snowstorms; pale, or dusky, and broken, storms with both winds and snow;

and the more of them there are the more severe the storms. And the halos that gather about the stars, both the planets and the brilliant fixed stars, signify what is appropriate to their colours and to the natures of the luminaries which they surround.

As for the fixed stars which are close together in some number, we must observe their colours and magnitudes. For if they appear brighter and larger than usual, in whatever part of the sky they may be, they indicate the winds that blow from their own region. As for the clusters in the proper sense, however, such as Praesepe and the like, whenever in a clear sky their clusters appear to be dim, and, as it were, invisible, or thickened, they signify a down-pour of water, but if they are clear and constantly twinkle, heavy winds. Whenever, of the stars called the Asses on each side of Praesepe, the one to the north becomes invisible, it means that the north wind will blow, and the one to the south, the south wind.<sup>1</sup>

Of occasional phenomena in the upper atmosphere, comets generally foretell droughts or winds, and the larger the number of parts that are found in their heads and the greater their size, the more severe the winds.

Rushing and shooting stars, if they come from one

<sup>1</sup>This sentence is perhaps an addition to the text, since it does not occur in all the MSS. nor in Proclus; it is to be found, however, in Hephaestion, p. 100, 31-33 (ed. Engelbrecht). Hephaestion's compilation dates, according to Engelbrecht, from the year 381.

## TETRABIBLOS II. 13

angle, denote the wind from that direction, but if from opposite angles, a confusion of winds, and if from all four angles, storms of all kinds, including thunder, lightning, and the like. Similarly clouds resembling flocks of wool are sometimes significant of storms. And the rainbows that appear from time to time signify storms after clear weather and clear weather after storms. To sum up the whole matter, the visible phenomena, which appear with peculiar colours of their own in the atmosphere in general, indicate results similar to those brought about by their own proper occurrences, in the manner already explained in the foregoing.<sup>1</sup>

Let us, then, consider that thus far, in outline, there has been given an account of the investigation of general questions, both in their more universal aspects and in particular detail. In the following we shall supply in due order the procedure for the prediction which follows the genethliological form.

<sup>1</sup>The purpose of this clumsy sentence seems to be merely to refer the reader to the account already given in ii. 9.

# TETRABIBLOS III. 1

## BOOK III.

### 1. *Introduction.*

As in what precedes we have presented the theory of universal events, because this comes first and for the most part has power to control the predictions which concern the special nature of any individual, the prognostic part of which we call the genethliological art, we must believe that the two divisions have one and the same power both practically and theoretically. For the cause both of universal and of particular events is the motion of the planets, sun, and moon ; and the prognostic art is the scientific observation of precisely the change in the subject natures which corresponds to parallel movements of the heavenly bodies through the surrounding heavens, except that universal conditions are greater and independent, and particular ones not similarly so. We must not, however, consider that both divisions<sup>1</sup> employ the same starting-points, from which, by reckoning the disposition of the heavenly bodies, we attempt to foretell the events signified by their aspects at that time. On the contrary, in the case of the universals we have to take many starting-points, since we have no single one for the universe ;

<sup>1</sup> *I.e.* general astrology and genethliological astrology.

### TETRABIBLOS III. 1

and these too are not always taken from the subjects themselves, but also from the elements that attend them and carry with them the causes; for we investigate practically all the starting-points presented by the more complete eclipses and the significant passages of the planets. In predictions affecting individual men, however, we have both one and many starting-points. The one is the beginning of the temperament itself,<sup>1</sup> for this we have; and the many are the successive significances of the ambients which are relative to this first beginning, though to be sure the single starting-point is naturally in this case of greatest importance because it produces the others. As this is so, the general characteristics of the temperament are determined from the first starting-point, while by means of the others we predict events that will come about at specific times and vary in degree, following the so-called ages of life.<sup>2</sup>

Since the chronological starting-point of human nativities is naturally the very time of conception, but potentially and accidentally the moment of birth, in cases in which the very time of conception is known either by chance or by observation, it is more fitting that we should follow it in determining the special

<sup>1</sup>“Temperament” here is used in its astrological sense, of the mingling of physical and other traits which make up the individual. Cf. the similar use of *κρᾶσις* in i. 11, p. 64.

<sup>2</sup>The “divisions of the successive times,” *i.e.* the ages of man, are discussed in iv. 10.

nature of body and soul, examining the effective power of the configuration of the stars at that time. For to the seed is given once and for all at the beginning such and such qualities by the endowment of the ambient; and even though it may change as the body subsequently grows, since by natural process it mingles with itself in the process of growth only matter which is akin to itself, thus it resembles even more closely the type of its initial quality.

But if they do not know the time of conception, which is usually the case, we must follow the starting-point furnished by the moment of birth and give to this our attention, for it too is of great importance and falls short of the former only in this respect—that by the former it is possible to have foreknowledge also of events preceding birth. For if one should call the one “source” and the other, as it were, “beginning,” its importance in time, indeed, is secondary, but it is equal or rather even more perfect in potentiality, and with reasonable propriety would the former be called the genesis of human seed and the latter the genesis of a man. For the child at birth and his bodily form take on many additional attributes which he did not have before, when he was in the womb, those very ones indeed which belong to human nature alone; and even if it seems that the ambient at the time of birth contributes nothing toward his quality, at least his very coming forth into the light under the appropriate conformation of the heavens contributes,

### TETRABIBLOS III. 1

since nature, after the child is perfectly formed, gives the impulse to its birth under a configuration of similar type to that which governed the child's formation in detail in the first place.<sup>1</sup> Accordingly one may with good reason believe that the position of the stars at the time of birth is significant of things of this sort, not, however, for the reason that it is causative in the full sense, but that of necessity and by nature it has potentially very similar causative power.

Since it is our present purpose to treat of this division likewise systematically on the basis of the discussion, introduced at the beginning of this compendium, of the possibility of prediction of this kind, we shall decline to present the ancient method of prediction, which brings into combination all or most of the stars, because it is manifold and well-nigh infinite, if one wishes to recount it with accuracy. Besides, it depends much more upon the particular attempts of those who make their inquiries directly from nature than of those who can theorize on the basis of the traditions; and furthermore we shall omit it on account of the difficulty in using it and following it. Those very procedures through which each kind of thing is apprehended by the practical method, and the active influences of the stars, both special and general, we shall, as far as possible, consistently and briefly, in accordance

<sup>1</sup> An assumption which Ptolemy does not think it necessary to demonstrate. The statement that the sign in which the moon was found at the conception would be in the ascendant at the nativity is attributed to "Neehepso and Petosiris"; Boll-Bezold-Gundel, p. 154; cf. Bouché-Leclercq, pp. 376, 379.

## TETRABIBLOS III. 1-2

with natural conjecture, set forth. Our preface shall be an account of the places in the heavens to which reference is made when particular human events are theoretically considered, a kind of mark at which one must aim before proceeding further ; to this we shall add a general discussion of the active powers of the heavenly bodies that gain kinship with these places by dominating them—the loosing of the arrow, as it were ; but the predicted result, summed up by the combination of many elements applied to the underlying form, we shall leave, as to a skilful archer, to the calculation of him who conducts the investigation. First, then, we shall discuss in proper sequence the general matters the consideration of which is accomplished through the time of birth taken as the starting-point, for, as we have said, this furnishes an explanation of all natural events, but, if one is willing to take the additional trouble, by the same reasoning the properties that fall at the time of conception will also be of aid toward ascertaining the peculiar qualities that apply directly to the combination.

### *2. Of the Degree of the Horoscopic Point.*

Difficulty often arises with regard to the first and most important fact, that is, the fraction of the hour of the birth ; for in general only observation by means of horoscopic astrolabes <sup>1</sup> at the time of birth

<sup>1</sup> An instrument consisting of a graduated circle with a movable arm by which angles above the horizon could be taken.

<sup>1</sup>The "solar instruments" are sun-dials, the gnomons of which cast shadows, the position and length of which

## TETRABIBLOS III. 2

can for scientific observers give the minute of the hour, while practically all other horoscopic instruments on which the majority of the more careful practitioners rely are frequently capable of error, the solar instruments by the occasional shifting of their positions or of their gnomons,<sup>1</sup> and the water clocks by stoppages and irregularities in the flow of the water from different causes and by mere chance. It would therefore be necessary that an account first be given how one might, by natural and consistent reasoning, discover the degree of the zodiac which should be rising, given the degree of the known hour nearest the event, which is discovered by the method of ascensions.<sup>2</sup> We must, then, take the syzygy<sup>3</sup> most recently preceding the birth, whether it be a new moon or a full moon; and, likewise having ascertained the degree accurately, of both the luminaries if it is a new moon, and if it is a full moon that of the one of them that is above the earth, we must see what stars rule it at the

are significant. Clepsydrae, or water-clocks, operated on the principle of the hour-glass, except that water was used instead of sand. In addition to these instruments the practitioner would undoubtedly have tables of various sorts, including ephemerides, which gave the position of the sun, moon, and planets from day to day, tables of ascensions, etc. Examples of them are preserved among the papyri.

<sup>2</sup>The "ascensions" are the times, measured in arcs of the equator, in which the signs of the zodiac (which do not lie on the equator, but along the ecliptic, which is oblique to the equator) rise above the horizon. They will vary for the individual signs, and for the latitudes (Greek, "climes," κλίματα) at which observations are made.

<sup>3</sup>A conjunction or an opposition.

## TETRABIBLOS III. 2

time of the birth.<sup>1</sup> In general the mode of domination is considered as falling under these five forms : when it is trine, house, exaltation, term, and phase or aspect ; that is, whenever the place in question is related in one or several or all of these ways to the star that is to be the ruler. If, then, we discover that one star is familiar with the degree in all or most of these respects, whatever degree this star by accurate reckoning occupies in the sign through which it is passing, we shall judge that the corresponding degree is rising at the time of the nativity in the sign which is found to be closest by the method of ascensions.<sup>2</sup> But if we discover two or more co-rulers, we shall use the number of degrees shown by whichever of them is, at the time of birth, passing through the degree that is closer to that which is rising according to the ascensions. But if two or more are close in the number of degrees, we shall follow the one which is most nearly related to the centres and the sect. If, however, the distance of the degree occupied by the ruler from that of the general horoscope is greater than its distance

<sup>1</sup>The text adopted is that of the two most important MSS. and is supported by the anonymous commentator. Bouché-Leclercq (p. 388, n. 1) would discard the words *κατὰ τὸν χρόνον τῆς ἐκτροπῆς*, but he had made no examination of the MSS. and presumably did not know that the best of them support *κατὰ τε κτλ.*, the reading mentioned by the commentator. To observe the position of the luminary above the earth at the time of conjunction, rather than that of the one that is above the earth at the time of the nativity, seems much simpler and more natural.

<sup>2</sup>On Ptolemy's rule for determining the ascendant degree, cf. Bouché-Leclercq, pp. 387-388.

<sup>1</sup> Ordinarily the horoscope, or ascendant, would be the point of reference by which the other centres (mid-heaven, occident, inferior mid-heaven) of the nativity would be

### TETRABIBLOS III. 2-3

from that of the corresponding mid-heaven, we shall use this same number to constitute the mid-heaven and thereby establish the other angles.<sup>1</sup>

#### 3. *The Subdivision of the Science of Nativities.*

After this preface, should any one simply for the sake of order attempt to subdivide the whole field of genethliological science, he would find that, of all the natural and possible predictions, one division concerns solely events preceding the birth, such as the account of the parents ; another deals with events both before and after the birth, such as the account of brothers and sisters ; another, with events at the very time of the birth, a subject which is no longer so unitary and simple ; and finally that which treats of post-natal matters, which is likewise more complex in its theoretical development.<sup>2</sup> Among the subjects contemporary with the birth into which inquiry is made are those of sex, of twins or multiple births, of monsters, and of children that cannot be reared. To those dealing with post-natal events belong the account of the length of life, for this is not attached to the account of children that cannot be reared ; second, that of the form of the body and that of bodily

established. In this case the mid-heaven is made the point of reference. The "general" (ὄλοσχερές; Proclus paraphrases with *κατὰ τὸ καθ' ὅλου*) horoscope seems to be the "presumable" one.

<sup>2</sup> What follows is practically a list of chapters in Books iii and iv. Since the subject of the last chapter of Book iv (the divisions of time and the ages of man) is not included, its genuineness has been questioned, but not seriously doubted.

ψυχικῶν· ἔπειθ' ὁ περὶ τύχης κτητικῆς καὶ ὁ περὶ τύχης ἀξιοματικῆς, μετὰ δὲ ταῦτα ὁ περὶ πράξεως ποιότητος· εἶτα ὁ περὶ συμβιώσεως γαμικῆς καὶ ὁ περὶ τεκνοποιίας καὶ ὁ περὶ συνεπιπλοκῶν καὶ συναρμογῶν καὶ φίλων.<sup>1</sup> ἔξῃς δ' ὁ περὶ ξενιτείας καὶ τελευταῖος ὁ περὶ τῆς τοῦ θανάτου ποιότητος, τῇ μὲν δυνάμει συνοικειούμενος τῷ περὶ χρόνων ζωῆς, τῇ τάξει δ' εἰκότως ἐπὶ πᾶσι τούτοις τιθέμενος· ὑπὲρ ὧν ἐκάστου κατὰ τὸ κεφαλαιῶδες ποιησόμεθα τὴν ὑφήγησιν, αὐτὰς τὰς τῆς ἐπισκέψεως πραγματείας μετὰ ψιλῶν τῶν ποιητικῶν δυνάμεων, ὡς ἔφαμεν, ἐκτιθέμενοι, καὶ τὰ μὲν περιέργως ὑπὸ τῶν πολλῶν φλυαρούμενα καὶ μὴ πιθανὸν ἔχοντα λόγον πρὸς τὰς ἀπὸ τῆς πρώτης<sup>2</sup> φύσεως αἰτίας ἀποπεμπόμενοι· τὰ δὲ ἐνδεχομένην ἔχοντα τὴν κατάληψιν, οὐ διὰ κλήρων καὶ ἀριθμῶν ἀναιτιολογήτων, ἀλλὰ δι' αὐτῆς τῆς τῶν σχηματισμῶν πρὸς τοὺς οἰκείους τόπους θεωρίας ἐπισκεπτόμενοι· καθ' ὅλου μέντοι καὶ ἐπὶ πάντων ἀπλῶς, ἵνα μὴ καθ' ἕκαστον εἶδος ταυτολογῶμεν.

### TETRABIBLOS III. 3

illnesses and injuries ; next, that of the quality of the mind and illnesses of the mind ; then that which concerns fortune, both in the matter of possessions and in that of dignities ; and after this the account of the quality of action ; then that of marriage and of the begetting of children, and that of associations, agreements, and friends ; following comes the account of journeys, and finally that of the quality of death, which is potentially akin to the inquiry about the length of life, but in order is reasonably placed at the end of all these subjects. We shall sketch each of these subjects briefly, explaining, as we said before, together with the effective powers by themselves, the actual procedure of investigation ; as for the nonsense on which many waste their labour and of which not even a plausible account can be given, this we shall dismiss in favour of the primary natural causes. What, however, admits of prediction we shall investigate, not by means of lots and numbers of which no reasonable explanation can be given, but merely through the science of the aspects of the stars to the places with which they have familiarity, in general terms, however, which are applicable to absolutely all cases, that we may avoid the repetition involved in the discussion of particular cases.

In the first place, we should examine that place of the zodiac which is pertinent to the specific heading of the geniture which is subject to query ; for example, the mid-heaven, for the query about action, or the place of the sun for the question about the father ; then we must observe those planets which have the relation of rulership to the place in question

τρόπους. κἄν μὲν εἷς ἢ ὁ κατὰ πάντας<sup>1</sup> κύριος, τούτῳ<sup>2</sup> διδόναι τὴν ἐκείνης τῆς προτελέσεως οἰκοδεσποτίαν· ἐὰν δὲ δύο ἢ τρεῖς, τοῖς τὰς πλείους ἔχουσι ψήφους· μετὰ δὲ ταῦτα πρὸς μὲν τὸ ποιὸν τοῦ ἀποτελέσματος σκοπεῖν τὰς τε αὐτῶν τῶν οἰκοδεσποτησάντων ἀστέρων φύσεις καὶ τὰς τῶν δωδεκατημορίων ἐν οἷς εἰσιν αὐτοὶ τε καὶ οἱ συνοικειούμενοι<sup>3</sup> τόποι· πρὸς δὲ τὸ μέγεθος αὐτῶν σκοπεῖν καὶ τὴν δύναμιν<sup>4</sup> πότερον ἐνεργῶς τυγχάνουσι διακείμενοι κατὰ τε αὐτὸ τὸ κοσμικὸν καὶ τὸ κατὰ τὴν γένεσιν ἢ τὸ ἐναντίον· δραστικώτατοι μὲν γάρ εἰσιν ὅταν κοσμικῶς μὲν ἐν ἰδίῳ ἢ ἐν οἰκείῳ ὧσι τόποις· καὶ πάλιν ὅταν ἀνατολικοὶ τυγχάνωσι καὶ προσθετικοὶ τοῖς ἀριθμοῖς· κατὰ γένεσιν δὲ ὅταν ἐπὶ τῶν κέντρων ἢ τῶν ἐπαναφορῶν παροδεύωσι καὶ μάλιστα τῶν πρώτων, λέγω δὴ τῶν τε κατὰ τὰς ἀναφορὰς καὶ τὰς μεσουρανήσεις· ἀδρανέστατοι δὲ ὅταν κοσμικῶς μὲν<sup>5</sup> ἐν τοῖς ἄλλοτρίοις ἢ ἀνοικείοις ὧσι τόποις καὶ δυτικοὶ ἢ 113 ἀναποδιστικοὶ<sup>6</sup> τοῖς δρόμοις ὧσι· κατὰ γένεσιν δὲ ὅταν ἀποκλίνωσι τῶν κέντρων· πρὸς δὲ τὸν καθ'

by the five ways aforesaid ;<sup>1</sup> and if one planet is lord in all these ways, we must assign to him the rulership of that prediction ; if two or three, we must assign it to those which have the more claims. After this, to determine the quality of the prediction, we must consider the natures of the ruling planets themselves and of the signs in which are the planets themselves, and the places familiar to them. For the magnitude of the event we must examine their power<sup>2</sup> and observe whether they are actively situated both in the cosmos itself and in the nativity,<sup>3</sup> or the reverse ; for they are most effective when, with respect to the cosmos, they are in their own or in familiar regions, and again when they are rising and are increasing in their numbers ;<sup>4</sup> and, with respect to the nativity, whenever they are passing through the angles or signs that rise after them,<sup>5</sup> and especially the principal of these, by which I mean the signs ascendant and culminating. They are weakest, with respect to the universe, when they are in places belonging to others or those unrelated to them, and when they are occidental or retreating in their course ; and, with respect to the nativity, when they are declining from the angles. For the time of

<sup>1</sup> See c. 2, p. 233.

<sup>2</sup> The power of the ruling planets.

<sup>3</sup> The horoscopic point and other angles change for each nativity ; the signs of the zodiac, houses of the planets, terms, etc., are cosmic, as being related to the universe itself and therefore fixed.

<sup>4</sup> *I.e.* when their movement in the zodiac is direct, not retrograde. The theory of epicycles was used to explain the stations and changes of direction in the movement of the planets.

<sup>5</sup> Or, the signs succedent (*ἐπαναφοραί*) to the angles.

ὄλου χρόνον τοῦ ἀποτελέσματος πότερον ἐῶοί εἰσιν ἢ ἐσπέριοι πρὸς τε τὸν ἥλιον καὶ τὸν ὠροσκόπον, ἐπειδήπερ τὰ μὲν προηγούμενα ἑκατέρου αὐτῶν τεταρτημόρια καὶ τὰ διάμετρα τούτοις ἐῶα γίνεται, τὰ δὲ λοιπὰ καὶ ἐπόμενα ἐσπέρια· καὶ πότερον ἐπὶ τῶν κέντρων τυγχάνουσιν ἢ τῶν ἐπαναφορῶν· ἐῶοι μὲν γὰρ ὄντες ἢ ἐπίκεντροι κατ' ἀρχὰς γίνονται δραστικώτεροι, ἐσπέριοι δὲ ἢ ἐπὶ τῶν ἐπαναφορῶν βραδύτεροι.

## TETRABIBLOS III. 3-4

the predicted event in general we must observe whether they are oriental or occidental to the sun and to the horoscope ; for the quadrants which precede each of them and those which are diametrically opposite are oriental, and the others, which follow, are occidental. Also we must observe whether they are at the angles or in the succedent signs ; for if they are oriental or at the angles they are more effective at the beginning ; if they are occidental or in the succeeding signs they are slower to take action.

### 4. *Of Parents.*

The guiding style of the specific inquiry, to which we should adhere throughout, runs after this fashion. We shall now, therefore, begin, following the order just stated, with the account of parents, which comes first. Now the sun and Saturn are by nature associated with the person of the father and the moon and Venus with that of the mother, and as these may be disposed with respect to each other and the other stars, such must we suppose to be the affairs of the parents. Now the question of their fortune and wealth must be investigated by means of the attendance<sup>1</sup> upon the luminaries ; for when they are surrounded by planets that can be of benefit and by planets of their own sect, either in the same signs or in the next following, they signify that the circumstances of the parents will be conspicuously brilliant, particularly if morning stars attend the

<sup>1</sup> *δορυφορία*, "attendance," and *δορυφόρος*, "spear-bearer," "attendant," outside of astrology refer to the hired military guards of princes and tyrants.

ἀστέρες, τὴν δὲ σελήνην ἐσπέριοι, καλῶς καὶ αὐτοὶ διακείμενοι καθ' ὃν εἰρήκαμεν τρόπον.<sup>1</sup> ἔαν δὲ καὶ ὁ τοῦ Κρόνου καὶ ὁ τῆς Ἀφροδίτης καὶ αὐτοὶ τυγχάνωσιν ἀνατολικοὶ τε καὶ ἰδιοπροσωποῦντες ἢ καὶ ἐπίκεντροι, εὐδαιμονίαν πρόδηλον ὑπονοητέον κατὰ τὸ οἰκεῖον ἑκατέρου τῶν γονέων· τὸ δὲ ἐναντίον, ἔαν κενοδρομοῦντα ἢ τὰ φῶτα καὶ ἀδορυφόρητα τυγχάνοντα, ταπεινότητος καὶ ἀδοξίας τῶν γονέων ἐστὶ δηλωτικὰ καὶ μάλισθ' ὅταν ὁ τῆς Ἀφροδίτης ἢ καὶ ὁ τοῦ Κρόνου μὴ καλῶς<sup>2</sup> φαίνωνται διακείμενοι. ἔαν δὲ δορυφόρηται μὲν, μὴ μέντοι ὑπὸ τῶν τῆς αὐτῆς αἰρέσεως, ὡς ὅταν Ἄρης μὲν ἐπαναφέρηται τῷ ἡλίῳ, Κρόνος δὲ τῇ σελήνῃ, ἢ μὴ ὑπὸ καλῶς κειμένων τῶν ἀγαθοποιῶν καὶ κατὰ τὴν αὐτὴν αἴρεσιν, μετριότητα καὶ ἀνωμαλίαν περὶ τὸν βίον αὐτῶν ὑπονοητέον. κἂν μὲν σύμφωνος ἢ ὁ διασημανθησόμενος τῆς τύχης κληῖρος ἐν τῇ γενέσει τοῖς τὸν ἥλιον ἢ τὴν σελήνην<sup>3</sup> ἐπὶ καλῶ δορυφορήσασι, παραλήψονται σῶα τὰ τῶν γονέων· ἔαν δὲ ἀσύμφωνος ἢ ἢ ἐναντίος, μηδενὸς ἢ τῶν κακοποιῶν εἰληφότων τὴν δορυφορίαν, ἄχρηστος αὐτοῖς καὶ ἐπιβλαβὴς ἢ τῶν γονέων ἔσται κτῆσις.

## TETRABIBLOS III. 4

sun and evening stars the moon, while the luminaries themselves are favourably placed in the way already described.<sup>1</sup> But if both Saturn and Venus, likewise, happen to be in the orient and in their proper faces,<sup>2</sup> or at the angles, we must understand it to be a prediction of conspicuous happiness, in accordance with what is proper and fitting for each parent. But, on the other hand, if the luminaries are proceeding alone and without attendants, they are indicative of low station and obscurity for the parents, particularly whenever Venus or Saturn do not appear in a favourable position. If, however, they are attended, but not by planets of the same sect, as when Mars rises close after the sun or Saturn after the moon, or if they are attended by beneficent planets which are in an unfavourable position and not of the same sect, we must understand that a moderate station and changing fortunes in life are predicted for them. And if the Lot of Fortune,<sup>3</sup> of which we shall make an explanation, is in agreement in the nativity with the planets which in favourable position attend the sun or the moon, the children will receive the patrimony intact; if, however, it is in disagreement or opposition, and if no planet attends, or the maleficent planets are in attendance, the estate of the parents will be useless to the children and even harmful.

With regard to the length or the shortness of their life one must inquire from the other configurations. For in the father's case, if Jupiter or Venus is in any

### TETRABIBLOS III. 4

aspect whatever to the sun and to Saturn, or if Saturn himself is in an harmonious aspect to the sun, either conjunction, sextile, or trine, both being in power, we must conjecture long life for the father ; if they are weak, however, the significance is not the same, though it does not indicate a short life. If, however, this condition is not present, but Mars overcomes<sup>1</sup> the sun or Saturn, or rises in succession to them, or when again Saturn is not in accord with the sun but is either in quartile or in opposition, if they are declining from the angles, they merely make the fathers weak, but if they are at the angles or rising after them, they make them short-lived or liable to injury : short-lived when they are upon the first two angles, the orient and the mid-heaven, and the succedent signs, and liable to injury or disease when they are in the other two angles, the occident and lower mid-heaven, or their succedent signs. For Mars, regarding the sun in the way described,<sup>2</sup> destroys the father suddenly or causes injuries to his sight ; if he thus regards Saturn he puts him in peril of death or of chills and fever or of injury by cutting and cauterizing. Saturn himself in an unfavourable aspect to the sun brings about the father's death by disease and illnesses caused by gatherings of humours.

<sup>1</sup>The anonymous commentator on Ptolemy says that "stars are said to overcome (*καθυπερτερεῖν*) when they are of a smaller number of degrees," *i.e.* of the zodiac. The right takes precedent over the left, as a general rule. *Cf.* Bouché-Leclercq, p. 250, n. 1.

<sup>2</sup>In quartile or opposition.

### TETRABIBLOS III. 4

In the case of the mother, if Jupiter is in any aspect whatever to the moon and to Venus, or if Venus herself is concordant with the moon, in sextile, trine, or conjunction, when they are in power, they signify long life for the mother. If, however, Mars regards the moon or Venus, rising after her or in quartile or in opposition, or if Saturn similarly regards the moon by herself, when they are diminishing or declining, again they merely threaten with misfortune or sickness; but if they are increasing or angular, they make the mothers short-lived or subject to injury. They make them short-lived similarly when they are at the eastern angles or the signs that rise after them, and liable to injury when they are at the western angles. For when Mars in this way regards the waxing moon, it brings about sudden death and injury of the eyesight for the mothers; but if the moon is waning, death from abortions or the like, and injury from cutting and cauterizing. If he regards Venus, he causes death by fever, mysterious and obscure illnesses, and sudden attacks of disease. Saturn regarding the moon causes death and illnesses, when the moon is in the orient, by chills and fever; when she is in the occident, by uterine ulcers and cancers.

We must take into consideration, also, with reference to the particular kinds of injuries, diseases, or deaths, the special characters of the signs in which are the planets which produce the cause, with which

### TETRABIBLOS III. 4

we shall find more appropriate occasion to deal in the discussion of the nativity itself,<sup>1</sup> and furthermore we must observe by day particularly the sun and Venus, and by night Saturn and the moon.

For the rest, in carrying out these particular inquiries, it would be fitting and consistent to set up the paternal or maternal place of the sect as a horoscope<sup>2</sup> and investigate the remaining topics as though it were a nativity of the parents themselves, following the procedure for the investigation of the general classifications, both practical and casual, the headings of which will be set forth in the following. However, both here and everywhere it is well to recall the mode of mixture of the planets, and, if it happens that the planets which rule the places under inquiry are not of one kind but different, or bring about opposite effects, we should aim to discover which ones have most claims, from the ways in which they happen to exceed in power in a particular case, to the rulership of the predicted events. This is in order that we may either guide our inquiry by the natures of these planets, or, if the claims of more than one are of equal weight, when the rulers are together, we may successfully calculate the combined result of the

<sup>1</sup> Cf. iii. 12, iv. 9.

<sup>2</sup> The anonymous commentator, on this passage, says that the significant planet is to be taken as the horoscope. Cf. a similar statement at the end of c. 5 and Bouché-Leclercq, p. 394.

mixture of their different natures; but when they are separated, that we may assign to each in turn at their proper times the events which belong to them, first to the more oriental among them and then to the occidental. For a planet must from the beginning have familiarity with the place about which the inquiry is made, if it is going to exercise any effect upon it, and in general, if this is not the case, a planet which had no share whatsoever in the beginning can exert no great influence; of the time of the occurrence of the event, however, the original dominance is no longer the cause, but the distance of the planet which dominates in any way from the sun and from the angles of the universe.

#### 5. *Of Brothers and Sisters.*

The preceding may perhaps have made clear the topic of the parents. As for that of brethren, if here too one examines only the general subject and does not carry beyond the bounds of possibility his inquiry as to the exact number and other particulars, it is more naturally to be taken, when it is a question of blood-brethren alone, from the culminating sign, the place of the mother,<sup>1</sup> that is, that which contains by day Venus and by night the

<sup>1</sup>This is the reading of all the MSS. and Proclus. Camerarius, inserting a *καί* before τοῦ μητρικοῦ τόπου, would make it "the culminating sign *and* the place of the mother." While the best-attested reading has been left in the present text, the passage is extremely difficult to understand, whichever reading is preferred.

τοῦτο τὸ ζῳδιον καὶ τὸ ἐπαναφερόμενον αὐτῷ

## TETRABIBLOS III. 5

moon ; for in this sign and that which succeeds it is the place of the children of the mother, which should be the same as the place of the brethren of the offspring. If, then, beneficent planets bear an aspect to this place, we shall predict an abundance of brethren, basing our conjecture upon the number of the planets and whether they are in signs of a simple or of a bicorporeal form. But if the malevolent planets overcome them or oppose them in opposition, they signify a dearth of brethren, especially if they have the sun among them. If the opposition is at the angles, and especially at the horoscope,<sup>1</sup> in case Saturn is in the ascendant, they are the first-born or the first to be reared ; in case it is Mars, there is a small number of brethren by reason of the death of the others. If the planets which give brethren are in a favourable mundane<sup>2</sup> position, we must believe that the brethren thereby given will be elegant and distinguished ; if the reverse is the case, humble and inconspicuous. But if the maleficent planets overcome those that give brethren, or rise after them, the brethren will also be short-lived ; and the male planets in the mundane sense<sup>3</sup> will give males, the female females ; again, those farther to the east the first and those farther to the west the later-born. Besides this, if the planets that give brethren are in harmonious aspect with the

<sup>1</sup> "Horoscope" is used here in its more original sense of the point rising above the horizon at the time the observation is made.

## TETRABIBLOS III. 5-6

planet that rules the place of brethren,<sup>1</sup> they will make the given brethren friendly, and will also make them live together, if they are in harmonious aspect with the Lot of Fortune ;<sup>2</sup> but if they are in disjunct signs or in opposition, they will produce quarrelsome, jealous, and for the most part, scheming brethren. Finally, if one would busy himself with further inquiries about details concerning individuals, he might in this case again make his conjecture by taking the planet which gives brethren as the horoscope and dealing with the rest as in a nativity.

### 6. *Of Males and Females.*

Now that the topic of brethren has been brought before our eyes in suitable and natural fashion, the next step would be to begin the discussion of matters directly concerned with the birth, and first to treat of the reckoning of males and females. This is determined by no simple theory based upon some one thing, but it depends upon the two luminaries, the horoscope, and the stars which bear some relation to them, particularly by their disposition at the time of conception, but more generally also by that at the time of the birth. The whole situation must be observed, whether the aforesaid three places and the planets which rule them are either all or the most of them masculine, to produce males, or feminine,

<sup>1</sup> *I.e.* the place (literally, "twelfth part" of the zodiac) which governs the inquiry about brethren ; see the beginning of this chapter.

to produce females, and on this basis the decision must be made. We must however distinguish the male and the female planets in the way set forth by us in the tabular series in the beginning of this compilation,<sup>1</sup> from the nature of the signs in which they are, and from the nature of the planets themselves, and furthermore from their position with reference to the universe, since they become masculine when they are in the east and feminine in the west; and besides, from their relation to the sun, for again when they rise in the morning they are made masculine, and feminine when they rise in the evening. By means of all these criteria one must conjecture what planet exercises preponderating control over the sex.

### 7. *Of Twins.*

Likewise with regard to the births of two or even more, it is fitting to observe the same two places, that is, the two luminaries and the horoscope. For such an event is apt to attend the intermixture<sup>2</sup> when either two or the three places<sup>3</sup> cover bicorporeal signs, and particularly when the same is true of the planets that rule them, or when some are in bicorporeal signs, and some are disposed in pairs or in larger groups. But when both the dominant places are in bicorporeal signs and most of the planets are similarly

<sup>2</sup> In the preceding chapter.

configured, then it befalls that even more than two are conceived, for the number is conjectured from the star that causes the peculiar property of the number,<sup>1</sup> and the sex from the aspects which the planets have with respect to the sun and the moon and the horoscope for the production of males or of females, in accordance with the ways stated above.<sup>2</sup> But whenever such an arrangement of the planets does not include the horoscopic angle with the luminaries, but rather that of the mid-heaven, mothers with such genitures generally conceive twins or even more; and in particular, they give multiple birth, to three males, by the geniture of the Kings,<sup>3</sup> when Saturn, Jupiter, and Mars are in bieorporeal signs and bear some aspect to the aforesaid places; and to three females, by the geniture of the Graces, when Venus and the moon, with Mercury made feminine, are so arranged; to two males and one female, by the geniture of the Dioscuri, when Saturn, Jupiter, and Venus are so ordered, and to two females and a male, by the geniture of Demeter and Korê,<sup>4</sup> when Venus, the moon, and Mars are thus ordered. In these cases it generally happens that the children are not completely developed and are born with certain bodily

<sup>3</sup> Bouché-Leclercq, p. 398, n. 3, after remarking upon the various interpretations given this passage, says: "The title *Ἀνάκτορες* (*Ἀνακτες*, *Ἀνακες*) having been borne by the Dioscuri, the Cabiri, and the Curetes, I do not know to which group he alludes, and possibly he did not know very well himself." Cardanus remarks that Ptolemy regards three children as the largest number that can be born at one birth and survive.

<sup>4</sup> MS. N and Camerarius add here "and Dionysus," but the other MSS. agree in omitting the expression.

marks, and again the governing places may bear certain unusual and surprising marks by reason of the divine manifestation, as it were, of such portents.

### 8. *Of Monsters.*

The subject of monsters is not foreign to the present inquiry ; for, in the first place, in such cases the luminaries are found to be as far as possible removed from the horoscope or in no way related to it, and the angles <sup>1</sup> are separated by the maleficent planets. Whenever, then, such a disposition is observed, for it frequently occurs in humble and unlucky nativities, even though they are not the genitures of monsters, one should at once look for the last preceding new or full moon, and the lord of this and of the luminaries of the birth. For if the places of the birth, of the moon, and of the horoscope, all or the majority of them, happen to be unrelated to the place of the preceding syzygy, it must be supposed that the child will be nondescript. Now if, under such conditions, the luminaries are found in four-footed or animal-shaped signs,<sup>2</sup> and the two maleficent planets are centred, the child will not even belong to the human race, but if no beneficent planet witnesses to

<sup>1</sup> Cardanus and Whalley say the ascendant and the mid-heaven are meant.

<sup>2</sup> Cf. i. 12. The only human signs are Virgo, Gemini, Sagittarius, and Aquarius.

### TETRABIBLOS III. 8

the luminaries, but the maleficent planets do so, it will be completely savage, an animal with wild and harmful nature; but if Jupiter or Venus witness, it will be one of the kinds regarded as sacred, as for example dogs, cats,<sup>1</sup> and the like; if Mercury witnesses, one of those that are of use to man, such as birds, swine, oxen, goats, and the like. If the luminaries are found in signs of human form, but the other planets are disposed in the same way, what is born will be, indeed, of the human race or to be classed with humans, but monsters and nondescript in qualitative character, and their qualities in this case too are to be observed from the form of the signs in which the maleficent planets which separate the luminaries or the angles happen to be. Now if even in this case not one of the beneficent planets bears witness to any of the places mentioned, the offspring are entirely irrational and in the true sense of the word nondescript; but if Jupiter or Venus bears witness, the type of monster will be honoured and seemly, such as is usually the case with herma-phrodites or the so-called harpocratiacs,<sup>2</sup> and the like. If Mercury should bear witness, along with the foregoing, this disposition produces prophets who also make money thereby; but when alone, Mercury

<sup>1</sup> Either because they do not survive or because they are exposed; Ptolemy treats both classes in the same

makes them toothless and deaf and dumb, though otherwise clever and cunning.

### 9. *Of Children that are not Reared.*

As the account of children that are not reared<sup>1</sup> is still lacking in the discussion of matters related to the birth itself, it is fitting to see that in one way this procedure is connected with the inquiry concerning length of life, for the question in each case is of the same kind; but in another way they are distinct, because there is a certain difference in the actual meaning of the inquiry. For the question of length of life considers those who in general endure for perceptible lengths of time, that is, not less than one circuit of the sun, and such a space is properly understood to be a year; but potentially also lesser periods than this, months and days and hours, are perceptible lengths of time. But the inquiry concerning children that are not reared refers to those who do not attain at all to "time" thus defined, but perish in something less than "time" through excess of the evil influence. For this reason the investigation of the former question is more complex; but this is simpler. For it is merely the case that if one of the luminaries is angular<sup>2</sup> and one of the maleficent planets is in conjunction with it, or in

chapter, as does Firmicus Maternus, vii. 2 (*De expositis et non nutritis*). Cunont, *L'Égypte des astrologues*, p. 186, remarks that whereas the ancient Egyptian custom had been to bring up all children born, the Greeks introduced the practice of exposing unwanted babes.

<sup>2</sup> *I.e.* at one of the angles—rising, setting, or culminating.

PTOLEMY

διαμηκίζῃ, ταῦτα δὲ μοιρικῶς καὶ κατ' ἰσοσκελείαν, μηδενὸς μὲν ἀγαθοποιουῦ συσχηματιζομένου, τοῦ δ' <sup>1</sup> οἰκοδεσπότου τῶν φωτῶν ἐν τοῖς τῶν κακοποιῶν τόποις κατειλημμένου, τὸ γεννώμενον οὐ τραφήσεται, παρ' αὐτὰ δὲ ἕξει τὸ τέλος τῆς ζωῆς.<sup>2</sup> ἔὰν δὲ μὴ κατ' ἰσοσκελείαν μὲν τοῦτο συμβαίῃ ἀλλ' ἐγγὺς ἐπαναφέρωνται τοῖς τῶν φωτῶν τόποις αἱ τῶν κακοποιῶν βολαί, δύο δ' ὦσιν οἱ κακοποιοί, καὶ ἦτοι τὸ ἕτερον τῶν φωτῶν ἢ καὶ ἀμφοτέρα βλάπτοντες ἢ κατ' ἐπαναφορὰν ἢ κατὰ διάμετρον ἢ ἐν μέρει τὸ ἕτερον ὁ ἕτερος ἢ ὁ μὲν ἕτερος διαμετρῶν ὁ δὲ ἕτερος ἐπαναφερόμενος, καὶ οὕτως ἄχρονα γίνεται, τοῦ πλήθους τῶν κακώσεων ἀφανίζοντος τὸ ἐκ τοῦ διαστήματος τῆς ἐπαναφορᾶς εἰς ἐπιμονὴν τῆς ζωῆς φιλάνθρωπον. βλάπτει δὲ ἐξαιρέτως κατὰ μὲν τὰς ἐπαναφορὰς ἥλιον μὲν ὁ τοῦ Ἄρεως, σελήνην δὲ ὁ τοῦ Κρόνου, κατὰ δὲ τὰς διαμετρήσεις ἢ καθυπερτερήσεις ἀνάπαλιν ἥλιον μὲν ὁ τοῦ Κρόνου, σελήνην δὲ ὁ τοῦ Ἄρεως, καὶ

<sup>1</sup> δ' om. NCam.

<sup>2</sup> τῆς ζωῆς om. NCam.

<sup>3</sup> ἦτοι VD, cf. Proc. ; τῶν MNAECam. ; σ' L.

<sup>1</sup> κατ' ἰσοσκελείαν, literally, "by equality of leg." The anonymous commentator does not explain this expression. Cardanus (pp. 264-265) understands it to mean that the two are exactly in opposition not only in longitude ("in degrees"), but also in latitude (as when the moon is in 10° of Aries, 3° north latitude, and Saturn or Mars in 10° of Libra, 3° south latitude).

<sup>2</sup> The planet which governs the sign in which the luminaries are found.

### TETRABIBLOS III. 9

opposition, both in degrees and with equality of distance,<sup>1</sup> while no beneficent planet bears any aspect, and if the lord of the luminaries<sup>2</sup> is found in the places of the maleficent planets, the child that is born will not be reared, but will at once come to its end. But if this comes about without the equality of distance, but the shafts of the maleficent planets succeed closely upon the places of the luminaries, and there are two maleficent planets, and if they afflict<sup>3</sup> either one or both of the luminaries either by succeeding them or by opposition, or if one afflicts one luminary and the other the other in turn, or if one afflicts by opposition and the other by succeeding the luminary, in this way too children are born that do not live; for the number of afflictions dispels all that is favourable to length of life because of the distance of the maleficent planet through its succession. Mars especially afflicts the sun by succeeding it, and Saturn the moon; but conversely in opposition or in superior position Saturn afflicts the sun and Mars the moon, most of all if they occupy as rulers the

<sup>3</sup> Affliction, which in general is damage done by a maleficent planet to a beneficent one, is defined by the astrologer Antiochus (*CCAG*, viii. 3, p. 106, 34-38) as existing "when (*sc.* a beneficent planet) is smitten by the rays of maleficent planets, or is surrounded, or is in application with one of them, or in *glutinatio* (*κόλλησις*), or is governed by one of them, when the maleficent planet is in the inactive (non-signifying, *ἀχρημάτιστοι*) places. These are the sixth, third, second, eighth, and twelfth from the horoscope." Ptolemy says little about the "places" (less correctly "houses") of a geniture; they are twelfth parts of the zodiacal circle marked off from the horoscope, each with some special significance; *cf.* Boll-Bezold-Gundel, pp. 62-63.

ἢ<sup>1</sup> τὸν ὠροσκόπον οἰκοδεσποτήσαντες.<sup>2</sup> ἔαν δὲ δύο τυγχάνωσι διαμετρήσεις ἐπὶ κέντρων ὄντων τῶν φωτῶν καὶ τῶν κακοποιῶν κατ' ἰσοσκελείαν, τότε καὶ νεκρὰ ἢ ἡμιθανῆ τίκτεται τὰ βρέφη. τούτων δὲ οὕτως ἐχόντων, ἔαν μὲν ἀπόρροϊαν ἀπὸ τινος τῶν ἀγαθοποιῶν ἔχοντα τὰ φῶτα τυγχάνῃ<sup>3</sup> ἢ καὶ ἄλλως αὐτοῖς ἢ συνεσχηματισμένα, ἐν τοῖς προηγουμένοις αὐτῶν<sup>4</sup> μέρεσι μέντοιγε τὰς ἀκτῖνας αὐτῶν ἐπιφερόντων, ἐπιζήσεται τὸ τεχθὲν ἄχρι τοῦ μεταξὺ τῆς τε ἀφέσεως καὶ τῶν ἐγγυτέρων<sup>5</sup> τῶν κακοποιῶν ἀκτίνων ἀριθμοῦ, τῶν μοιρῶν τοὺς ἴσους μῆνας ἢ ἡμέρας ἢ καὶ ὥρας πρὸς τὸ μέγεθος τῆς κακώσεως καὶ τὴν δύναμιν τῶν τὸ αἴτιον ποιούντων. ἔαν δὲ αἱ τῶν κακοποιῶν ἀκτῖνες εἰς τὰ προηγούμενα φέρωνται τῶν φωτῶν, αἱ δὲ τῶν ἀγαθοποιῶν εἰς τὰ ἐπόμενα, τὸ γεννώμενον ἐκτεθὲν ἀναληφθήσεται καὶ ζήσεται. καὶ πάλιν ἔαν μὲν οἱ συσχηματισθέντες ἀγαθοποιοὶ καθυπερτερηθῶσιν ὑπὸ τῶν κακοποιῶν εἰς κάκωσιν καὶ ὑποταγὴν, ἔαν δὲ καὶ καθυπερτερήσωσιν εἰς ὑποβολὴν αλλων γονέων. εἰ δὲ καὶ τῶν ἀγαθοποιῶν τις<sup>6</sup> ἀνατολὴν ἢ τὴν συναφὴν ποιοῖτο τῇ σελήνῃ, τῶν δὲ κακοποιῶν ὑπὸ δύσιν τις εἴη, ὑπ' αὐτῶν τῶν γονέων ἀναληφθήσεται. κατὰ τὸν αὐτὸν δὲ τὸν τρόπον<sup>7</sup> καὶ ἐπὶ τῶν πλειστο-

### TETRABIBLOS III. 9

places of the luminaries or of the horoscope. But if there chance to be two oppositions, when the luminaries are at the angles and the maleficent planets are in an isosceles configuration, then the infants are born dead or half-dead. And in such circumstances, if the luminaries should chance to be removing from conjunction with one of the beneficent planets, or are in some other aspect to them, but nevertheless cast their rays in the parts that precede them, the child that is born will live a number of months or days, or even hours, equal to the number of degrees between the prorogator <sup>1</sup> and the nearest rays of the maleficent planets, in proportion to the greatness of the affliction and the power of the planets ruling the cause. But if the rays of the maleficent planets fall before the luminaries, and those of the beneficent behind them, the child that has been exposed will be taken up and will live. And again, if the maleficent planets overcome <sup>2</sup> the beneficent ones that bear an aspect upon the geniture, they will live to affliction and subjection; but if the beneficent planets overcome, they will live but as superstitious children of other parents; and if one of the beneficent planets should either be rising or applying <sup>3</sup> to the moon, while one of the maleficent planets is setting, they will be reared by their own parents. And the same methods of judgement are to be used

<sup>1</sup> A luminary, planet, or portion of the zodiac which determines the length of life or the duration of some event. The prorogators are discussed in the next chapter.

<sup>2</sup> See on iii. 4 above (p. 245, n. 1).      <sup>3</sup> See i. 24.

127 γονούντων. εἰ μὲν ὑπὸ δύσιν τις ἢ τῶν κατὰ δύο ἢ καὶ πλείους συνεσχηματισμένων ἀστέρων, ἡμιθανές τι<sup>1</sup> ἢ σάρκωμα καὶ ἀτελὲς τὸ γεννώμενον ἀποτεχθήσεται. εἰ δὲ ὑπὸ κακοποιῶν καθυπερτερῆται, ἄτροφον ἢ ἄχρονον ἔσται τὸ ὑπὸ τῆς κατ' αὐτὸν αἰτίας συγγεγεννημένον.

Ῑ. Περὶ χρόνων ζωῆς

Τῶν δὲ μετὰ τὴν γένεσιν συμπτωμάτων ἡγείται μὲν ὁ περὶ χρόνων ζωῆς λόγος, ἐπειδήπερ κατὰ τὸν ἀρχαῖον γέλοιόν ἐστι τὰ καθ' ἕκαστα τῶν ἀποτελουμένων ἐφαρμόζειν τῷ μηδ' ὅλως ἐκ τῆς τῶν βιωσίμων ἐτῶν ὑποστάσεως ἐπὶ τοὺς ἀποτελεστικοὺς αὐτῶν χρόνους ἥξοντι. θεωρεῖται δὲ οὗτος<sup>2</sup> οὐχ ἀπλῶς οὐδ' ἀπολελυμένως, ἀλλ' ἀπὸ τῆς τῶν κυριωτάτων τόπων ἐπικρατήσεως πολυμερῶς λαμβανόμενος. ἔστι δ' ὁ μάλιστα τε συμφωνῶν ἡμῖν καὶ ἄλλως ἐχόμενος φύσεως τρόπος τοιοῦτος. ἠρτηται μὲν γὰρ τὸ πᾶν ἐκ τε τῆς τῶν ἀφαιτικῶν τόπων<sup>3</sup> διαλήψεως καὶ ἐξ αὐτῶν τῶν τῆς<sup>4</sup> ἀφέσεως ἐπικρατούντων καὶ ἔτι ἐκ τῆς τῶν ἀναιρετικῶν τόπων ἢ ἀστέρων. διακρίνεται δὲ τούτων ἕκαστον οὕτως.

<sup>4</sup> αὐτῶν τῶν τῆς VPLD; τῶν τῆς αὐτῆς MNAECam.

<sup>1</sup> Perhaps a reference to Petosiris. The passage is included by E. Riess among the fragments of Nechepso and Petosiris, *Philologus*, Supplementband 6, p. 358.

<sup>2</sup> *Aphetic* is also used. *Hyleg* is the Arabic term.

also in cases of multiple births. But if one of the planets that two by two or in larger groups bear an aspect to the geniture is at setting, the child will be born half-dead, or a mere lump of flesh, and imperfect. But if the maleficent planets overcome them, the infant born subject to this influence will not be reared or will not survive.

### 10. *Of Length of Life.*

The consideration of the length of life takes the leading place among inquiries about events following birth, for, as the ancient<sup>1</sup> says, it is ridiculous to attach particular predictions to one who, by the constitution of the years of his life, will never attain at all to the time of the predicted events. This doctrine is no simple matter, nor unrelated to others, but in complex fashion derived from the domination of the places of greatest authority. The method most pleasing to us and, besides, in harmony with nature is the following. For it depends entirely upon the determination of the prorogative<sup>2</sup> places and the stars that rule the prorogation, and upon the determination of the destructive<sup>3</sup> places or stars.<sup>4</sup> Each of these is determined in the following fashion :

<sup>3</sup> Or *anaeretic*.

<sup>4</sup> Bouché-Leclercq's (p. 411) summary of Ptolemy's system of prorogations is helpful: "His theory rests essentially upon the likening of the zodiac to a wheel upon which the life of the individuals is cast with a greater or less force from a certain place of departure (*τόπος ἀφαιτικός*) and finds itself arrested, or in danger of being arrested, by barriers or destructive places (*τόποι ἀναιρετικοί*), without being able in any case to go beyond a quarter of the circle. The number of degrees traversed, converted into degrees of right ascension, gives the number of the years of life."

<sup>1</sup> Sc. degrees.

<sup>2</sup> Though he pays little attention to the system of "places" or "houses" so much used by the astrologers in

In the first place we must consider those places prorogative in which by all means the planet must be that is to receive the lordship of the prorogation; namely, the twelfth part of the zodiac surrounding the horoscope, from  $5^{\circ}$  above the actual horizon up to the  $25^{\circ}$  that remains, which is rising in succession to the horizon; the part sextile dexter to these thirty degrees, called the House of the Good Daemon; the part in quartile, the mid-heaven; the part in trine, called the House of the God; and the part opposite, the Occident. Among these there are to be preferred, with reference to power of domination, first those<sup>1</sup> which are in the mid-heaven, then those in the orient, then those in the sign succedent to the mid-heaven, then those in the occident,<sup>2</sup> then those in the sign rising before mid-heaven; for the whole region below the earth must, as is reasonable, be disregarded when a domination of such importance is concerned, except only those parts which in the ascendant sign itself are coming into the light. Of the part above the earth it is not fitting to consider either the sign that

the actual casting of nativities, Ptolemy here deals with four besides the horoscope itself. Their usual names are: I, Horoscope, *ᾠροσκόπος*; II, Gate of Hades, *Ἄιδου πύλη*; III, Goddess, *Θεά* (i.e. moon); IV, lower mid-heaven, *ὑπογείον*; V, Good Fortune, *ἀγαθὴ τύχη*; VI, Bad Fortune, *κακὴ τύχη*; VII, Occident, *δύσις*; VIII, Beginning of Death, *ἀρχὴ θανάτου*; IX, God, *Θεός* (i.e. sun); X, mid-heaven, *μεσουράνημα*; XI, Good Daemon, *ἀγαθὸς δαίμων*; XII, Bad Daemon, *κακὸς δαίμων*. Cf. P. Mich. 149. col. ix, 13-19, where slightly different names are given. In this passage Ptolemy has mentioned numbers I, XI, X, IX, VII.

τὸν κλήρον τῆς τύχης.

<sup>1</sup> The eighth house. "Sign," of course, in this passage  
means not the fixed signs of the zodiac, but the places or  
houses of the nativity. One MS. adds here, "which is

is disjunct from the ascendant,<sup>1</sup> nor that which rose before it, called the House of the Evil Daemon,<sup>2</sup> because it injures the emanation from the stars in it to the earth and is also declining, and the thick, misty exhalation from the moisture of the earth creates such a turbidity and, as it were, obscurity, that the stars do not appear in either their true colours or magnitudes.

After this again we must take as prorogatives the four regions of greatest authority, sun, moon, horoscope, the Lot of Fortune, and the rulers of these regions.

Take as the Lot of Fortune<sup>3</sup> always the amount of the number of degrees, both by night and by day, which is the distance from the sun to the moon, and which extends to an equal distance from the horoscope in the order of the following signs,<sup>4</sup> in order that, whatever relation and aspect the sun

called the Inactive Place," probably a scholion which has entered the text. See the critical note.

<sup>2</sup> The twelfth house.

<sup>3</sup> The directions given amount to this : Take the angular distance from sun to moon in the order of the following signs, *i.e.* in the direction in which the zodiac is graduated ; then lay out the same distance, in the same sense, from the horoscope. The point reached is the Lot of Fortune, and it will be located with respect to the moon as the horoscope is with respect to the sun ; hence it can be called a "lunar horoscope." With the older MSS. and Proclus we read *φέρωντος* instead of *ἀφαιρούντες* in this passage. On the various accounts of the Lot of Fortune see Bouché-Leclercq, pp. 289-296 (who, however, read *ἀφαιρούντες* here).

<sup>4</sup> Here two MSS. and Camerarius (see the critical note) add : "and wherever the number falls, we may say that the Lot of Fortune falls upon that degree of the sign and occupies that place."

## TETRABIBLOS III. 10

bears to the horoscope, the moon also may bear to the Lot of Fortune, and that it may be as it were a lunar horoscope.<sup>1</sup>

Of these,<sup>2</sup> by day we must give first place to the sun, if it is in the prorogative places ; if not, to the moon ; and if the moon is not so placed, to the planet <sup>3</sup> that has most relations of domination to the sun, to the preceding conjunction, and to the horoscope ; that is, when, of the five methods of domination <sup>4</sup> that exist, it has three to one, or even more ; but if this cannot be, then finally we give preference to the horoscope. By night prefer the moon first,

<sup>1</sup> Camerarius and certain MSS. add here: "We ought, however, to observe which of the luminaries is found following the other. For if the moon is found following the sun, we must lay out the number which intervenes between the horoscope and the Lot of Fortune in the order of following signs ; but if the moon is found preceding the sun, we must set forth this same number from the horoscope in the order of leading signs. Perhaps this is what he means, and the writer's intention is to count from moon to sun in the case of those born at night, and to make the interval in the other direction from the horoscope, that is in the order of leading signs ; for thus it will turn out to be the same place for the Lot of Fortune and the same relation of aspect which he mentions." The first part of this passage can hardly be genuine because it is at variance with the general directions just given by Ptolemy ; the introductory phrase of the last part clearly shows that it originated as a scholion.

<sup>2</sup> *I.e.* sun, moon, horoscope, Lot of Fortune, and the rulers (see above),

<sup>3</sup> In an aphetic (prorogative) place, says Cardanus (p. 469).

<sup>4</sup> See iii. 2 (p. 233).

ἥλιον, εἶτα τὸν πλείονας ἔχοντα<sup>1</sup> λόγους οἰκοδεσποτίας πρὸς τε τὴν σελήνην καὶ πρὸς τὴν προγενομένην πανσέληνον καὶ τὸν κλῆρον τῆς τύχης· εἰ δὲ μή, τελευταῖον, συνοδικῆς μὲν οὔσης τῆς προγενομένης συζυγίας, τὸν ὠροσκόπον, πανσεληνιακῆς δὲ τὸν κλῆρον τῆς τύχης.<sup>2</sup> εἰ δὲ καὶ ἀμφότερα τὰ φῶτα ἢ καὶ ὁ τῆς οἰκείας αἰρέσεως οἰκοδεσπότης ἐν τοῖς ἀφαιτικοῖς εἶεν τόποις, τὸν ἐν<sup>3</sup> τῷ κυριωτέρῳ τόπῳ<sup>4</sup> τῶν φωτῶν παραληπτέον· τότε δὲ μόνον τὸν οἰκοδεσπότην ἀμφοτέρων προκριτέον, ὅταν καὶ κυριώτερον ἐπέχη τόπον καὶ πρὸς ἀμφοτέρας τὰς αἰρέσεις οἰκοδεσποτίας λόγον ἔχη.<sup>5</sup>

---

<sup>1</sup> "But otherwise finally the horoscope is the prorogator" is added here in certain MSS.

<sup>2</sup> I.e. a planet which may be the prorogator. The "proper sect" will be diurnal in diurnal genitures, nocturnal in nocturnal.

next the sun, next the planets having the greater number of relations of domination to the moon, to the preceding full moon, and to the Lot of Fortune ; otherwise, finally, if the preceding syzygy was a new moon, the horoscope, but if it was a full moon the Lot of Fortune.<sup>1</sup> But if both the luminaries or the ruler of the proper sect <sup>2</sup> should be in the prorogative places, we must take the one of the luminaries that is in the place of greatest authority. And we should prefer the ruling planet to both of the luminaries only when it both occupies a position of greater authority and bears a relation of domination to both the sects.

When the prorogator has been distinguished, we must still further adopt two methods of prorogation.<sup>3</sup> The one, that which follows the order of the following signs, must be used only in the case of what is called

<sup>3</sup> Bouché-Leclercq's (pp. 418-419) exposition may be quoted : "The prorogator once determined . . . it is necessary to determine the sense in which it launches the life from its prorogative place ; the direct sense, that is, in accordance with the proper movement of the planets, when it follows the series of [following] signs . . . ; retrograde . . . when it follows the diurnal movement. . . . At all events there is in both cases unity of measurement, the diurnal movement. In the sense here called direct the diurnal movement brings the anaeretic planet or ' following place ' to meet the ' preceding place ' where the prorogator is lodged. In the contrary sense it is the prorogator which is carried to the anaeretic place, which is always the occident. By either manner the length of life was equal to the number of degrees of right ascension between the prorogative place and the anaeretic place, at the rate of one year to a degree." He proceeds to point out that it therefore becomes necessary to convert degrees of the zodiac into degrees of right ascension measured on the equator.

ὅταν ἐν τοῖς ἀηλιωτικοῖς τόποις, τουτέστι τοῖς ἀπὸ τοῦ μεσουρανήματος ἐπὶ τὸν ὠροσκόπον, ἢ ὁ ἀφέτης· καὶ τὸν οὐ μόνον εἰς τὰ ἐπόμενα ἀλλὰ καὶ τὸν<sup>1</sup> εἰς τὰ προηγούμενα κατὰ τὴν λεγομένην ὠριμαίαν, ὅταν ἐν τοῖς ἀποκεκλικόσι τοῦ μεσουρανήματος τόποις ἢ ὁ ἀφέτης.

Τούτων δὲ οὕτως ἐχόντων ἀναιρετικάι γίνονται μοῖραι κατὰ μὲν τὴν εἰς τὰ προηγούμενα τῶν ζωδίων ἄφεισιν ἢ τοῦ δυτικοῦ ὀρίζοντος μόνη διὰ τὸ ἀφανίζειν τὸν κύριον τῆς ζωῆς· αἱ δὲ τῶν οὕτως ὑπαντώντων ἢ μαρτυρούντων ἀστέρων ἀφαιροῦσι μόνον καὶ προστιθέασιν ἔτη τοῖς<sup>2</sup> μέχρι τῆς καταδύσεως τοῦ ἀφέτου συναγομένοις καὶ οὐκ ἀναιροῦσι διὰ τὸ μὴ αὐτοὺς ἐπιφέρεισθαι τῷ ἀφετικῷ τόπῳ ἀλλ' ἐκείνον τοῖς αὐτῶν· καὶ προστιθέασι μὲν οἱ ἀγαθοποιοί, ἀφαιροῦσι δὲ οἱ κακοποιοί, τοῦ Ἑρμοῦ<sup>3</sup> πάλιν ὅποτέροις ἂν αὐτῶν συσχηματισθῇ προστιθεμένου.<sup>4</sup> ὁ δὲ ἀριθμὸς τῆς προσθέσεως ἢ ἀφαιρέσεως θεωρεῖται διὰ τῆς καθ' ἕκαστον μοιροθεσίας· ὅσοι γὰρ ἂν ὦσιν ὠριαῖοι χρόνοι τῆς ἐκάστου μοίρας, ἡμέρας μὲν οὔσης οἱ

<sup>4</sup> προστιθεμένου VP (-τηθ-) LMADE, -ος NCam.

<sup>1</sup> On projection of rays (ἀκτινοβολία) see Bouché-Leclereq, pp. 247-250. The planets, by their rotation in their orbits moving, as the astrologers said, "from

the projection of rays,<sup>1</sup> when the prorogator is in the orient, that is, between mid-heaven and the horoscope. We must use not only the method that follows the order of following signs, but also that which follows the order of leading signs, in the so-called *Jorimaea*, when the prorogator is in places that decline from mid-heaven.<sup>2</sup>

This being the case, the destructive degrees in the prorogation that follows the order of leading signs are only the degree of the western horizon, because it causes the lord of life<sup>3</sup> to vanish; and the degrees of the planets that thus approach or bear witness<sup>4</sup> merely take away and add years to the sum of those as far as the setting of the prorogator, and they do not destroy because they do not move toward the prorogative place, but it moves toward them.<sup>5</sup> The beneficent stars add and the maleficent subtract. Mercury, again, is reckoned with the group to which he bears an aspect. The number of the addition or subtraction is calculated by means of the location in degrees in each case. For the entire number of years is the same as the number of hourly periods of each

right to left," "in the order of the following signs," "regard" those that precede them and "cast rays," like missiles, at those that follow them; always, however, if the action is to be effective, at the angle of one of the recognized aspects (opposition, quartile, etc., these two having the greatest offensive force).

<sup>2</sup> That is, in such cases either method may be used.

<sup>3</sup> The prorogator, which in this case moves toward the anaeretic place.

<sup>4</sup> Planets in aspect to one another are said to "bear witness."

<sup>5</sup> In this case the rays of the planets are cast away from the prorogator; Bouhé-Leclercq, p. 420.

### TETRABIBLOS III. 10

degree, hours of the day<sup>1</sup> when it is day and hours of the night when it is night; this must be our reckoning when they are in the orient, and subtraction must be made in proportion to their departure therefrom, until at their setting it becomes zero.

In the prorogation which follows the order of following signs, the places of the maleficent planets, Saturn and Mars, destroy, whether they are approaching bodily, or project their rays from any place whatever in quartile or in opposition, and sometimes too in sextile, upon the signs called "hearing" or "seeing"<sup>2</sup> on grounds of equality of power; and the sign that is quartile to the prerogative sign in the order of following signs likewise destroys. And sometimes, also, among the signs that ascend slowly the sextile aspect destroys, when it is afflicted,<sup>3</sup> and again among the signs that ascend rapidly the trine. When the moon is the prorogator, the place of the sun also destroys. For in a prorogation of this kind the approaches of planets avail both to destroy and to preserve, since these are

<sup>1</sup> "Hours" were merely twelfth parts of the day (sunrise to sunset) or of the night, and hence "hours of the day" are not of the same length as "hours of the night" except when day and night are equal.

<sup>2</sup> Cf. i. 15.

<sup>3</sup> See above, p. 267, concerning "affliction." Aries, Taurus, Gemini, Pisces, Aquarius, and Capricorn were classed as rapidly ascending signs; the others, as slowly ascending signs.

<sup>1</sup> In this type of prorogation the diurnal movement of the heavens is carrying the planets toward the prorogative

in the direction of the prorogative place.<sup>1</sup> However, it must not be thought that these places always inevitably destroy, but only when they are afflicted. For they are prevented both if they fall within the term<sup>2</sup> of a beneficent planet and if one of the beneficent planets projects its ray from quartile, trine, or opposition either upon the destructive degree itself or upon the parts that follow it, in the case of Jupiter not more than 12°, and in that of Venus not over 8°; also if, when both the prorogator and the approaching planet are present bodily, the latitude of both is not the same.<sup>3</sup> Thus when there are two or more on each side, assisting and, *vice versa*, destroying, we must consider which of them prevails, both by the number of those that co-operate and by power; by number when one group is perceptibly more numerous than the other, and with regard to power when some of the assisting or of the destroying planets are in their own proper places, and some are not, and particularly when some are rising and others setting. For in general we must not admit any planet, either to destroy or to aid, that is under the rays of the sun, except that when the moon is prorogator the place of the sun itself is destructive, when it is changed about by the presence

place; cf. Bouché-Leclercq, pp. 420-421 (esp. 421). He points out the complexity of the calculation and the multitude of choices that lay open to an astrologer in his interpretation of a geniture.

<sup>2</sup> See i. 20-21.

<sup>3</sup> This would be true only in cases of the bodily approach of planets, not in aspect. The notion is that the ray will not hit its mark if the two bodies are not in the same latitude.

## PTOLEMY

μένος μὲν ὑπὸ τοῦ συνόντος κακοποιῦ, ὑπὸ μηδενὸς δὲ τῶν ἀγαθοποιῶν ἀναλευμένος.<sup>1</sup>

<sup>1</sup> As the anonymous commentator says (p. 120, ed. Wolf), the sun is of a "middle temperature" (*κρᾶσις*), and takes the character, good or bad, of the planet associated with it; cf. i. 5 above.

<sup>2</sup> Some of the MSS. have *βοηθούμενος καὶ* (or *ἢ*) *ἀναλευμένος*, "assisted or released"; probably an explanatory gloss which worked its way into the text. The anonymous commentator explains the word to mean that a beneficent planet does not permit the sun to retain the "affliction" attached by the evil planet, but "releases" it.

<sup>3</sup> The following general description is intended to apply to Ptolemy's lengthy account of this method. In each prorogation, two points on the ecliptic are concerned, the prorogator or precedent and the subsequent or anaeretic place, which we may call P and S respectively. S may or may not be occupied by a planet, but in this type of prorogation it always follows P, that is, lies east of it and comes to the horizon later. P, as a point on the ecliptic, may (a) lie at the intersection of the ecliptic and the equator or

## TETRABIBLOS III. 10

of a maleficent planet <sup>1</sup> and is not released <sup>2</sup> by any of the beneficent ones.

However, the number of years, determined by the distances between the prorogative place and the destructive planet, ought not to be taken simply or off-hand, in accordance with the usual traditions, from the times of ascension of each degree, except only when the eastern horizon itself is the prorogator, or some one of the planets that are rising in that region. For one method alone <sup>3</sup> is available for him who is

be (b) north of the equator or (c) south of it. The vernal and autumnal equinoxes, the beginnings of Aries and Libra, are the only points of the ecliptic which can occupy position (a); if, however, P is one of these, since it is also a point on the equator, it will pass, like all points on the equator, from horizon to meridian in 6 hours, at the rate of 15° in 1 hour (this is the hour called "equinoctial hour" by the Greeks). If P is to the north of the equator, in a north latitude, its ascension from horizon to meridian will be along a path parallel to the equator and longer than the distance from horizon to meridian on the equator; hence it takes longer than 6 equinoctial hours. Conversely, points south of the equator take a shorter course and ascend in times correspondingly shorter than 6 equinoctial hours. Nevertheless, since the Greeks defined "day" as the period from sunrise to sunset and divided it into 12 hours, similarly dividing the night, the ascension of P from rising to culmination, wherever it is situated on the ecliptic and whatever the latitude, takes place in 6 hours of the day, that is, ordinary or civil (*καρπικαί*) hours, which may be longer or shorter than equinoctial hours, and equal to them only when P occupies position (a), described above. The "horary magnitude" or "period" of a point on the ecliptic is the expression in terms of equinoctial times (see p. 95, n. 2) of the length of the civil hour when the sun is at that point; in north latitudes, horary magnitudes are greater than 15 for points north of the equator and less

for points south, 15 being the horary magnitude of the two equinoctial points. All that has been said about P applies of course to S, which is another point on the ecliptic. The problem of prorogation is simply to discover after how many equinoctial periods or times S comes to the position originally occupied by P with relation to the meridian (or other centre, such as the western horizon). This position is defined as the one in which S is just as many civil hours removed from the meridian (or the point of reference) as was P in its original position.

considering this subject in a natural manner—to calculate after how many equinoctial periods <sup>1</sup> the place of the following body or aspect comes to the place of the one preceding at the actual time of birth, because the equinoctial periods pass evenly <sup>2</sup> through both the horizon and the mid-heaven, to both of which are referred the proportions of spatial distances, and, as is reasonable, each one of the periods has the value of one solar year.<sup>3</sup> Whenever the prorogative and preceding place is actually on the eastern horizon, we should take the times of ascension of the degrees up to the meeting-place; for after this number of equinoctial periods the destructive planet comes to the place of the prorogator, that is, to the eastern horizon. But when it <sup>4</sup> is actually at the mid-heaven, we should take the ascensions on the right sphere in which the segment <sup>5</sup> in each case passes mid-heaven; and when it is on

One therefore determines how far S was originally removed, how far it is removed when it comes to the position of P, and takes the difference, in equinoctial times, as the answer.

<sup>1</sup> An "equinoctial period" or "time" is the length of time which it takes one degree on the equator to pass a fixed point, *i.e.* 1/360 of 24 hours. An "equinoctial hour" is 15 "equinoctial times." For the definition *cf.* Heliodorus (?) in *CCAG*, vii. 122, 20 ff.

<sup>2</sup> At the rate of 15 per hour, in contrast to the varying horary periods of degrees on the ecliptic.

<sup>3</sup> In predicting the life of the subject of the horoscope. *Cf.* P. Mich. 149, col. xii. ll. 10-11.

<sup>4</sup> The prorogator.

<sup>5</sup> The "segment" is the arc (of the ecliptic) between the two places, but the ascension of the following body is to be measured on the right sphere; that is, it is right ascension, which is measured on the equator.

<sup>1</sup> Comes to the meridian in the same time, and is on the same side of the equator ("in the same direction"). Ptolemy introduces this characterization of "same and

the western horizon, the number in which each of the degrees of the interval descends, that is, the number in which those directly opposite them ascend. But if the precedent place is not on these three limits but in the intervals between them, in that case the times of the aforesaid ascensions, descensions, or culminations will not carry the following places to the places of the preceding, but the periods will be different. For a place is similar and the same if it has the same position<sup>1</sup> in the same direction with reference both to the horizon and to the meridian. This is most nearly true of those which lie upon one of those semicircles<sup>2</sup> which are described through the sections of the meridian and the horizon, each of which at the same position makes nearly the same temporal hour. Even as, if the revolution is upon the aforesaid arcs, it reaches the same position with reference to both the meridian and horizon, but makes the periods of the passage of the zodiac unequal with respect to either, in the same way also at the positions of the other distances it makes their

similar places” because the whole system of prorogation depends on determining the period after which a subsequent body will come to the same place as, or a similar place to, that occupied by a precedent body. It cannot come to exactly the same place, because both bodies are on the ecliptic, oblique to the equator. Hence it is necessary to define “similar places.”

<sup>2</sup> He refers to the arcs of circles, parallel to the equator, passing through the degree of the ecliptic in question, and cutting both horizon and meridian, which are intercepted between the horizon and the meridian.

θέσεις δι' ἀνίσων ἐκείνοις χρόνων τὰς παρόδους ἀπεργάζεται. μία δέ τις ἡμῖν ἔφοδος ἔστω<sup>1</sup> τοιαύτη, δι' ἧς, εἴαν τε ἀνατολικὴν εἴαν τε μεσημβρινὴν ἢ δυτικὴν, εἴαν τε ἄλλην τινὰ ἔχη θέσιν ὁ προηγούμενος τόπος, τὸ ἀνάλογον τῶν ἐπ' αὐτὸν φερόντων χρόνων τὸν ἐπόμενον τόπον ληφθήσεται. προδιαλαβόντες γὰρ τὴν μεσουρανοῦσαν τοῦ ζωδιακοῦ μοῖραν καὶ ἔτι τὴν τε προηγουμένην καὶ τὴν ἐπερχομένην, πρῶτον σκεψόμεθα τὴν τῆς προηγουμένης θέσιν, πόσας καιρικὰς ὥρας ἀπέχει τοῦ μεσημβρινοῦ, ἀριθμήσαντες τὰς μεταξύ αὐτῆς καὶ<sup>2</sup> τῆς μεσουρανούσης οἰκείως ἦτοι ὑπὲρ γῆν ἢ ὑπὸ γῆν μοίρας<sup>3</sup> ἐπ' ὀρθῆς τῆς σφαίρας ἀναφορὰς καὶ μερίσαντες εἰς τὸ πλῆθος τῶν αὐτῆς τῆς 136 προηγουμένης μοίρας ὠριαίων χρόνων, εἰ μὲν ὑπὲρ

<sup>1</sup> ἔστω VDProc. ; ἔσται PLMNAECam.

<sup>2</sup> καὶ om. LCam.

<sup>3</sup> μοίρας MAE, μοῖραν VPD, μ<sup>οῖ</sup> N, μεσουρανοῖ Cam.

<sup>1</sup> This obscure sentence is thus explained by the anonymous commentator : " If you imagine a star moving either from the horoscope (*sc.* to mid-heaven), or from mid-heaven to the horoscope, you will discover the temporal periods of the distance ; in the same way also when they are not upon the degrees of the angles."

<sup>2</sup> ὠριαῖοι χρόνοι ; the expression ὠριαῖον μέγεθος, " horary magnitude," is used further on, when Ptolemy gives examples. In the *Almagest*, ii. 8, there is a table which gives the time, in degrees and minutes of the equator (*i.e.* equinoctial times), in which each arc of 10° of the ecliptic rises above the horizon in each of eleven latitudes beginning with the equator (right sphere) ; the table also gives the cumulative sums of these ascensions for each arc from the beginning of Aries. In the following chapter Ptolemy tells how the horary magnitude may be determined

passages in times unequal to the former.<sup>1</sup> We shall therefore adopt one method only, as follows, whereby, whether the preceding place occupies the orient, the mid-heaven, the occident, or any other position, the proportionate number of equinoctial times that bring the following place to it will be apprehended. For after we have first determined the culminating degree of the zodiac and furthermore the degree of the precedent and that of the subsequent, in the first place we shall investigate the position of the precedent, how many ordinary hours it is removed from the meridian, counting the ascensions that properly intervene up to the very degree of mid-heaven, whether over or under the earth, on the right sphere, and dividing them by the amount of the horary periods<sup>2</sup> of the precedent degree, diurnal if it is

by the use of this table. His directions are, in brief, to take the sum of the ascensions for the degree of the sun by day (or the opposite degree by night) both in the right sphere and in the given latitude; to ascertain the difference between the two and take  $\frac{1}{6}$  of it; and then, if the degree was in the northern hemisphere, to add this fraction to the 15 "times" of one equinoctial hour, or, for a southern position, to subtract it. This will give the length of the ordinary or civil hour for the latitude and time of the year in question, in terms of the ascension of degrees of the equator, or "equinoctial times," or as Ptolemy puts it, "the number of (equinoctial) times of the civil hour under consideration." The civil day-time hour was  $\frac{1}{12}$  of the period from sunrise to sunset, or, of course,  $\frac{1}{6}$  of the time from sunrise to noon. In *Almagest*, ii. 9, Ptolemy gives the same directions for reducing periods expressed in equinoctial times to ordinary or civil hours; multiply the given equinoctial hours by 15 (in order to express them in "equinoctial times," as are the ascensions dealt with in the present passage) and divide by the horary period.

γῆν εἴη τῶν ἡμερησίων, εἰ δὲ ὑπὸ γῆν τῶν τῆς νυκτός. ἐπεὶ δὲ τὰ τὰς αὐτὰς καιρικὰς ὥρας ἀπέχοντα τοῦ μεσημβρινοῦ τμήματα τοῦ ζωδιακοῦ καθ' ἑνὸς καὶ τοῦ αὐτοῦ γίνεται τῶν προειρημένων ἡμικυκλίων, καὶ<sup>1</sup> δεήσει λαβεῖν μετὰ πόσους ἰσημερινούς χρόνους<sup>2</sup> καὶ τὸ ἐπόμενον τμήμα τὰς ἴσας καιρικὰς ὥρας ἀφέξει τοῦ αὐτοῦ μεσημβρινοῦ τῇ προηγουμένῃ. ταύτας δὲ διειληφότες ἐπισκεψόμεθα πόσους τε κατὰ τὴν ἐξ ἀρχῆς θέσιν ἀεῖχεν ἰσημερινούς χρόνους καὶ ἡ ἐπομένη μοῖρα τῆς κατὰ τὸ αὐτὸ μεσουράνημα διὰ τῶν ἐπ' ὀρθῆς πάλιν τῆς σφαίρας ἀναφορῶν, καὶ πόσους ὅτε τὰς ἴσας καιρικὰς ὥρας ἐποίει τῇ προηγουμένῃ· πολυπλασιάσαντές τε καὶ ταύτας ἐπὶ τὸ πλῆθος τῶν τῆς ἐπομένης μοίρας ὠριαίων χρόνων, εἰ μὲν πρὸς τὸ ὑπὲρ γῆν εἴη μεσουράνημα πάλιν ἡ σύγκρισις τῶν καιρικῶν ὠρῶν, τὸ<sup>3</sup> τῶν ἡμερησίων, εἰ δὲ πρὸς τὸ ὑπὸ γῆν τὸ τῶν τῆς νυκτός, καὶ τοὺς γινομένους ἐκ τῆς ὑπεροχῆς ἀμφοτέρων τῶν διαστάσεων λαβόντες ἔξομεν τὸ τῶν ζητουμένων ἐτῶν πλῆθος.<sup>4</sup>

above the earth and nocturnal if it is below. But since the sections of the zodiac which are an equal number of ordinary hours removed from the meridian lie upon one and the same of the aforesaid semi-circles, it will also be necessary to find after how many equinoctial periods the subsequent section will be removed from the same meridian by the same number of ordinary hours as the precedent.<sup>1</sup> When we have determined these, we shall inquire how many equinoctial hours at its original position the degree of the subsequent was removed from the degree at mid-heaven, again by means of ascensions in the right sphere, and how many when it made the same number of ordinary hours as the precedent, multiplying these into the number of the horary periods<sup>2</sup> of the degree of the subsequent; if again the comparison of the ordinary hours relates to the mid-heaven above the earth, multiplying into the number of diurnal hours, but if it relates to that below the earth, the number of nocturnal hours. And taking the results from the difference of the two distances, we shall have the number of years for which the inquiry was made.

To make this clearer, suppose that the precedent place is the beginning of Aries, for example, and the subsequent the beginning of Gemini, and the latitude that where the longest day is fourteen hours long,<sup>3</sup> and the horary magnitude of the beginning of Gemini

<sup>1</sup> For it will then have "come to the same place" that the precedent originally occupied.

<sup>2</sup> Or, horary magnitude.

<sup>3</sup> This is the latitude of lower Egypt; *cf. Almagest*, ii. 6, p. 108, 15 ff. (Heiberg), and the table in ii. 8, pp. 134-141.

is approximately 17 equinoctial times.<sup>1</sup> Assume first that the beginning of Aries is rising, so that the beginning of Capricorn is at mid-heaven, and let the beginning of Gemini be removed from the mid-heaven above the earth 148 equinoctial times.<sup>2</sup> Now since the beginning of Aries is six ordinary hours<sup>3</sup> removed from the diurnal mid-heaven, multiplying these into the 17 equinoctial times, which are the times of the horary magnitude of the beginning of Gemini, since the distance of 148 times relates to the mid-heaven above the earth, we shall have for this interval also 102 times. Hence, after 46 times, which is the difference, the subsequent place will pass to the position of the precedent. These are very nearly the equinoctial times of the ascension of Aries and Taurus, since it is assumed that the prorogative sign is the horoscope.

Similarly, let the beginning of Aries be at mid-heaven, so that at its original position the beginning of Gemini may be 58 equinoctial times<sup>4</sup> removed from the mid-heaven above the earth. Therefore, since at its second position the beginning of Gemini should be at mid-heaven, we shall have for the difference of the distances precisely this amount of 58 times,

<sup>1</sup> The method described in *Almagest*, ii. 9, cited above, applied to data from the table in *Almagest*, ii. 8, gives 17 times 6 min. 30 sec.

<sup>2</sup> This is reckoned on the right sphere. The data from the table in the *Almagest* will give 147 times 44 min.

<sup>3</sup> Likewise 6 equinoctial hours, since it is an equinoctial point.

<sup>4</sup> I.e. 148 minus 90.

### TETRABIBLOS III. 10

in which again, because the prorogative sign is at mid-heaven, Aries and Taurus<sup>1</sup> pass through the meridian.

In the same way let the beginning of Aries be setting, so that the beginning of Cancer may be at mid-heaven and the beginning of Gemini may be removed from the mid-heaven above the earth in the direction of the leading signs<sup>2</sup> by 32 equinoctial periods. Since, then, again the beginning of Aries is six ordinary hours removed from the meridian in the direction of the occident, if we multiply this by 17 we shall have 102 times, which will be the distance of the beginning of Gemini from the meridian when it sets. At its first position also it was distant from the same point 32 times; hence it moved to the occident in the 70 times of the difference, in which period also Aries and Taurus descend and the opposite signs Libra and Scorpio ascend.<sup>3</sup>

Now let it be assumed that the beginning of Aries is not on any of the angles, but removed, for example, three ordinary hours from the meridian in the direction of the leading signs, so that the 18th degree of Taurus is at mid-heaven, and in its first position the beginning of Gemini is 13 equinoctial times removed from the mid-heaven above the earth in the order of

<sup>1</sup> The table of the *Almagest* gives 45 times 5 min. for the combined ascensions of these two signs in the latitude of lower Egypt.

<sup>2</sup> *I.e.* beyond the meridian and toward Aries.

<sup>3</sup> The table of the *Almagest* gives 70 times 23 min.

οὖν πάλιν τοὺς ιζ' <sup>1</sup> χρόνους ἐπὶ τὰς γ' ὥρας πολλαπλασιάσωμεν, ἀφέξει μὲν καὶ κατὰ τὴν δευτέραν θέσιν ἢ τῶν Διδύμων ἀρχὴ τῆς μεσημβρίας εἰς τὰ

the following signs.<sup>1</sup> If, then, again we multiply 17 equinoctial times into the three hours, the beginning of Gemini will at its second position be distant from mid-heaven in the direction of the leading signs 51 equinoctial times, and it will make in all 64 times.<sup>2</sup> But it made 46 times by the same procedure when the prorogative place was rising, 58 when it was in mid-heaven, and 70 when it was setting. Hence the number of equinoctial times at the position between mid-heaven and the occident differs from each of the others. For it is 64, and the difference is proportional to the excess of three hours,<sup>3</sup> since this was 12 equinoctial times in the case of the other quadrants at the centres, but 6 equinoctial times in the case of the distance of three hours. And inasmuch as in all cases approximately the same proportion is observed, it will be possible to use the method in this simpler way. For again, when the precedent degree is at rising, we shall employ the ascensions up to the subsequent; if it is at mid-heaven, the degrees on the right sphere; and if it is setting, the descensions. But when it is between these points, for example, at the aforesaid interval from Aries, we shall take

<sup>1</sup> Thus, the first of Aries is west of the meridian and the first of Gemini east of it.

<sup>2</sup> *I.e.* 13 times to reach the meridian, plus 51 times beyond it.

<sup>3</sup> *I.e.* the centres are 6 hours removed from one another, and a difference of 12 times is observed when the movement of the subsequent place up to one of the centres is compared with its movement to the next centre in order. Hence when the prorogative place does not move between centre and centre, 6 hours, but only half of that time, this differential also will be only  $\frac{1}{2}$  of its full amount, 6 times instead of 12 times.

ἐπιβάλλοντας χρόνους ἑκατέρω<sup>1</sup> τῶν περιεχόντων<sup>2</sup> κέντρων, εὐρήσομεν δέ, ἐπειδὴ μετὰ τὸ μεσουράνημα τὸ ὑπὲρ γῆν ὑπέκειτο ἢ ἀρχὴ τοῦ Κριοῦ μεταξὺ τοῦ τε μεσουρανοῦντος κέντρου καὶ τοῦ δύνοντος, τοὺς ἐπιβάλλοντας χρόνους<sup>3</sup> μέχρι τῆς ἀρχῆς τῶν Διδύμων, τῶν μὲν συμμεσουρανήσεων νη', τῶν δὲ συγκαταδύσεων ο'. ἔπειτα μαθόντες,<sup>4</sup> ὡς προκίεται, πόσας καιρικὰς ὥρας ἀπέχει τὸ προηγούμενον τμήμα ὁποτέρου τῶν κέντρων, ὅσον<sup>5</sup> ἂν ὦσι μέρος αὐταὶ τῶν τοῦ τε τεταρτημορίου καιρικῶν ὥρῶν ἕξ, τοσοῦτον μέρος τῆς ἀμφοτέρων τῶν συναγωγῶν ὑπεροχῆς προσθήσομεν ἢ ἀφελούμεν τῶν συγκρινομένων κέντρων.<sup>6</sup> οἷον ἐπεὶ τῶν προκειμένων ο' καὶ νη'<sup>7</sup> ἢ ὑπεροχὴ ἐστὶ χρόνων ιβ', ὑπέκειτο δὲ τὰς ἴσας καιρικὰς ὥρας γ' ὁ προηγούμενος τόπος ἑκατέρου τῶν κέντρων ἀπέχων, αἱ εἰσι τῶν ἕξ ὥρῶν ἡμισυ μέρος, λαβόντες<sup>8</sup> καὶ τῶν ιβ' τὸ ἡμισυ καὶ ἦτοι τοῖς νη' προσθέντες ἢ τῶν ο' ἀφελόντες, εὐρήσομεν τὴν ἐπιβολὴν χρόνων ξδ'.<sup>9</sup> εἰ δέ γε δύο καιρικὰς ὥρας ἀπεῖχεν ὁπότερον τῶν κέντρων, αἱ εἰσι τῶν σ' ὥρῶν τρίτον μέρος,<sup>10</sup> τὸ τρίτον πάλιν τῶν τῆς ὑπεροχῆς ιβ' χρόνων, τουτέστι τοὺς δ', εἰ μὲν ἢ τῶν δύο ὥρῶν ἀποχὴ ἀπὸ τοῦ μεσουρανήματος

first the equinoctial times corresponding to each of the surrounding angles, and we shall find, since the beginning of Aries was assumed to be beyond the mid-heaven above the earth, between mid-heaven and the occident, that the corresponding equinoctial times up to the first of Gemini from mid-heaven are 58 and from the occident 70. Next let us ascertain, as was set forth above,<sup>1</sup> how many ordinary hours the precedent section is removed from either of the angles, and whatever fraction they may be of the six ordinary hours of the quadrant, that fraction of the difference between both sums we shall add to or subtract from the angle with which comparison is made. For example, since the difference between the above mentioned 70 and 58 is 12 times, and it was assumed that the precedent place was removed by an equal number of ordinary hours, three, from each of the angles, which are one half of the six hours, then taking also one-half of the 12 equinoctial times and either adding them to the 58 or subtracting them from the 70, we shall find the result to be 64 times. But if it was removed two ordinary hours from either one of the angles, which are one-third of the six hours, again we shall take one-third of the 12 times of the excess, that is, 4, and if the removal by two hours had been assumed to be from the mid-heaven, we would have added

<sup>1</sup> The prorogations, which are determined by the approach of the anaeretic place to that of the prorogator, or the setting of the prorogator.

them to the 58 times, but if it was measured from the occident we would have subtracted them from 70.

The method of ascertaining the amount of the temporal intervals ought in this way consistently to be followed. For the rest, we shall determine in each of the aforesaid cases of approach or setting,<sup>1</sup> in the order of those that ascend more rapidly, those which are destructive, climacteric, or otherwise transitional,<sup>2</sup> according as the meeting is afflicted or assisted in the way we have already explained,<sup>3</sup> and by means of the particular significance of the predictions made from the temporal ingresses of the meeting.<sup>4</sup> For when at the same time the places are afflicted and the transit of the stars relative to the ingress of the years of life afflicts the governing places, we must understand that death is definitely signified; if one of them is benignant, great and dangerous crises; if both are benignant, only sluggishness, injuries, or transitory disasters. In these matters the special quality is ascertained from the familiarity of the occurrent places with the circumstances of the nativity. Sometimes, when it is doubtful which ought to take over the destroying

<sup>2</sup> *I.e.* we shall discover whether the periods determined by such prorogations as have been described are terminated by actual death, some important crisis, or an event of less importance. *Cf.* Hephaestion ap. *CCAG*, viii. 2, p. 81, 1 ff.

<sup>3</sup> The reference is to what was said earlier in the chapter about the influence of the various planets; see pp. 281 ff.

<sup>4</sup> *Cf.* what is said about the chronocrators in the latter part of iv. 10.

power, there is nothing to prevent our calculating the occurrences of each and then either following, in predicting the future, the occurrences which most agree with past events, or observing them all, as having equal power, determining as before the question of their degree.

### 11. *Of Bodily Form and Temperament.*

Now that the procedure in the matter of the length of life has been explained, we speak about the form and character of the body, beginning the detailed discussion in the proper order, inasmuch as naturally, too, the bodily parts are formed prior to the soul; for the body, because it is more material, carries almost from birth the outward appearances of its idiosyncrasies, while the soul shows forth the characters conferred upon it by the first cause only afterwards and little by little, and external accidental qualities come about still later in time.

We must, then, in general observe the eastern horizon and the planets that are upon it or assume its rulership in the way already explained;<sup>1</sup> and in particular also the moon as well; for it is through the formative power of these two places<sup>2</sup> and of their rulers and through the mixture of the two kinds,<sup>3</sup>

<sup>1</sup> See iii. 2 (p. 233).

<sup>2</sup> The eastern horizon and the place where the moon is found.

<sup>3</sup> Apparently, the influence of the places and that of their rulers are the two "kinds" to which reference is made.

καὶ ἔτι τῆς τῶν συνανατελλόντων αὐτοῖς ἀπλανῶν ἀστέρων σχηματογραφίας τὰ περὶ τὰς διατυπώσεις τῶν σωμάτων θεωρεῖται, πρωτευόντων μὲν τῇ δυνάμει τῶν τὴν οἰκοδεσποτίαν ἔχόντων ἀστέρων, ἐπισυνεργούσης δὲ καὶ τῆς τῶν τόπων αὐτῶν ἰδιοτροπίας.

Τὸ μέντοι καθ' ἕκαστον, καὶ ὡς ἂν τις ἀπλῶς οὕτως ἀποδοίῃ, τοῦτον ἔχει τὸν τρόπον. πρῶτον γὰρ ἐπὶ τῶν ἀστέρων ὁ μὲν τοῦ Κρόνου ἀνατο-  
 143 λικὸς ὢν τὴν μὲν μορφήν μελίχροας ποιεῖ καὶ εὐεκτικὸς καὶ μελανότριχας καὶ οὐλοκεφάλους καὶ δασυστέρνους<sup>1</sup> καὶ μεσοφθάλμους<sup>2</sup> καὶ συμμέτρους τοῖς μεγέθεσι, τῇ δὲ κράσει τὸ μᾶλλον ἔχοντας ἐν τῷ ὑγρῷ καὶ ψυχρῷ· δυτικὸς δὲ ὑπάρχων τῇ μὲν μορφῇ μέλανας καὶ σπινώδεις καὶ μικροὺς καὶ ἀπλότριχας καὶ ὑποσίλους καὶ ὑπορρύθμους καὶ μελανοφθάλμους, τῇ δὲ κράσει τὸ<sup>3</sup> μᾶλλον ἔχοντας ἐν τῷ ξηρῷ καὶ ψυχρῷ.

Ὁ δὲ τοῦ Διὸς οἰκοδεσποτήσας τοὺς προκειμένους τόπους ἀνατολικὸς τῇ μὲν μορφῇ ποιεῖ λευκοὺς ἐπὶ τὸ εὐχρουν καὶ μεσότριχας καὶ μεγαλοφθάλμους<sup>4</sup> καὶ εὐμεγέθεις καὶ ἀξιωματικούς, τῇ δὲ κράσει τὸ πλέον ἔχοντας ἐν τῷ θερμῷ καὶ ὑγρῷ. δυτικὸς δὲ ὑπάρχων τῇ μὲν χροᾷ λευκοὺς μὲν, οὐκ ἐπὶ τὸ εὐχρουν δὲ ὁμοίως·<sup>5</sup> τετανότριχάς τε ἢ καὶ ἀναφαλάκρους<sup>6</sup> καὶ μεσοφαλάκρους καὶ μετρίους τοῖς

### TETRABIBLOS III. 11

and furthermore through the forms of the fixed stars that are rising at the same time, that the conformation of the body is ascertained; the ruling planets have most power in this matter and the special characters of their places aid them.

The detailed account, then, as one might report it in simple terms, is this: First, among the planets, Saturn, if he is in the orient, makes his subjects in appearance dark-skinned, robust, black-haired, curly-haired, hairy-chested, with eyes of moderate size, of middling stature, and in temperament having an excess of the moist and cold. If Saturn is setting, in appearance he makes them dark, slender, small, straight-haired, with little hair on the body, rather graceful, and black-eyed; in temperament, sharing most in the cold and dry.

Jupiter, as the ruler of the aforesaid regions, when he is rising, makes his subjects in appearance light of skin, but in such a way as to have a good colour, with moderately curling hair and large eyes, tall, and commanding respect; in temperament they exceed in the hot and the moist. When Jupiter is setting, he makes his subjects light, to be sure, but not as before, in such a way as to give them a good colour, and with lank hair or even bald in front and on the

crown, and of average stature ; in temperament they have an excess of the moist.

Similarly, Mars, when rising, makes his subjects in appearance red and white of complexion, tall and robust, gray-eyed, with thick hair, somewhat curly, and in temperament showing an excess of the warm and dry. When he is setting, he makes them in appearance simply ruddy, of middle height, with small eyes, not much hair on the body, and straight yellow hair ; their temperament exceeds in the dry.

Venus has effects similar to Jupiter's, but is apt to make her subjects more shapely, graceful, womanish, effeminate in figure, plump, and luxurious. On her own proper account she makes the eyes bright as well as beautiful.

Mercury, in the orient, makes his subjects in appearance sallow, of moderate height, graceful, with small eyes and moderately curling hair ; in temperament, showing an excess of the warm. In the occident he makes them, in appearance, of light but not of good colouring, with straight hair and olive complexion, lean and spare, with glancing, brilliant eyes,<sup>1</sup> and somewhat ruddy ; in temperament they exceed in the dry.

<sup>1</sup> See i. 24.

<sup>2</sup> Probably a reference to the last paragraph of i. 10, but the anonymous commentator (p. 136, ed. Wolf) seems to think it refers to i. 8.

<sup>3</sup> The commentator's (*l.c.*) explanation of this phrase is "being oriental" (ἀνατολικοὶ τυχόντες). The φάσεις,

The luminaries assist each of these when they bear an aspect to them, the sun tending to a more impressive and robust effect, and the moon, especially when she is separating<sup>1</sup> from the planets, in general tending toward better proportion and greater slenderness, and toward a more moist temperament; but in particular cases her effect is proportioned to the special quality of her illumination, in accordance with the system of intermixture explained in the beginning of the treatise.<sup>2</sup>

Again, generally, when the planets are morning stars and make an appearance,<sup>3</sup> they make the body large; at their first station, powerful and muscular; when they are moving forward,<sup>4</sup> not well-proportioned; at their second station, rather weak; and at setting, entirely without repute but able to bear hardship and oppression.

Likewise their places, as we have said,<sup>5</sup> take an important part in the formation of the bodily characters and temperaments. In general terms, once more, the quadrant from the spring equinox to the summer solstice makes the subjects well-favoured in complexion, stature, robustness, and eyes, and exceeding

“appearances,” “phases,” are the positions of the planets with respect to the sun.

<sup>1</sup> Strangely enough, according to the ancient terminology, when the planets are “moving forward” (in the direction of the diurnal movement, “in the direction of the leading signs,” or east to west) they are “retreating” (ἀναποδίζοντες) with respect to their (west to east) motion in their own orbits; cf. Bouché-Leclercq, p. 429, 1 (on this passage) and p. 117, 1. The commentator (*l.c.*) here says, *τούτέστιν, ἀφαιρητικοί* (probably ἀφαιρητικοί should be read).

<sup>2</sup> He refers to places in the zodiac and to i. 10.

καὶ θερμῶ· τὸ δ' ἀπὸ θερινῆς τροπῆς μέχρι μετοπωρινῆς ἰσημερίας μεσόχροας συμμέτρους τοῖς μεγέθεσιν εὐέκτας μεγαλοφθάλμους<sup>1</sup> δασεῖς οὐλότριχας, τὸ πλεόν ἔχοντας ἐν τῷ θερμῷ καὶ ξηρῷ· τὸ δ' ἀπὸ μετοπωρινῆς ἰσημερίας μέχρι χειμερινῆς τροπῆς μελίχροας ἰσχνούς σπινώδεις παθηνούς<sup>2</sup> μεσότριχας εὐοφθάλμους, τὸ πλεόν ἔχοντας ἐν τῷ ξηρῷ καὶ ψυχρῷ. τὸ δ' ἀπὸ χειμερινῆς τροπῆς ἕως ἑαρινῆς ἰσημερίας μελανόχροας συμμέτρους τοῖς μεγέθεσι τετανότριχας ὑποψίλους ὑπορῦθμους,<sup>3</sup> τὸ πλεόν ἔχοντας ἐν τῷ ὑγρῷ καὶ ψυχρῷ.

Κατὰ μέρος δὲ τὰ μὲν ἀνθρωποειδῆ τῶν ζωδίων τῶν τε ἐν τῷ ζωδιακῷ καὶ τῶν ἐκτὸς εὐρυθμα καὶ σύμμετρα τοῖς σχήμασι τὰ σώματα κατασκευάζει. τὰ δ' ἑτερόμορφα μετασχηματίζει πρὸς τὸ τῆς ἰδίας μορφώσεως οἰκείον τὰς τοῦ σώματος συμ-  
 146 μετρίας καὶ κατὰ τινα λόγον ἀφομοιοῖ τὰ οἰκεία μέρη τοῖς ἑαυτῶν, ἥτοι ἐπὶ τὸ μείζον καὶ ἔλαττον ἢ ἐπὶ τὸ ἰσχυρότερον καὶ ἀσθενέστερον<sup>4</sup> ἢ ἐπὶ τὸ εὐρυθμώτερον καὶ ἀρρυθμώτερον·<sup>5</sup> ἐπὶ τὸ μείζον μὲν ὡς λόγου ἔνεκεν ὁ Λέων καὶ ἡ Παρθένος καὶ ὁ Τοξότης, ἐπὶ τὸ ἔλαττον δὲ ὡς οἱ Ἴχθῦς καὶ ὁ Καρκίνος καὶ ὁ Αἰγόκερως. καὶ πάλιν ὡς<sup>6</sup> τοῦ Κριοῦ καὶ τοῦ Ταύρου καὶ τοῦ Λέοντος τὰ μὲν ἄνω καὶ ἐμπρόσθια ἐπὶ τὸ εὐεκτικώτερον, τὰ δὲ κάτω καὶ ὀπίσθια ἐπὶ τὸ ἀσθενέστερον· τὸ δ' ἐναντίον ὡς τὸ

<sup>1</sup> μεγαλοφθάλμους VDProc., μελανοφθάλμους MNAECam., ὑοφθάλμους P, εὐθάλμους L.

in the moist and warm. The quadrant from the summer solstice to the autumn equinox produces individuals with moderately good complexion and moderate height, robust, with large eyes and thick and curly hair, exceeding in the warm and dry. The quadrant from the autumn equinox to the winter solstice makes them sallow, spare, slender, sickly, with moderately curling hair and good eyes, exceeding in the dry and cold. The quadrant from the winter solstice to the spring equinox produces individuals of dark complexion, moderate height, straight hair, with little hair on their bodies, somewhat graceful, and exceeding in the cold and moist.

In particular, the constellations both within and outside of the zodiac which are of human shape produce bodies which are harmonious of movement and well-proportioned ; those however which are of other than human shape modify the bodily proportions to correspond to their own peculiarities, and after a fashion make the corresponding parts like their own, larger and smaller, or stronger and weaker, or more and less graceful. For example, Leo, Virgo, and Sagittarius make them larger ; others, as Pisces, Cancer, and Capricorn, smaller. And again, as in the case of Aries, Taurus, and Leo, the upper and fore parts make them more robust and the lower and hind parts weaker. Conversely the fore parts of

Sagittarius, Scorpio, and Gemini cause slenderness and the hind parts robustness. Similarly too Virgo, Libra, and Sagittarius tend to make them well-proportioned and graceful, while Scorpio, Pisces, and Taurus bring about awkwardness and disproportion. So it is with the rest, and it is fitting that we should observe and combine all these things and make a conjecture as to the character which results from the mixture, with regard both to the form and to the temperament of the body.

### 12. *Of Bodily Injuries and Diseases.*

Since the subject which comes next is that which treats of the injuries and diseases of the body, we shall attach here in regular order the method of investigation devised for this form of query. It is as follows. In this case also, to gain a general comprehension, it is necessary to look to the two angles of the horizon, that is, the orient and the occident, and especially to the occident itself and the sign preceding it, which is disjunct<sup>1</sup> from the oriental angle. We must also observe what aspect the maleficent planets bear to them. For if they, one or both of them, are stationed against the ascending degrees of the aforesaid

<sup>1</sup> See i. 16; this sign is the fifth from the ascendant and is the so-called sixth house.

ἦτοι σωματικῶς ἢ τετραγωνικῶς ἢ καὶ κατὰ διάμετρον, ἦτοι ὀπότερος αὐτῶν ἢ καὶ ἀμφοτέροι, σίνη καὶ πάθη σωματικὰ περὶ τοὺς γεννωμένους ὑπονοητέον, μάλιστα δ' ἂν καὶ τῶν φωτῶν ἦτοι τὸ ἕτερον ἢ καὶ ἀμφοτέρα κεκεντρωμένα καθ' ὃν εἰρήκαμεν τρόπον τυγχάνη ἢ ἅμα ἢ κατὰ διάμετρον. τότε γὰρ οὐ μόνον ἐὰν ἐπαναφέρηται τις τῶν κακοποιῶν, ἀλλὰ καὶν προαναφέρηται τῶν φωτῶν, αὐτὸς κεκεντρωμένος, ἱκανός ἐστι διαθεῖναι τι τῶν ἐκκειμένων ὅποιον ἂν οἷ τε τοῦ ὀρίζοντος τόποι καὶ οἱ τῶν ζωδίων ὑποφαίνωσι σίνος ἢ πάθος, καὶ αἱ τῶν ἀστέρων φύσεις τῶν τε κακούντων καὶ τῶν κακούμενων καὶ ἔτι τῶν συσχηματιζομένων αὐτοῖς. τά τε γὰρ μέρη τῶν ζωδίων ἐκάστου τὰ περιέχοντα τὸ ἀδικούμενον μέρος τοῦ ὀρίζοντος δηλώσει τὸ μέρος τοῦ σώματος περὶ ὃ ἔσται τὸ αἷτιον καὶ πότερον σίνος ἢ πάθος ἢ καὶ ἀμφοτέρα τὸ δηλούμενον μέρος ἐπιδέξασθαι δυνατόν, αἶ τε τῶν ἀστέρων φύσεις τὰ εἶδη καὶ τὰς αἰτίας τῶν συμπτωμάτων ποιούσιν,<sup>1</sup> ἐπειδὴ τῶν κυριωτάτων τοῦ ἀνθρώπου μερῶν ὁ μὲν τοῦ Κρόνου κύριός ἐστιν ἀκοῶν τε δεξιῶν καὶ σπληνὸς καὶ κύστεως καὶ φλέγματος καὶ ὀστέων · ὁ δὲ τοῦ Διὸς ἀφῆς τε καὶ πνεύμονος καὶ ἀρτηριῶν καὶ σπέρματος · ὁ δὲ τοῦ Ἄρεως ἀκοῶν εὐωνύμων καὶ νεφρῶν καὶ φλεβῶν καὶ μορίων · ὁ δὲ ἥλιος ὀράσεως καὶ ἐγκεφάλου καὶ καρδίας καὶ νεύρων καὶ τῶν δεξιῶν πάντων · ὁ δὲ τῆς Ἀφροδίτης ὀσφρήσεως τε καὶ ἥπατος καὶ

<sup>1</sup> ποιούσιν VPLADProc., om. MNECam.

places, either bodily on them or quartile or in opposition to them, we must conclude that the subjects born will suffer bodily injuries and disease, especially if either one or both of the luminaries as well chance to be angular in the manner described,<sup>1</sup> or in opposition. For in that case not only if one of the maleficent planets is rising after the luminaries, but even if it is rising before them and is itself angular, it has power to produce one of the aforesaid injuries or diseases of such kind as the places of the horizon and of the signs may indicate, likewise what is indicated by the natures of the afflicting and the afflicted<sup>2</sup> planets, and moreover by those that bear an aspect toward them. For the parts of the individual signs of the zodiac which surround the afflicted portion of the horizon will indicate the part of the body which the portent will concern, and whether the part indicated can suffer an injury or a disease or both, and the natures of the planets produce the kinds and causes of the events that are to occur. For, of the most important parts of the human body, Saturn is lord<sup>3</sup> of the right ear, the spleen, the bladder, the phlegm, and the bones; Jupiter is lord of touch, the lungs, arteries, and semen; Mars of the left ear, kidneys, veins, and genitals; the sun of the sight, the brain, heart, sinews and all the right-hand parts; Venus of

<sup>1</sup> *I.e.* in either the first or seventh house (orient or occident), and not at either of the other two angles.

<sup>2</sup> See on iii. 9 (p. 267).

<sup>3</sup> A planetary melothesia (distribution of parts of the body to the planets) follows. On such *cf.* Boll-Bezold-Gundel, p. 138, and P. Mich. 149, col. ii., 31 ff. (University of Michigan Studies, Humanistic Series, vol. xl.)

σαρκῶν · ὁ δὲ τοῦ Ἑρμοῦ λόγου καὶ διανοίας καὶ γλώσσης καὶ χολῆς καὶ ἔδρας · ἡ δὲ σελήνη γεύσεώς τε καὶ καταπόσεως καὶ στομάχου καὶ κοιλίας καὶ μήτρας καὶ τῶν εὐωνύμων πάντων.

"Ἔστι δὲ τῶν καθ' ὄλου καὶ τὰ σίνη μὲν ὡς ἐπὶ τὸ πολὺ συμπίπτειν ἀνατολικῶν ὄντων τῶν τὸ αἴτιον ποιούντων κακοποιῶν, πάθη δὲ τὸναντίον δυτικῶν αὐτῶν ὑπαρχόντων · ἐπειδήπερ καὶ διώριστα τούτων ἐκάτερον τῶ τὸ μὲν σίνος ἅπαξ διατιθέναι καὶ μὴ διατείνουσιν ἔχειν τὴν ἀληθόνα, τὸ δὲ πάθος ἦτοι συνεχῶς ἢ ἐπιληπτικῶς τοῖς πάσχουσιν ἐπισκῆπτειν.

<sup>1</sup> καθ' (ἐ)αυτὴν VPADEProc., καθ' ἑαυτοὺς L, κατ' αὐτὴν MNCam.; post haec verba add. ἐκτροπήν Cam., om. libri Proc.

smell, the liver, and the flesh; Mercury of speech and thought, the tongue, the bile, and the buttocks; the moon of taste and drinking, the stomach, belly, womb, and all the left-hand parts.

For the most part it is a general principle that injuries occur when the significant maleficent planets are oriental, and diseases, conversely, when they are setting. The reason for this is that these two things are distinguished thus—an injury affects the subject once for all and does not involve lasting pain, while disease bears upon the patient either continuously or in sudden attacks.

For the purpose of ascertaining particulars, certain configurations significant of injury or sickness have been specially observed, by means of the events which generally accompany such positions of the stars. For blindness in one eye is brought about when the moon by itself is upon the aforesaid angles, or is in conjunction, or is full, and when it is in another aspect that bears a relation to the sun, but applies to one of the star clusters in the zodiac, as for example to the cluster in Cancer, and to the Pleiades of Taurus, to the arrow point of Sagittarius, to the sting of Scorpio, to the parts of Leo around the Coma Berenices, or to the pitcher of Aquarius;

### TETRABIBLOS III. 12

and whenever Mars or Saturn moves toward the moon, when it is angular and waning and they are rising, or again when they ascend before the sun, being themselves angular. But if they are in aspect with both luminaries at once, either in the same sign or in opposition, as we said, morning stars with respect to the sun and evening stars to the moon, they will affect both eyes; for Mars brings about blindness from a blow, a thrust, iron, or burning; when he has Mercury in aspect, in palaestras and gymnasiums or by felonious attack. Saturn causes it by suffusion, cold, glaucoma, and the like. Again if Venus is upon one of the aforesaid angles, particularly the occident, if she is joined with Saturn or is in aspect with him or has exchanged houses, and is inferior to Mars or has him in opposition, the men who are born are sterile, and the women are subject to miscarriages, premature births, or even to embryotomies, particularly in Cancer, Virgo, and Capricorn.<sup>1</sup> And if the moon at rising applies to Mars, and if she also bears the same aspect to Mercury that Saturn does, while Mars again is elevated above her or is in opposition, the children born are eunuchs or

<sup>1</sup>Certain MSS. here add, "when the moon applies to the star clusters she incapacitates the eyes," which, as Camerarius notes in the margin of the second edition, is redundant here.

hermaphrodites or have no ducts and vents.<sup>1</sup> Since this is so, when the sun also is in aspect, if the luminaries and Venus are made masculine, the moon is waning, and the maleficent planets are approaching in the succeeding degrees, the males that are born will be deprived of their sexual organs or injured therein, particularly in Aries, Leo, Scorpio, Capricorn, and Aquarius, and the females will be childless and sterile. Sometimes those who have such genitures continue not without injury to the sight also; but those suffer impediment of speech, lisp, or have difficulty in enunciation who have Saturn and Mercury joined with the sun at the aforesaid angles, particularly if Mercury is also setting and both bear some aspect to the moon. When Mars is present with them he is generally apt to loosen the impediment to the tongue, after the moon meets him. Again, if the luminaries, together or in opposition, move toward the maleficent planets upon the angles, or if the maleficent planets move toward the luminaries, particularly when the moon is at the nodes<sup>2</sup> or her bendings, or in the injurious signs such as Aries, Taurus, Cancer, Scorpio, or Capricorn, there come about deformations of the body such as hunchback,

<sup>1</sup> Proclus paraphrases thus: ἡ μὴ ἔχοντες τρυπήματα μηδὲ διέξοδον.

<sup>2</sup> The points at which the moon's path intersects the ecliptic. The "bendings" are the points quartile to the nodes (*cf.* the anonymous commentator, p. 139, ed. Wolf).

<sup>3</sup> μελαγχολικοὺς om. Cam.

crookedness, lameness, or paralysis, congenital if the maleficent planets are joined with the luminaries, but if they are at the mid-heaven points, elevated above the luminaries or in opposition one to the other, the deformations will result from serious dangers, such as falls from a height, the collapse of houses, or the attacks of robbers or animals. If Mars prevails, the danger is from fire, wounds, bilious attacks, or robberies; if it is Saturn, through collapse of buildings, shipwreck, or spasms.

For the most part injuries come about when the moon is near the solstitial or equinoctial signs, particularly at the spring equinox, injuries by white leprosy; at the summer solstice, by lichens; at the fall equinox, by leprosy; at the winter solstice, by moles and the like. Diseases are likely to result when at the positions already described the maleficent planets are in aspect, but in the opposite sense, that is, evening stars with respect to the sun and morning stars to the moon. For in general Saturn causes his subjects to have cold bellies, increases the phlegm, makes them rheumatic, meagre, weak, jaundiced, and prone to dysentery, coughing, raising, colic, and elephantiasis; the females he makes also subject to diseases of the womb. Mars causes men to spit blood, makes them melancholy, weakens their lungs, and causes the itch or scurvy; and furthermore he causes them to be constantly irritated by cutting or cautery of the secret parts because of fistulas, hæmorrhoids,

or tumours, or also burning ulcers, or eating sores; he is apt to afflict women furthermore with miscarriages, embryotomies, or corrosive diseases. Of themselves, they also bring about the properties of disease in agreement with the natures, which have been already discussed, of the planets in aspect, as they relate to the parts of the body.<sup>1</sup>

Mercury assists them<sup>2</sup> chiefly to prolong the evil effects, when he is allied with Saturn inclining toward cold and continually stirring into activity rheumatisms and gatherings of fluid, particularly about the chest, throat, and stomach. When he is allied with Mars he adds his force to produce greater dryness, as in cases of ulcerous sore eyes, eschars,<sup>3</sup> abscesses, erysipelas, savage lichens or skin eruptions, black bile, insanity, the sacred disease,<sup>4</sup> or the like.

Certain qualities of disease are determined by changes among the zodiacal signs which surround the aforesaid configurations on the two angles. For in particular Cancer, Capricorn, and Pisces, and in general the terrestrial and piscine signs, cause diseases involving eating sores, lichens, scales, scrofula, fistulas, elephantiasis, and the like. Sagittarius and Gemini are responsible for those that come

<sup>1</sup> The reference is to the planetary melothesia, earlier in the chapter (p. 319). Acting in their own proper characters (*ιδίως*), the maleficent planets will affect those parts of the body of which, in the melothesia, they were said to be the "lords".

about with falling fits or epileptic seizures. And when the planets are in the last degrees of the signs they cause diseases and injuries especially in the extremities, through lesions or rheumatism, from which elephantiasis and, in general, gout in the feet and hands result. Since this is the case, if no beneficent planet bears an aspect to the maleficent ones which furnish the cause, or to the luminaries on the centres, the injuries and diseases will be incurable and painful; so also, if they bear an aspect but the maleficent planets are in power and overcome them. But if the beneficent planets are themselves in the authoritative positions and overcome the maleficent planets that bear the responsibility for the evil, then the injuries are not disfiguring and do not entail reproach and the diseases are moderate and yield to treatment, and sometimes they may be easily cured, if the beneficent planets are rising. For Jupiter generally causes the injuries to be concealed by human aid through riches or honours, and the diseases to be mitigated; and in company with Mercury he brings this about by drugs and the aid of good physicians. And Venus contrives that through pronouncements of the gods and oracles the blemishes shall be, in a way, comely and attractive,<sup>1</sup> and that the diseases shall be readily moderated by divine healing; if however Saturn is by, the healing will be accompanied by exhibition and

<sup>1</sup> Cf. the famous passage of the *Republic* (474DE) in which Plato tells how lovers praise the irregular features and the complexions of their favourites.

confession of the disease,<sup>1</sup> and such like, but if Mercury<sup>2</sup> is joined with her it will be with the accrual of use and gain, through the injuries and diseases themselves, to those that have them.

### 13. *Of the Quality of the Soul.*

The character, then, of the inquiry into bodily affections would be of this sort. Of the qualities of the soul, those which concern the reason and the mind are apprehended by means of the condition of Mercury observed on the particular occasion; and the qualities of the sensory and irrational part are discovered from the one of the luminaries which is the more corporeal, that is, the moon, and from the planets which are configured with her in her separations and applications.<sup>3</sup> But since the variety of the impulses of the soul is great, it stands to reason that we would make such an inquiry in no simple or offhand manner, but by means of many complicated observations. For indeed the differences between the signs which contain Mercury and the moon, or the planets that dominate them, can contribute much to the character of the soul; so likewise do the aspects to the sun and the angles shown by the planets that are related to the class of qualities under consideration, and, furthermore,

<sup>1</sup>The commentator (p. 141, ed. Wolf) says that this refers to the custom of taking the sick to temples for healing. So the disease would be openly exhibited and spoken of. Proclus indicates that the cure is through display and confession.

<sup>2</sup>Hermes (Mercury) was the god of commerce and gain.

<sup>3</sup>*Cf.* i. 24.

### TETRABIBLOS III. 13

that peculiar natural quality of each one of the planets which relates to the movements of the soul.

Of the signs of the zodiac in general, then, the solstitial signs produce souls fitted for dealing with the people, fond of turbulence and political activity, glory-seeking, moreover, and attentive to the gods, noble, mobile, inquisitive, inventive, good at conjecture, and fitted for astrology and divination. The bicorporeal signs make souls complex, changeable, hard to apprehend, light, unstable, fickle, amorous, versatile, fond of music, lazy, easily acquisitive, prone to change their minds. The solid signs make them just, unaffected by flattery, persistent, firm, intelligent, patient, industrious, stern, self-controlled, tenacious of grudges, extortionate, contentious, ambitious, factious, grasping, hard, inflexible.

Of configurations, positions in the orient and at the horoscope, and in particular those which are in proper face,<sup>1</sup> produce liberal, simple, self-willed, strong, noble, keen, open souls. Morning stations and culminations make them calculating, patient, of good memory, firm, intelligent, magnanimous, accomplishing what they desire, inflexible, robust, rough, not readily deceived, critical, practical, prone to inflict punishment, gifted with understanding. Precessions<sup>2</sup> and settings make them easily changed,

<sup>1</sup> See i. 23.

<sup>2</sup> The advances of a planet, as opposed to its retrograde movement (*ἀναποδισμός*) or its stations (*στηριγμοί*); cf. Bouché-Leclercq, p. 111. The term can be ambiguous; see on c. 11 above (p. 313).

ἀβεβαίους, ἀσθενεῖς, ἀφερεπόνους, ἐμπαθεῖς, ταπεινάς, δειλάς, ἀμφιβόλους, θρασυδείλους, ἀμβλείας, βλακώδεις, δυσκινήτους · οἱ δὲ ἐσπέριοι στηριγμοὶ καὶ αἱ ὑπὸ γῆν μεσουρανήσεις, ἔτι δὲ καὶ ἐφ' Ἑρμοῦ καὶ Ἀφροδίτης ἡμέρας μὲν αἱ ἐσπέρια δύσεις, νυκτὸς δὲ αἱ ἑῶι, εὐφυεῖς μὲν καὶ φρενήρεις,<sup>1</sup> οὐκ ἄγαν δὲ μνημονικὰς<sup>2</sup> οὐδ' ἐπιμόχθους καὶ φιλοπόνους, διερευνητικὰς δὲ τῶν ἀποκρύφων καὶ ζητητικὰς τῶν ἀθεωρήτων, οἷον μαγικὰς, μυστηριακὰς, μετεωρολογικὰς, ὀργανικὰς, μηχανικὰς, θαυματοποιούς, ἀστρολογικὰς, φιλοσόφους, οἰωνοσκοπικὰς, ὀνειροκριτικὰς καὶ τὰς ὁμοίας.

Πρὸς τούτοις δὲ<sup>3</sup> ἐν ἰδίοις μὲν ἢ καὶ οἰκείοις ὄντες τόποις καὶ αἰρήσεσιν οἱ τὴν κυρίαν ἔχοντες τῶν ψυχικῶν, καθ' ὃν ἐν ἀρχῇ διωρισάμεθα τρόπον, προφανῆ καὶ ἀπαραπόδιστα καὶ ἀνθέκαστα καὶ ἐπιτευκτικὰ ποιοῦσι τὰ ἰδιώματα, καὶ μάλισθ' ὅταν οἱ αὐτοὶ τῶν δύο τόπων ἐπικρατήσωσιν ἅμα, τουτέστι<sup>4</sup> τῷ μὲν τοῦ Ἑρμοῦ ὀπωσδήποτε τυγχάνωσι<sup>5</sup> συνεσχηματισμένοι, τὴν δὲ τῆς σελήνης ἀπόρροϊαν ἢ καὶ συναφὴν ἐπέχοντες · μὴ οὕτω δὲ διακείμενοι ἀλλ' ἐν ἀνοικείοις ὄντες τόποις, τὰ μὲν τῆς ἑαυτῶν φύσεως οἰκεῖα πρὸς τὴν ψυχικὴν ἐνέργειαν ἀνεπίφαντα καὶ ἀμαυρὰ καὶ ἀτελείωτα καὶ ἀπρόκοπα καθιστᾶσι.

unstable, weak, unable to bear labour, emotional, humble, cowardly, deceitful, bullying, dull, slow-witted, hard to arouse. Evening stations and position at mid-heaven beneath the earth, and furthermore, in the case of Mercury and Venus, by day evening settings and by night morning settings, produce souls noble and wise, but with mediocre memory, not painstaking nor fond of labour, but investigators of hidden things and seekers after the unknown, as for example magicians, adepts in the mysteries, meteorologists, makers of instruments and machines, conjurors, astrologers, philosophers, readers of omens, interpreters of dreams, and the like.

When, in addition, the governors of the soul, as we explained at the beginning, are in their own or familiar houses or sects,<sup>1</sup> they make the characters of the soul open, unimpeded, spontaneous, and effective, especially when the same planets rule the two places at once, that is, when they are configured to Mercury in any aspect whatever, and hold the separation or application of the moon;<sup>2</sup> if they are not so disposed, however, but are in places alien to them, it renders the properties of their own natures obscure, indistinct, imperfect, and ineffective with respect to the active quality of the soul. The powers, however, of the nature of the planets that dominate

<sup>1</sup>The governors of the soul are Mercury and the moon. For the houses, see i. 17, and for the sects, i. 7 and 12.

<sup>2</sup>That is, when the moon is separating from them or applying to them.

### TETRABIBLOS III. 13

or overcome<sup>1</sup> them are vigorous and injurious to the subjects. Thus men who, by reason of the familiarity of the maleficent planets, are unjust and evil, find their impulse to injure one another easy, unimpeded, secure, and honourable, if those planets are in power; but if they are overcome by planets of the opposite sect, the men are lethargic, ineffective, and easily punished. And those again that through the familiarity of the beneficent planets to the afore-said boundaries are good and just, if these planets are not overcome, are themselves happy and bear a good repute for their kindness to others, and, injured by none, continue to benefit from their own justice; if, however, the good planets are dominated by opposites, simply because of their gentleness, kindness, and compassion, they suffer from contempt and reproach or even may easily be wronged by most people.

This, then, is the general method of inquiry as to character. We shall next briefly consider, in due order, the particular traits resulting from the very nature of the planets, in this kind of domination, until the theory of mixture has been treated in its most important aspects.

If Saturn alone is ruler of the soul and dominates Mercury and the moon, if he has a dignified position

<sup>1</sup>On the expression "overcome," see above, on iii. 4, p. 245. Planets would "dominate" the governors of the soul (Mercury and the moon) by exercising rulership (*οἰκοδεσποτία*) over the portion of the zodiac occupied by the governors; this could be done in any of the five ways specified by Ptolemy in iii. 2 (p. 233).

158 καὶ τῆς σελήνης, ἐὰν μὲν ἐνδόξως ἔχη πρὸς τε τὸ κοσμικὸν καὶ τὰ κέντρα, ποιεῖ φιλοσωμάτους, ἰσχυρογνώμονας, βαθύφρονας, αὐστηροῦς, μονογνώμονας, ἐπιμόχθους, ἐπιτακτικούς, κολαστικούς, περιουσιαστικούς, φιλοχρημάτους, βιαίους, θησαυριστικούς, φθονερούς. ἐναντίως δὲ καὶ ἀδόξως κείμενος ῥυπαροῦς, μικρολόγους, μικροψύχους,<sup>1</sup> ἀδιαφόρους, κακογνώμονας,<sup>2</sup> βασκάνους, δειλοῦς, ἀνακεχωρηκότητας, κακολόγους, φιλερήμους, φιλοθρήνους, ἀναιδεῖς, δεισιδαίμονας, φιλομόχθους, ἀστόργους, ἐπιβουλευτικούς τῶν οἰκείων, ἀνευφράντους, μισοσωμάτους.

Τῷ δὲ τοῦ Διὸς κατὰ τὸν ἐκκείμενον τρόπον συνοικειωθεὶς ἐπὶ μὲν ἐνδόξων πάλιν διαθέσεων ποιεῖ ἀγαθοῦς, τιμητικούς τῶν πρεσβυτέρων, καθεστῶτας, καλογνώμονας, ἐπικούρους,<sup>3</sup> κριτικούς, φιλοκτήμονας, μεγαλοψύχους, μεταδοτικούς, εὐπροαιρέτους, φιλοικεῖους, πρᾶους, συνετοῦς, ἀνεκτικούς, ἐμφιλοσόφους· ἐπὶ δὲ τῶν ἐναντίων ἀπειροκάλους, μανιώδεις, ψοφοδεεῖς, δεισιδαίμονας, ἱεροφοιτῶντας,

<sup>1</sup> Bouché-Leclercq, p. 309, enumerates the conditions which should exist if a planet is to act effectively, classifying them as relations to the circles of the nativity, to the zodiac, to the other planets, and to the planet's own movement and the sun. With reference to the zodiac, the planet should be in a "solid" sign, in a quadrant and a sign of the same sex as itself, in one of its own proper domains (house, triangle, exaltation, terms, decans), and

### TETRABIBLOS III. 13

with reference to the universe and the angles,<sup>1</sup> he makes his subjects lovers of the body,<sup>2</sup> strong-minded, deep thinkers, austere, of a single purpose, laborious, dictatorial, ready to punish, lovers of property, avaricious, violent, amassing treasure, and jealous; but if his position is the opposite and without dignity, he makes them sordid, petty, mean-spirited, indifferent, mean-minded, malignant, cowardly, diffident, evil-speakers, solitary, tearful, shameless, superstitious, fond of toil, unfeeling, devisers of plots against their friends, gloomy, taking no care of the body.

Saturn, allied with Jupiter in the way described, again in dignified positions, makes his subjects good, respectful to elders, sedate, noble-minded, helpful,<sup>3</sup> critical, fond of possessions, magnanimous, generous, of good intentions, lovers of their friends, gentle, wise, patient, philosophical; but in the opposite positions, he makes them uncultured, mad, easily frightened, superstitious, frequenters of shrines,

not in its place of depression. With regard to the circle of the nativity, the planet should be upon an angle (especially mid-heaven) or in a favourable aspect (trine or sextile) to an angle, and not in a place which bears no aspect to the horoscope (is disjunct). This will explain what, in general, are "dignified" or "honourable" positions, and their opposites.

<sup>2</sup> Ptolemy's lists of characters and qualities attaching to the various planets, which occupy the rest of this chapter, are remarkably useful in reconstructing a picture of life in Egypt under the Roman Empire. F. Cumont, *L'Égypte des astrologues* (Brussels, 1937), makes constant use of them for this purpose.

<sup>3</sup> Certain MSS. add "without sharpness" here; see the critical note.

## PTOLEMY

ἔξαγορευτάς, ὑπόπτους, μισοτέκνους, ἀφίλους, ἐνδομύχους, ἀκρίτους, ἀπίστους, μωροκάκους,<sup>1</sup> ἰώδεις, ὑποκριτικούς, ἀδρανεῖς, ἀφιλοτίμους, μεταμελητικούς, αὐστηρούς, δυσεντεύκτους, δυσπροσίτους, εὐλαβητικούς,<sup>2</sup> εὐήθεις δ' ὁμοίως καὶ ἀνεξικάκους.

159 Τῷ δὲ τοῦ Ἄρεως συνοικειωθεῖς ἐπὶ μὲν ἐνδόξων διαθέσεων ποιεῖ ἀδιαφόρους, ἐπιπόνους, παρρησιαστικούς, ὀχληρούς, θρασυδείλους, αὐστηροπράξους, ἀνελεήμονας, καταφρονητικούς, τραχεῖς, πολεμικούς, ρίψοκινδύνους, φιλοθορύβους, δολίους, ἐνεδρευτάς, δυσμηνίτας, ἀδήκτους,<sup>3</sup> ὀχλοκόπους, τυραννικούς, πλεονέκτας, μισοπολίτας, φιλέριδας, μνησικάκους, βαθυπονήρους, δράστας, ἀνυποίστους, σοβαρούς, φορτικούς, καυχηματίας, κακωτάς, ἀδίκους, ἀκαταφρονήτους,<sup>4</sup> μισανθρώπους, ἀτρέπτους, ἀμεταθέτους, πολυπράγμονας, εὐαναστρόφους μέντοι καὶ πρακτικούς καὶ ἀκαταγωνίστους καὶ ὄλως ἐπιτευκτικούς. ἐπὶ δὲ τῶν ἐναντίων ἄρπαγας, ληστὰς, νοθευτάς, κακοπαθεῖς, αἰσχροκερδεῖς, ἀθέους,<sup>5</sup> ἀστόργους, ὕβριστάς, ἐπιβουλευτικούς, κλέπτας, ἐπιόρκους, μαιφόνους, ἀθεμιτοφάγους, κακουργούς, ἀνδροφόνους, φαρμακευτάς, ἱεροσύλους, ἀσεβεῖς, τυμβορούχους καὶ ὄλως<sup>6</sup> παγκάκους.

Allied with Venus in honourable positions Saturn makes his subjects haters of women, lovers of antiquity, solitary, unpleasant to meet, unambitious, hating the beautiful, envious, stern in social relations, not companionable, of fixed opinions, prophetic, given to the practice of religious rites, lovers of mysteries and initiations, performers of sacrificial rites, mystics, religious addicts, but dignified and reverent, modest, philosophical, faithful in marriage,<sup>1</sup> self-controlled, calculating, cautious, quick to take offence, and easily led by jealousy to be suspicious of their wives. In positions of the opposite kind he makes them loose, lascivious, doers of base acts, indiscriminating and unclean in sexual relations, impure, deceivers of women and particularly their own kin, unsound, censorious, depraved, hating the beautiful, fault-finders, evil-speakers, drunken, servile, adulterators, lawless in sexual relations, both active and passive, both natural and unnatural, and willing to seek them with those barred by age, station, or law, or with animals, impious, contemptuous of the gods, deriding mysteries and sacred rites, entirely faithless, slanderous, poisoners, rogues who will stop at nothing.

Saturn, in familiarity with Mercury, in honourable positions makes his subjects meddlers, inquisitive,

<sup>1</sup> At this point some of the MSS. and Camerarius add "steadfast".

inquirers into matters of law and custom, fond of the art of medicine, mystics, partakers in concealed and secret rites, miracle-workers, cheaters, living only for the day, facile, able to direct business, shrewd, bitter, accurate, sober, friendly, fond of practical affairs, capable of gaining their ends. In dishonourable positions he makes them frivolous talkers, malignant, with no pity in their souls, given to toil, hating their own kin, fond of torment, gloomy, night-prowlers, layers of ambushes, traitors, unsympathetic, thieves, magicians, poisoners, forgers, unscrupulous, unfortunate, and usually unsuccessful.

If Jupiter alone has the domination of the soul, in honourable positions he makes his subjects magnanimous, generous, god-fearing, honourable, pleasure-loving, kind, magnificent, liberal, just, high-minded, dignified, minding their own business, compassionate, fond of discussion, beneficent, affectionate, with qualities of leadership. If he chances to be in the opposite kind of position, he makes their souls seem similar, to be sure, but with a difference in the direction of greater humility, less conspicuousness, and poorer judgement.<sup>1</sup> For example, instead of magnanimity, he endows them with prodigality; instead

<sup>1</sup> Ptolemy probably has in mind Aristotle's famous doctrine that virtue is a mean (*Ethica Nicomachea*, 2, p. 1106b, 27) and the examples cited by Aristotle, but Ptolemy's instances are only similar to, not identical with, Aristotle's. Aristotle, for example, makes *ἐλευθεριότης*, "liberality," the virtue of which *ἀσωτία*, "prodigality" is an excess; contrasts *μεγαλοψυχία*, "magnanimity," with *χανότης*, "vanity," and *μικροψυχία*, "meanness of spirit"; *αἰδήμων*, "modest," with the excessive quality *κατάπληξ*, "shy," and with the deficiency *ἀναίσχυντος*, "shameless."

μονίαν, ἀντὶ δὲ αἰδοῦς δειλίαν, ἀντὶ δὲ σεμνότητος οἴησιν, ἀντὶ δὲ φιλανθρωπίας εὐήθειαν, ἀντὶ δὲ φιλοκαλίας φιληδονίαν, ἀντὶ δὲ μεγαλοφροσύνης βλακείαν, ἀντὶ δὲ ἐλευθεριότητος ἀδιαφορίαν, καὶ ὅσα τούτοις παραπλήσια.

Τῷ δὲ τοῦ Ἄρεως συνοικειωθεὶς ἐπὶ μὲν ἐνδόξων διαθέσεων ποιεῖ τραχεῖς, μαχίμους, στρατηγικούς,<sup>1</sup> διοικητικούς, κεκινημένους, ἀνυποτάκτους, θερμούς, παραβόλους, πρακτικούς, παρρησιαστικούς, ἐλεγκ-

of reverence for the gods, with superstition; instead of modesty, with cowardice; instead of dignity, with conceit; instead of kindness, with foolish simplicity; instead of the love of beauty, with love of pleasure; instead of high-mindedness, with stupidity; instead of liberality, with indifference, and the like.

Jupiter allied with Mars in honourable positions makes his subjects rough, pugnacious, military, managerial, restless, unruly, ardent, reckless, practical, outspoken, critical, effective, contentious, commanding, given to plotting, respectable, virile, fond of victory, but magnanimous, ambitious, passionate, judicious, successful. In the opposite position he makes them insolent, indiscriminating, savage, implacable, seditious, contentious, stubborn, slanderous, conceited, avaricious, rapacious, quickly changeable, light, readily changing their minds, unstable, headstrong, untrustworthy, of poor judgement, unfeeling, excitable, active, querulous, prodigal, gossipy, and in all ways uneven and easily excited.

Jupiter, allied with Venus, in honourable positions makes his subjects pure, pleasure-loving, lovers of the beautiful, of children, of spectacles, and of the domain of the Muses, singers, fond of those who reared them, of good character,<sup>1</sup> beneficent, com-

<sup>1</sup> *εὐήθεια* and the corresponding adjective, *εὐήθης*, have two distinct senses, the original, etymological one, "good character," and a derived meaning, "simplicity" or "guilelessness," which may amount to nothing more than downright folly. Plato, in *Republic*, 400 DE, uses *εὐήθεια* in the first sense, specifically saying that he does not mean the other kind of *εὐήθεια*. In the present passage, the context clearly shows that the first sense is intended; but in the very next paragraph *εὐήθης* occurs in its second meaning.

PTOLEMY

into nature, speculative, gifted, emulous, beneficent, prudent, good at conjecture, mathematicians, partakers in mysteries, successful in attaining their ends. In the opposite position he makes them utter rascals, precipitate, forgetful, impetuous, light-minded, fickle, prone to change their minds, foolish rogues, witless, sinful, liars, indiscriminating, unstable, undependable, avaricious, unjust, and, in general, unsteady in judgement and inclined to evil deeds.

While the foregoing is true as stated, nevertheless the condition of the moon itself also makes a certain contribution. For when the moon happens to be at the bendings of its northern and southern limits,<sup>1</sup> it helps,<sup>2</sup> with respect to the character of the soul, in the direction of greater versatility, resourcefulness, and capacity for change; at the nodes, in the direction of greater keenness, activity, and excitability; again, at rising and in the increases of its illumination, towards greater natural endowments, renown, firmness, and frankness; and in the waning of its illumination, or its occultations, towards greater sluggishness and dullness, less fixity of purpose, greater cautiousness, and less renown.

The sun also aids, when it is familiar with the planet that governs the temperament of the soul, in an honourable position modifying it in the

<sup>1</sup> See the note on iii. 12 (p. 325) concerning the bendings and nodes of the moon's orbit.

<sup>2</sup> Here, as in the case of bodily form and temperament (iii. 11; cf. especially p. 313), the actual rulers are the five planets, and it is the rôle of the luminaries to assist, adding their influences to those of the former.

direction of justice, success, honour, dignity, and reverence for the gods, but in the contrary and alien position making it humbler, more industrious, less conspicuous, more savage, more obstinate, harsher, with a harder life, and in general less successful.

#### 14. *Of Diseases of the Soul.*

Since the account of the principal diseases of the soul, in a sense, follows upon that of the soul's characteristics, it is in general needful to note and observe the positions of Mercury and the moon relative to each other, to the angles, and to the planets whose nature it is to do injury; for if, while they themselves are unrelated to each other, or to the eastern horizon, they are overcome, or surrounded, or held in opposition by unfamiliar stars in injurious aspect, they cause the incidence of various diseases which affect the soul's character. Their interpretation again is to be calculated from the previously described qualities of the planets which are familiar to the places<sup>1</sup> in the sky.

Indeed, most of the more moderate diseases have, in a way, already been distinguished in what has been said about the character of the soul, and their increase can be discerned from the excess of injurious influences; for one might now with propriety call

<sup>1</sup> *I.e.* of the moon and Mercury.

### TETRABIBLOS III. 14

“diseases” those extremes of character which either fall short of or exceed the mean. Those affections, however, which are utterly disproportionate and as it were pathological, which relate to the whole nature, and which concern both the intelligent part of the soul and its passive part, are, in brief, to be discerned as follows.

In most cases those are epileptic<sup>1</sup> in whose genitures the moon and Mercury are, as we said above, unrelated to each other or to the eastern horizon, while Saturn by day or Mars by night is angular and in the aspect previously described.<sup>2</sup> They are violently insane when, again under the same conditions, Saturn by night and Mars by day rules the position, particularly in Cancer, Virgo, or Pisces. They are afflicted by demons<sup>3</sup> and have water on the brain when the maleficent planets are in this position and control the moon in phase, Saturn when she is at conjunction, Mars when she is full, and particularly in Sagittarius and Pisces. When the maleficent planets are by themselves and rule the configuration in the manner stated, the diseases of the rational part of the soul which we have mentioned as being

<sup>1</sup> Epilepsy and insanity were also mentioned among the bodily diseases (c. 12 above, pp. 329, 331).

<sup>2</sup> Overcoming, surrounding, or opposing; see above.

<sup>3</sup> On this superstition in Roman Egypt, cf. Cumont, *L'Égypte des astrologues*, 167-170. Ptolemy apparently identifies seizure by demons with “water on the brain.”

τὰ προκείμενα<sup>1</sup> τοῦ διανοητικοῦ τῆς ψυχῆς νοσήματα. συνοικειωθέντων δὲ τῶν ἀγαθοποιῶν Διὸς τε καὶ Ἀφροδίτης ἐπὶ μὲν τῶν λιβυκῶν μερῶν ὄντες αὐτοί, τῶν ἀγαθοποιῶν ἐν τοῖς ἀπηλιωτικοῖς<sup>2</sup> κεκεντρωμένων, ἰάσιμα μὲν, εὐπαραδειγματίστα<sup>3</sup> δὲ ποιούσι τὰ πάθη· ἐπὶ μὲν τοῦ τοῦ Διὸς διὰ θεραπειῶν ἰατρικῶν καὶ ἤτοι διαιτητικῆς<sup>4</sup> ἀγωγῆς ἢ φαρμακείας, ἐπὶ δὲ τοῦ τῆς Ἀφροδίτης διὰ χρησμῶν καὶ τῆς ἀπὸ θεῶν ἐπικουρίας. ἐπὶ δὲ τῶν ἀπηλιωτικῶν αὐτοὶ κεκεντρωμένοι, τῶν ἀγαθοποιῶν δυνόντων, ἀνιάτα τε ἄμα καὶ πολυθρύλλητα καὶ ἐπιφανέστατα ποιούσι τὰ νοσήματα, κατὰ μὲν τὰς ἐπιληψίας συνεχείαις καὶ περιβοησίαις καὶ κινδύνοις θανατικοῖς τοὺς πάσχοντας περικυλίοντες· κατὰ δὲ τὰς μανίας καὶ ἐκστάσεις ἀκαταστασίαις<sup>5</sup> καὶ ἀπαλλοτριώσεσι τῶν οἰκείων καὶ γυμνητείας καὶ βλασφημίας καὶ τοῖς τοιούτοις· κατὰ δὲ τὰς δαιμονιοπληξίας ἢ τὰς τῶν ὑγρῶν ὀχλήσεις, ἐνθουσιασμοῖς καὶ ἐξαγορίαις καὶ αἰκίαις καὶ τοῖς ὁμοίοις τῶν παραδειγματισμῶν. ἰδίως δὲ καὶ τῶν τὸ σχῆμα περιεχόντων τόπων οἱ μὲν ἡλίου καὶ οἱ τοῦ Ἄρεως πρὸς τὰς μανίας μάλιστα συνεργούσιν, οἱ δὲ Διὸς καὶ Ἑρμοῦ πρὸς τὰς ἐπιληψίας, οἱ δὲ τῆς Ἀφροδίτης πρὸς τὰς θεοφορίας καὶ ἐξαγορίας, οἱ δὲ τοῦ Κρόνου καὶ σελήνης πρὸς τὰς τῶν ὑγρῶν ὀχλήσεις καὶ πρὸς τὰς δαιμονιοπληξίας.

<sup>2</sup> ἀπηλιωτικοῖς (ἀφελ-, ἀπιλ-) VPLMADEProc., ἀγαθοποιοῖς NCam.<sup>1</sup>, ἀνατολικοῖς Cam.<sup>2</sup>

caused by them are, to be sure, incurable, but latent and obscure. But if the beneficent planets Jupiter and Venus have some familiarity to them when they are themselves in the western parts and the beneficent planets are angular<sup>1</sup> in the east, they make the diseases curable, but noticeable; if it be Jupiter, curable by medical treatments, a diet, or drugs; if Venus, by oracles and the aid of the gods. When the maleficent planets themselves are angular in the east and the beneficent planets are setting, the diseases which they cause are both incurable, the subject of talk, and conspicuous; in epilepsy they involve the victims in continuous attacks, notoriety, and deadly peril; in madness and seizures, they cause instability, alienation of friends, tearing off clothes, abusive language, and the like; in demonic seizures, or water on the brain, possession, confession, torments, and similar manifestations. In detail, of the places that possess the configuration, those of the sun and Mars aid in causing madness, those of Jupiter and Mercury, epilepsy; those of Venus, divine possession and public confession; and those of Saturn and the moon, gatherings of water and demonic seizures.

### TETRABIBLOS III. 14

The morbid perversion of the active part of the soul in its general nature, therefore, is produced in some such forms as these and is produced by these configurations of the planets. The corresponding perversion of the passive portion, as in the former instance viewed in its extreme cases, is most apparent in excesses and deficiencies in matters of sex, male and female, as compared with what is natural, and in inquiry is apprehended in the same fashion as before, though the sun is taken, together with the moon, instead of Mercury, and the relation to them of Mars, together with Venus, is observed. For when these thus fall under observation, if the luminaries are unattended in masculine signs, males exceed in the natural, and females exceed in the unnatural quality, so as merely to increase the virility and activity of the soul. But if likewise Mars or Venus as well, either one or both of them, is made masculine,<sup>1</sup> the males become addicted to natural sexual intercourse, and are adulterous, insatiate, and ready on every occasion for base and lawless acts of sexual passion, while the females are lustful for unnatural congresses, cast inviting glances of the eye, and are what we call *tribades*; <sup>2</sup> for they deal with females and perform the functions of males. If Venus alone is constituted in a masculine manner, they do these things secretly and not openly. But if Mars likewise is so constituted, without

reserve, so that sometimes they even designate the women with whom they are on such terms as their lawful "wives."

But on the other hand, when the luminaries in the aforesaid configuration are unattended in feminine signs, the females exceed in the natural, and the males in unnatural practice, with the result that their souls become soft and effeminate. If Venus too is made feminine, the women become depraved, adulterous, and lustful, with the result that they may be dealt with in the natural manner on any occasion and by any one soever, and so that they refuse absolutely no sexual act, though it be base or unlawful. The men, on the contrary, become effeminate and unsound with respect to unnatural congresses and the functions of women, and are dealt with as pathies, though privately and secretly. But if Mars also is constituted in a feminine manner, their shamelessness is outright and frank and they perform the aforesaid acts of either kind, assuming the guise of common bawds who submit to general abuse and to every baseness until they are stamped with the reproach and insult that attend such usages. And the rising and morning positions of both Mars and Venus have a contributory effect, to make them more virile and notorious, while setting and evening positions increase femininity and sedateness. Similarly, if Saturn is present, his influence joins with each of the foregoing to produce more licentiousness,

## TETRABIBLOS III. 14—IV. 1-2

impurity, and disgrace, while Jupiter aids in the direction of greater decorum, restraint, and modesty, and Mercury tends to increase notoriety, instability of the emotions, versatility, and foresight.

### BOOK IV.

#### [1. *Introduction.*]

THE foregoing may be taken as what can be learned by investigation of matters antecedent to the nativity and contemporary with it, together with such of those posterior to the nativity as properly apply to the constitution of the subject by disclosing the general quality of his temperament. Among external accidentals, which should be treated next in order, the discussion of the fortune of both riches and honour comes first; and as material fortune is associated with the properties of the body, so honour belongs to those of the soul.

#### 2. *Of Material Fortune.*

What the subject's material acquisitions will be is to be gained from the so-called "Lot of Fortune";<sup>1</sup> that one alone, however, to discover which we measure from the horoscope the distance from the sun to the moon, in both diurnal and nocturnal nativities, for the reasons which we stated in the

<sup>1</sup> See iii. 10, pp. 275-77. The authenticity of the following clause (to "nativities") is doubtful, since it appears to refer to the sentence in iii. 10 (p. 277, n. 1) which is clearly an interpolation.

χρόνων ζωῆς αἰτίας. σκοπεῖν οὖν δεήσει τούτου<sup>1</sup>

## TETRABIBLOS IV. 2

discussion of the length of life. As it is constituted in this way, we shall be obliged therefore to take the lordship of the sign, and observe what is the condition of these planets with regard to power and familiarity, in the way which we specified at the beginning.<sup>1</sup> Further, we must consider the planets in aspect with them, or those of their own or of the opposite sect that overcome them. For when the planets which govern the Lot of Fortune are in power, they make the subjects rich, particularly when they chance to have the proper testimony<sup>2</sup> of the luminaries; thus Saturn brings riches through building, or agriculture, or shipping ventures, Jupiter through fiduciary relationships, guardianships, or priesthoods, Mars through military operations and command, Venus through gifts from friends or women, and Mercury through eloquence and trade. And in a special way, when Saturn is associated with material fortune, if he is in aspect with Jupiter, he is the cause of inheritances, particularly when this comes about upon the upper angles and Jupiter is in a bicorporeal sign or holds the application of the moon. For in that case they are adopted and inherit the possessions of others; and if the planets of the same sect as the ruling planets happen themselves to witness to the rulership, they retain their possessions without loss; but if the planets of the opposite sect overcome the governing places or rise after them, they bring

about loss of possessions, and the general time<sup>1</sup> is discovered by means of the approach of the causative planets to the angles and the succedent signs.

### 3. *Of the Fortune of Dignity.*

It will be needful to determine the questions of dignity and happiness resulting therefrom from the position of the luminaries and the familiarity to them of their attendant planets.<sup>2</sup> For if both the luminaries are in masculine signs and either both of them, or even one of the two, angular, and particularly if the luminary of the sect<sup>3</sup> is also attended by the five planets, matutine to the sun and vespertine to the moon, the children will be kings. And if the attendant planets are either themselves angular or bear an aspect to the superior angle, the children born will continue to be great, powerful, and world-rulers,<sup>4</sup> and they will be even more fortunate if the

<sup>1</sup> When the inheritanee falls due; Bouché-Leclercq, p. 437. Ashmand, p. 173, would have the expression refer to the duration of the wealth.

<sup>2</sup> "Attendance" is described by Porphyry, *Introduction*, pp. 190-191, ed. Wolf, whom Hephæstion i. 17, pp. 74-75, ed. Engelbrecht, follows. The second of the three varieties of attendance mentioned applies to the luminaries. If one of these is at the horoscope or mid-heaven, whether or not it is in its own house, it will have as attendant any planet of its own sect which projects its ray upon the luminary, those of the sun's (diurnal) sect in the direction of the diurnal movement of the heavens, those of the moon's sect in the other direction.

<sup>3</sup> The sect of the geniture, diurnal or nocturnal.

<sup>4</sup> Ptolemy doubtless meant Roman emperors, but the epithet was used of kings by the astrologers before it appeared in the inscriptions of the emperors (Cumont, *L'Égypte des astrologues*, p. 27).

φοροῦντες ἀστέρες δεξιοὶ τοῖς ὑπὲρ γῆν κέντροις συσχηματίζονται. εἰάν δὲ τῶν ἄλλων οὕτως ἐχόντων μόνος ὁ ἥλιος ἢ ἐν ἀρρενικῶ, ἢ δὲ σελήνη ἐν θηλυκῶ, ἐπίκεντρον δὲ τὸ ἕτερον τῶν φωτῶν, ἡγε-  
 176 μόνες μόνον ἔσονται ζωῆς καὶ θανάτου κύριοι. εἰάν δὲ πρὸς τούτοις μηδὲ οἱ δορυφοροῦντες ἀστέρες ἐπίκεντροι ὧσιν ἢ μαρτυρήσωσι τοῖς κέντροις, μεγάλοι μόνον ἔσονται καὶ ἐν ἀξιώμασι τοῖς ἀπὸ μέρους στεμματηφορικοῖς ἢ ἐπιτροπικοῖς ἢ στρατοπεδαρχικοῖς καὶ οὐχὶ τοῖς ἡγεμονικοῖς. εἰάν δὲ τὰ φῶτα μὴ ἢ ἐπίκεντρα, τῶν δὲ δορυφορούντων ἀστέρων οἱ πλείστοι ἢτοι ἐπίκεντροι ὧσιν ἢ συσχηματίζονται τοῖς κέντροις, ἐν ἀξιώμασι μὲν ἐπιφανεστέροις οὐ γενήσονται, ἐν προαγωγαῖς δὲ πολιτικαῖς καὶ μετριότητι περὶ τὰς κατὰ τὸν βίον προλήψεις· μηδὲ τῶν δορυφορούντων μέντοι τοῖς κέντροις συνοικειωθέντων ἀνεπίφαντοι ταῖς πράξεις καὶ ἀπρόκοποι καθίστανται· τέλειον δὲ ταπεινοὶ καὶ κακοδαίμονες γίνονται ταῖς τύχαις ὅταν μηδέτερον τῶν φωτῶν μήτε κεκεντρωμένον ἢ μήτ' ἐν ἀρρενικῶ ζυδίῳ τυγχάνη μήτε δορυφορῆται ὑπὸ τῶν ἀγαθοποιῶν. ὁ μὲν οὖν καθ' ὅλου τύπος τῆς προκειμένης ἐπισκέψεως τοιαύτην τινὰ τὴν αὐξομείωσιν ἔχει τῶν ἀξιωματῶν· τὰς δὲ μεταξὺ τούτων καταστάσεις

<sup>1</sup> Dexter, or on the right, is in the direction of the diurnal movement of the heavens.

<sup>2</sup> Certainly officers of very high rank in the imperial service are meant. Cumont, *op. cit.*, pp. 39-40, shows that ἡγεμών (Lat. *dux*) was commonly so understood in Egypt, and sometimes it is equivalent to *iudex*, "judge" (pp. 45-46).

## TETRABIBLOS IV. 3

attendant planets are in dexter aspect<sup>1</sup> to the superior angles. But if, while the others are in this position, the sun alone is in a masculine sign, and the moon is in a feminine one, and one of the luminaries is angular, they will merely be generals,<sup>2</sup> with power of life and death. If, however, besides this the attendant planets are neither angular nor witnessing<sup>3</sup> to the angles, they will be merely great and will enjoy partial dignities, those which involve the wearing of chaplets,<sup>4</sup> or those of superintendence<sup>5</sup> or of military command,<sup>6</sup> and not those of first rank. But if the luminaries are not angular, and most of the attendant planets are either angular or in aspect with the angles, they will not attain the more conspicuous honours but rather civil leadership and moderate advancement in their careers. If, however, the attendant planets are not associated with the angles, they are rendered obscure in their actions and without preferment, and they are entirely humble and miserable in their fortunes when neither of the luminaries is angular, or in a masculine sign, or attended by the beneficent planets. The general outline, then, of the investigation before us involves a gradation of dignities of this sort. Since there are very many

<sup>1</sup> In aspect.

<sup>2</sup> Connected with priestly dignities ; *cf.* Cumont, *op. cit.*, p. 117.

<sup>3</sup> Probably referring to prominent positions at court or in the civil service.

<sup>4</sup> The word *στρατοπεδάρχης* primarily means "commander of a camp," as, in Latin, *praefectus castrorum*, but came to be used generally to mean "commander of troops" ; *cf.* Cumont, *op. cit.*, pp. 40-41.

παμπληθείς οὔσας καταστοχαστέον ἀπὸ τῶν περὶ αὐτὸ τὸ εἶδος τῶν τε φωτῶν καὶ τῆς δορυφορίας αὐτῶν ἐπὶ μέρους ἐναλλοιώσεως καὶ τῆς κυρίας τῶν δορυφορήσεων· ταύτης γὰρ περὶ μὲν τοὺς τὴν 177 αἴρεσιν ἔχοντας ἢ τοὺς ἀγαθοποιούς συνισταμένης τὸ ἀβθεντικώτερον καὶ ἀπταιστότερον τοῖς ἀξιώμασι παρακολουθεῖ· περὶ δὲ τοὺς ἐναντίους ἢ τοὺς κακοποιούς, τὸ ὑποτεταγμένον καὶ ἐπισηφαλέστερον. καὶ τὸ τῆς ἀξίας δὲ τῆς ἐσομένης εἶδος ἀπὸ τῆς τῶν δορυφορησάντων ἀστέρων ἰδιοτροπίας θεωρητέον· ἐπειδήπερ ὁ μὲν τοῦ Κρόνου τὴν κυρίαν τῆς δορυφορίας ἔχων ἐπὶ πολυκτημοσύνη καὶ συναγωγῇ χρημάτων τὰς δυναστείας ποιεῖ, ὁ δὲ τοῦ Διὸς ἢ ὁ τῆς Ἀφροδίτης ἐπὶ χάρισι καὶ δωρεαῖς καὶ τιμαῖς καὶ μεγαλοψυχίαις· ὁ δὲ τοῦ Ἄρεως ἐπὶ στρατηλασίαις καὶ νίκαις καὶ φόβοις τῶν ὑποτεταγμένων· ὁ δὲ τοῦ Ἑρμοῦ διὰ σύνεσιν ἢ παιδείαν καὶ ἐπιμέλειαν καὶ οἰκονομίαν τῶν πραγμάτων.

## TETRABIBLOS IV. 3-4

conditions intermediate between these grades, one must estimate them from the specific qualities of the luminaries themselves, and the particular variations in the manner in which they are attended, and the government of the attendance. For if their attendance consists of planets of the same sect, or of the beneficent planets, greater independence and security will attend the dignities; but if it involves the opposite sect, or the maleficent planets, there will be dependency and less security. The kind of future honour is to be divined from the quality of the attending planets; for if Saturn governs the attendance, he brings about power based on wealth and the amassing of riches, but Jupiter or Venus that which rests upon favours, gifts, honours, and magnanimity; Mars brings power founded on generalships, victories, and the fears of subordinates, and Mercury that which depends upon intelligence, education, and the care and management of affairs.

### *4. Of the Quality of Action.*

The lord of action is apprehended by two methods, from the sun and from the culminating sign. For it will be needful to look both for the planet that has made its morning appearance closest to the sun, and that which is at mid-heaven, particularly when it occupies the application of the moon; and if the same star occupies both the aforesaid positions, this alone must be employed, and similarly if none

προσχηστέον· ὁμοίως δὲ κἂν τὸ ἕτερον μηδεὶς ἔχη, τῷ τὸ ἕτερον εἰληφότι μόνῳ. ἔαν δὲ ἕτερος ἦ ὁ τὴν<sup>1</sup> ἔγγιστα φάσιν πεποιημένος καὶ ἕτερος ὁ τῷ μεσουρανήματι καὶ τῇ σελήνῃ συνοικειούμενος, 178 ἀμφοτέροις προσχηστέον,<sup>2</sup> τὰ πρωτεῖα διδόντας τῷ κατὰ ἐπικράτησιν πλείους ἔχοντι ψήφους οἰκοδεσποτίας καθ' ὃν προεκτεθείμεθα τρόπον. ἔαν δὲ μηδεὶς εὐρίσκηται μήτε φάσιν<sup>3</sup> πεποιημένος μήτε ἐπὶ τοῦ μεσουρανήματος, τὸν κύριον αὐτοῦ παραληπτέον, πρὸς ἐπιτηδεύσεις μέντοι τὰς κατὰ καιροῦς· ἄπρακτοι γὰρ ὡς ἐπὶ πᾶν οἱ τοιοῦτοι γίνονται.

Ὁ μὲν οὖν τῆς πράξεως τὴν οἰκοδεσποτίαν λαβὼν ἀστὴρ οὕτως ἡμῖν διακριθήσεται· τὸ δὲ ποιὸν τῶν πράξεων ἔκ τε τῆς ἰδιοτροπίας τῶν τριῶν ἀστέρων Ἄρεως καὶ Ἀφροδίτης καὶ Ἑρμοῦ καὶ ἐκ τῆς τῶν ζωδίων ἐν οἷς ἂν τύχῃσι παραπορευόμενοι. ὁ μὲν γὰρ τοῦ Ἑρμοῦ τὸ πράττειν παρέχων, ὡς ἂν τις εἴποι τυπωδῶς, ποιεῖ γραμματέας, πραγματευτικούς,<sup>4</sup> λογιστάς, διδασκάλους, ἐμπόρους, τραπεζίτας, μάντις, ἀστρολόγους, θύτας καὶ ὄλως τοὺς ἀπὸ γραμμάτων καὶ ἐρμηνείας καὶ δόσεως καὶ λήψεως ἐργαζομένους· κἂν μὲν ὁ τοῦ Κρόνου αὐτῷ μαρτυρήσῃ, ἀλλοτρίων οἰκονόμους ἢ ὄνειροκρίτας ἢ ἐν ἱεροῖς τὰς ἀναστροφὰς<sup>5</sup> ποιουμένους προφάσει μαντειῶν καὶ ἐνθουσιασμῶν· ἔαν δὲ ὁ τοῦ Διός,

## TETRABIBLOS IV. 4

occupies one of these places, we must use only the one which occupies the other of the places. And if one planet has made the nearest morning appearance and another is associated with the mid-heaven, and with the moon, we must employ them both, giving preference to the one which by reason of its strength has the greater number of claims to domination according to the scheme which we have already set forth.<sup>1</sup> But if not one is found which either has made an appearance<sup>2</sup> or is at mid-heaven, we must take the lord of the latter region, with reference however to the occasional pursuits of the subject, for persons with such genitures are for the most part inactive.

Thus, then, we shall determine the planet that governs action. The quality of the action, however, is to be discerned from the character of the three planets, Mars, Venus, and Mercury, and from that of the signs through which they happen to be passing. For if Mercury governs action, to speak generally, he makes his subjects scribes, men of business, calculators, teachers, merchants, bankers, sooth-sayers, astrologers, sacrificers, and in general those who perform their functions by means of documents, interpretation, and giving and taking. And if Saturn testifies to him, they will be managers of the property of others, interpreters of dreams, or frequenters of temples for the purpose of prophecies and inspiration. If it is Jupiter that witnesses, they will be law-makers,

<sup>1</sup> In iii. 2 (p. 233).

<sup>2</sup> Certain MSS. say "a morning appearance."

orators, sophists, who enjoy familiarity with great persons.

If Venus rules action, she makes her subjects persons whose activities lie among the perfumes of flowers or of unguents, in wine, colours, dyes, spices, or adornments, as, for example, sellers of unguents, weavers of chaplets, innkeepers, wine-merchants, druggists, weavers, dealers in spices, painters, dyers, sellers of clothing. And if Saturn testifies to her, she makes them dealers in goods used for pleasure or adornment, sorcerers, poisoners, panders, and those who make their living from similar occupations. If Jupiter testifies, they will be athletes, wearers of the wreath, persons deemed worthy of honours, and men who derive advancement from women.

Mars, in aspect with the sun, makes his subjects those who use fire in their crafts, such as cooks, moulders, cauterizers, smiths, workers in mines; if he is not with the sun, those who work with iron, such as shipbuilders, carpenters, farmers, quarrymen, stone-dressers, jewellers, splitters of wood, and their subordinate workers. If Saturn testifies to him, he produces seamen, drawers of water, tunnelers, painters, gamekeepers,<sup>1</sup> cooks, embalmers.<sup>2</sup> If Jupiter testifies, he produces soldiers,

<sup>1</sup> The Egyptian kings and Roman emperors kept exotic animals and had servants to look after them; *cf.* Cumont, *op. cit.*, pp. 63-64.

<sup>2</sup> More accurately, those who opened the corpses for the purpose of embalming them; *cf.* Cumont, *op. cit.*, pp. 138 ff.

servants, publicans, innkeepers, ferrymen, assistants at sacrifice.

Again, when two planets are found to rule action, if Mercury and Venus take the rulership, they bring about action expressed by the arts of the Muses, musical instruments, melodies, or poems, and rhythm, particularly when they have exchanged places. For they produce workers in the theatre, actors, dealers in slaves, makers of musical instruments, members of the chorus, makers of strings, painters, dancers, weavers, and wax-moulders. And again, if Saturn testifies to them, he produces those in the aforesaid callings, as well as dealers in feminine finery. If Jupiter testifies, he produces lawyers, supervisors of counting houses,<sup>1</sup> public officers, teachers of children, leaders of the populace.<sup>2</sup>

If Mercury and Mars together assume the lordship of action, they produce sculptors, armourers, makers of sacred monuments, modellers, wrestlers, physicians, surgeons, accusers, adulterers, evil-doers, forgers. If Saturn testifies to them, they produce murderers, sneak-thieves, burglars, pirates, cattle-thieves, villains. If Jupiter testifies, they produce men-at-arms, duellists, energetic, clever persons,

<sup>1</sup> Probably the public fiscal offices are meant; Cumont, p. 47, n. 1.

## TETRABIBLOS IV. 4

busybodies, who meddle in others' affairs and thereby gain their living.

But if Venus and Mars together dominate action, they produce dyers, perfumers, workers in tin, lead, gold, and silver, farmers, dancers in armour, druggists, physicians who employ drugs in their treatments. If Saturn testifies to them, they produce attendants of sacred animals, those who bury men, mourners, pipers at funerals, fanatics, who resort to wherever there are mysteries, laments, and bloody rites. But if Jupiter testifies, frequenters of temples, interpreters of omens, bearers of the sacred instruments, supervisors of women, interpreters of marriages<sup>1</sup> and matches, making their living by such occupations, and at the same time devoted to pleasure, and reckless.

Likewise the specific natures of the signs in which are the rulers of action contribute to the variety of the action. For anthropomorphic signs<sup>2</sup> are of some assistance to all scientific pursuits or those useful to man; the quadrupedal<sup>3</sup> assist in those that concern mines, commerce, building, and carpentry; the solstitial and equinoctial,<sup>4</sup> those that are interpretative, involve barter, or concern measuring,

<sup>1</sup> Perhaps, "matrimonial agents"; cf. Cumont, p. 177, n. 3.

<sup>2</sup> Gemini, Virgo, Sagittarius (partly), Libra. This and the following notes depend upon Hephaestion's characterisations.

<sup>3</sup> Leo, Sagittarius.

<sup>4</sup> Cancer, Capricorn, Aries, Libra.

καὶ ἱερατικὰς · τὰ δὲ χερσαῖα καὶ τὰ κάθυγρα πρὸς τὰς ἐν ὑγροῖς ἢ δι' ὑγρῶν καὶ τὰς βοτανικὰς καὶ ναυπηγικὰς · ἔτι τε περὶ ταφὰς ἢ ταριχείας ἢ ἀλείας.

Ἰδίως δὲ πάλιν ἡ σελήνη ἐὰν τὸν πρακτικὸν τόπον<sup>1</sup> ἐπισχῆ, τὸν ἀπὸ συνόδου δρόμον ποιουμένη σὺν τῷ τοῦ Ἑρμοῦ, ἐν μὲν Ταύρῳ καὶ Αἰγόκερῳ καὶ Καρκίνῳ ποιεῖ μάντεις, θύτας, λεκανομάντεις · ἐν δὲ Τοξότη καὶ Ἰχθύσι νεκρομάντεις καὶ δαιμόνων κινητικούς · ἐν δὲ Παρθένῳ καὶ Σκορπίῳ<sup>182</sup> μάγους, ἀστρολόγους, ἀποφθεγγομένους, προγνώσεις ἔχοντας · ἐν δὲ Ζυγῷ καὶ Κριῷ καὶ Λέοντι θεολήπτους, ὄνειροκρίτας, ἐξορκιστάς.<sup>2</sup>

## TETRABIBLOS IV. 4

agriculture, and religion; the terrestrial<sup>1</sup> and aquatic,<sup>2</sup> activities in or with liquids, or those that are botanical, or concern shipbuilding, and furthermore burial, or pickling, or salting.<sup>3</sup>

In a special way, again, if the moon holds the place of action, and is moving away from conjunction, together with Mercury, in Taurus, Capricornus, and Cancer, she produces soothsayers, makers of sacrifices, and adepts in lekanomancy;<sup>4</sup> in Sagittarius and Pisces necromancers and those who can arouse daemons; in Virgo and Scorpio magicians, astrologers, prophets, those who have second sight; in Libra, Aries, and Leo persons inspired by the gods, interpreters of dreams, and exorcists.

So, then, the particular species of action will have to be conjectured by such means, through combinations; its amplitude must be discovered from the power of the dominating planets. For when they are rising or angular the actions which they cause are independent, but if they are setting or declining from the angles, subordinate; when beneficent planets overcome them, great, glorious, profitable, unerring, and gracious; but if maleficent planets overcome them, mean, inglorious, profitless, and fallible. With Saturn in opposition, they bring

<sup>1</sup> Aries, Taurus, Scorpio, Sagittarius.

<sup>2</sup> Pisces; Cancer and Capricorn are amphibious.

<sup>3</sup> Preserved fish were an important article of commerce in Egypt; Cumont, p. 112. *ταριχευτής* (cf. *ταριχείας* in the text) means also one who embalms corpses; Cumont, p. 139.

<sup>4</sup> Divination by the inspection of liquids in vessels.

cold and mixtures of colours ;<sup>1</sup> with Mars, temerity and notoriety ; with both together, utter ruin of action. In general the period of increase or diminution, again, is calculated by means of the position, from time to time, of the planets responsible for the effect relative to the eastern and western angles.<sup>2</sup>

### 5. *Of Marriage.*

As the subject of marriage comes next in order to these matters, the following is the method whereby the lawful association of man and wife must be investigated. For men it is necessary to observe the position of the moon in their genitures.<sup>3</sup> For, in the first place, if she chances to be in the eastern quadrants, she makes men marry young or marry women younger than themselves ; but if she is in the western quadrants they marry late or marry older women. And if she is under the rays of the sun<sup>4</sup> and in aspect with Saturn, they do not marry at all. Then again, if the moon is in a sign of a single

<sup>1</sup>The anonymous commentator (p. 152, ed. Wolf) explains: *τουτέστιν ἀσχημοσύνας*, "that is, deformities." Proclus paraphrases, "Saturn brings opposition in cold and in the mixtures of colours."

<sup>2</sup>*Cf.* the directions for computation of the time involved which were given at the end of iv. 2 (p. 377).

<sup>3</sup>The text has, literally, "their moon," but this, of course, means the moon as found in the genitures of the subjects. *Cf.* P. Mich. 149, vi. 31-32, *τούτων Ἀφροδίτη εὔρεθήσεται κτλ.*, "Venus in the genitures of these men will be found," etc.

<sup>4</sup>Within 15° of the sun ; *cf.* Bouché-Leclercq, p. 309.

---

<sup>1</sup>The "bicorporeal" signs (δίσωμα) precede the solstitial and equinoctial signs and follow the "solid" signs; see i. 11. Ptolemy explains the name on the ground that they

## TETRABIBLOS IV. 5

figure, or is applying to one of the planets,<sup>1</sup> she makes them men of one marriage; but if she is in a bicorporeal or multiform sign, or applies to several planets in the same sign, she makes them marry more than once. And if the planets to which she applies, either by propinquity, or by testimony,<sup>2</sup> are beneficent, the men get good wives; but if they are maleficent planets, the opposite. If she applies to Saturn, he makes the wives hardworking and stern; Jupiter, dignified and good managers; Mars, bold and unruly; Venus, cheerful, beautiful, and charming; Mercury, intelligent and keen. Further, Venus with Jupiter, Saturn, or Mercury makes them thrifty and affectionate to their husbands and children, but with Mars, easily roused to wrath, unstable, and unfeeling.

In the case of the wives one must observe the sun in their genitures; for if he, again, chances to be in the eastern quadrants, he makes those who have him in this position in their genitures either marry young or marry men younger than themselves, but in the western quadrants, he makes them marry late or marry husbands older than themselves. And if the sun is in a sign of a single figure, or applies to one of

share in two kinds of weather, rather than that the constellations represent more than one figure (*e.g.* Gemini, Pisces), or a figure of a mixed nature (*διφυσῆς*; *e.g.* Sagittarius, Capricorn); it is characteristic of him to prefer scientific explanations to those based on mythology or fancy. The anonymous commentator says that he means by "signs of a single figure" the tropical and solid signs, with the exception of the fecund (*πολύσπερμα*), which are akin to the bicorporeal. For "application," *cf.* i. 24.

<sup>2</sup> Synonymous with "aspect."

<sup>1</sup>The anonymous commentator (p. 154, ed. Wolf) says, on this passage: "And if (sc. the aspects) are harmonious,

the oriental planets, he makes them marry but once ; but, again, if he is in a bicorporeal or multiform sign, or in aspect with several planets in the east, they marry more than once. If Saturn is similarly in aspect with the sun, they marry sedate, useful, industrious husbands ; if Jupiter is in aspect, dignified and magnanimous ; Mars, men of action, lacking in affection, and unruly ; Venus, neat and handsome ; Mercury, thrifty and practical ; Venus with Saturn, sluggish and rather weak in sexual relations ; Venus with Mars, ardent, impetuous, and adulterous ; Venus with Mercury, infatuated with boys. In this connection we mean by eastern quadrants, in the case of the sun, the signs which precede the rising sign of the zodiac, and those which precede the setting sign ; with reference to the moon, the signs from new and full moon to the quarters ; and by western quadrants the signs opposite these.

Marriages for the most part are lasting when in both the genitures the luminaries happen to be in harmonious aspect, that is, in trine or in sextile with one another, and particularly when this comes about by exchange ;<sup>1</sup> and even more when the

either both the luminaries (*sc.* are in aspect), or in both the genitures, or one with the other ; and if one (*sc.* with the other), either sun with sun, or moon with moon, or alternately (*ἐνηλλαγμένα*) the sun with the moon and the moon with the sun." By the expression "one with the other" he seems to mean "the luminaries in one geniture with those in the other," and this would be his interpretation of Ptolemy's *ἐναλλάξ* (Proclus, *κατ' ἐναλλαγὴν*). This is more likely to be correct than Bouhé-Leclercq's assumption (p. 449) of an exchange of houses, especially as the houses of the sun and moon, Leo and Cancer, are disjunct (*ἄσύνδετα*).

## TETRABIBLOS IV. 5

husband's moon is in such aspect with the wife's sun. Divorces on slight pretexts and complete alienations occur when the aforesaid positions of the luminaries are in disjunct signs, or in opposition or in quartile. And if the beneficent planets regard the luminaries when the latter are in harmonious aspect, they keep the marriage pleasant, agreeable, and profitable, but if the maleficent planets so regard the luminaries, the marriage will be quarrelsome, unpleasant, and unprofitable. Similarly, when the luminaries are in inharmonious positions, the beneficent planets testifying to the luminaries do not completely terminate the marriages, but bring about renewals and recollections, which preserve kindness and affection; but the maleficent planets cause divorces with abuse and violence. If Mercury alone is with them, they are involved in notoriety and recriminations; and along with Venus, in adultery, poisonings, and the like. Marriages which come about in any other manner whatsoever must be judged by looking to Venus, Mars, and Saturn. For if they are with the luminaries in familiarity, we must decide that the marriages also will be domestic and the relationship lawful. For the marriage relationship will follow the relation which Venus holds to each of the planets mentioned,

<sup>1</sup> More properly, their exaltations are in trine with their houses; for the exaltation of Mars (Capricorn) is in trine

## TETRABIBLOS IV. 5

toward Mars, that of persons of the same age, since they have their exaltations in signs that are in trine to one another ;<sup>1</sup> toward Saturn, that of the older person, since again they have their houses in signs which are in trine to each other.<sup>2</sup>

Therefore Venus, with Mars, produces merely amorous dispositions, but if Mercury is present, notoriety also ; in the common and familiar signs,<sup>3</sup> Capricorn and Pisces, unions with brethren or kindred. If in the case of men Venus is with the moon, she makes them unite with two sisters or kinsfolk, and if in the case of women Venus is with Jupiter, with two brothers, or kinsfolk.

Again, if Venus happens to be with Saturn, she produces merely pleasant and firm unions, but if Mercury is present, they are also beneficial. But if Mars also is present the marriage will be unstable, harmful, and full of jealousy. And if she is in the same aspect to them, she brings about marriages with equals in age ; but if she is further to the east than they, marriages with younger men or women, and if she is further to the west, with older women or men. But if Venus and Saturn are also in the common signs, that is, in Capricorn or Libra,<sup>4</sup> they

with the house of Venus (Taurus), not with her exaltation (Pisces). The latter is in trine with Scorpio, the house of Mars.

<sup>2</sup>This is literally so ; Taurus, the house of Venus, and Capricorn, the house of Saturn, both belong to the second or south-eastern triangle.

<sup>3</sup>Capricorn is the house of Saturn and Pisces the exaltation of Venus.

<sup>4</sup>Capricorn is the house of Saturn ; Libra the house of Venus and the exaltation of Saturn.

## TETRABIBLOS IV. 5

portend marriages of kin. If the moon is present with this aforesaid combination when it is at the horoscope or at mid-heaven, she makes men wed their mothers, or with their mother's sisters, or their stepmothers, and women wed their sons, their brothers' sons, or their daughters' husbands. The sun, particularly if the planets are setting, makes men wed their daughters, daughters' sisters, or sons' wives, and the women wed their fathers, fathers' brothers, or stepfathers. But if the aforesaid aspects chance not to be composed of signs of the same gender, but are in feminine places,<sup>1</sup> thus they produce depraved individuals, ready in every way for both active and passive participation, and in some formations utterly obscene, as for instance in the forward and hinder parts of Aries, the Hyades, and the Pitcher, and the hind parts of Leo, and the face of Capricorn. But if the configuration is angular, on the first two angles, the eastern and mid-heaven, they make a complete display of their abnormalities and bring them forward even in public places; on the last two, that is, the western and northern, they produce spades and eunuchs or sterile women and

<sup>1</sup> Cf. i. 6, according to which positions following the sun, or in the two quadrants from mid-heaven to occident and from lower mid-heaven to orient are feminine. The anonymous commentator in his explanation (p. 157, ed. Wolf) apparently has i. 6 in mind, but his account seems somewhat confused.

those without passages ; if Mars is present, men who have lost their genitals, or the so-called *tribades*.<sup>1</sup>

In general we shall, in the case of men, investigate through Mars what will be their disposition with respect to matters of love. For if Mars is separated from Venus and Saturn, but has the testimony of Jupiter, he produces men who are cleanly and decorous in love and who aim only at its natural use. But if he is accompanied by Saturn alone, he produces men cautious, hesitant, and frigid. If Venus and Jupiter are in aspect with him, he will produce men easily roused and passionate, who are, however, continent, hold themselves in check, and avoid unseemliness. With Venus alone, or if Jupiter also is with her, but Saturn is not present, he produces lustful, careless men, who seek their pleasures from every quarter ; and if one of the planets is an evening and the other a morning star, men who have relations with both males and females, but no more than moderately inclined to either. But if both are evening stars, they will be inclined toward the females alone, and if the signs of the zodiac are feminine, they themselves will be pathics. If both are morning stars, they will be infected only with love of boys, and if the signs of the zodiac are masculine, with males of any age. If Venus is further to the west, they will have to do with women of low degree, slaves, or

## TETRABIBLOS IV. 5

foreigners ; if Mars is further west, with superiors, or married women, or ladies of high station.

In the genitures of women one must examine Venus. For if Venus is in aspect with Jupiter or likewise with Mercury, she makes them temperate and pure in love. If Saturn<sup>1</sup> is not present, but she is associated with Mercury, she makes them easily aroused and full of desire, but generally cautious, hesitant, and avoiding turpitude. But if Venus is together with Mars only, or is in some aspect to him, she makes them lustful and depraved and more heedless. If Jupiter too is present with them, and if Mars is under the sun's rays, they have commerce with slaves, men of lower classes, or foreigners ; but if Venus is in this position, they consort with men of superior rank or masters, playing the part of mistresses or adulteresses ; if the planets are made feminine by their places or aspects,<sup>2</sup> they are inclined only to take the passive part, but if the planets are made masculine they are so depraved as actively to have commerce with women. However, when Saturn is brought into association with the aforesaid configurations, if he is himself made feminine, he is by himself the cause of licentiousness, but if he is rising and is in a masculine position, he makes them the objects of censure or lovers of such ; but combination with

some plausibility, to be sure, because Jupiter and Mercury have been associated with Venus in the preceding sentence ; but this very plausibility would have been a good reason for substituting "Jupiter" for an original "Saturn." Furthermore, the effect of the absence of Saturn, in this sentence, is not unlike what it is said to be in the preceding paragraph, that is, to make the subjects more lustful.

<sup>1</sup> The eleventh place, or house.

<sup>2</sup> Some of the MSS. at this point read "places," some "signs," and some (with Proclus) "places or signs"; see

Jupiter, again, always gives a more seemly appearance to these faults, and with Mercury makes them more notorious and unsafe.

### 6. *Of Children.*

As the topic of children follows upon that of marriage, we shall have to observe the planets that are in the mid-heaven or in aspect with it or with its succedant, that is, the house of the Good Daemon,<sup>1</sup> or, in default of such planets, those connected with the diametrically opposite places; and we must take the moon, Jupiter, and Venus to portend the giving of children, the sun, Mars, and Saturn to indicate few or no children. Mercury must be taken as common, with whichever group of planets he chances to be in aspect, and to give children when he is a morning star, and to take them away when he is an evening star.

Now, the donative planets, when they are merely in such a position and are by themselves, give single offspring, but if they are in bicorporeal and feminine signs, and similarly if they are in the fecund signs, such as Pisces, Scorpio, and Cancer, they give two or even more. If they are of a masculine nature, because they are in masculine signs or in aspect to the sun, they give male children; but female, if they are of a feminine nature. If the maleficent planets overcome them, or if they are found in sterile places,<sup>2</sup> such as Leo or Virgo,

the critical note. Probably the less usual term, "places" (*τόποις*), is the more original; "signs" (*ζωδίοις*) was added as a gloss, and thus came into the text.

Λέων ἢ Παρθένος, διδύοσι μὲν, οὐκ ἐπὶ καλῶ δέ, οὐδ' ἐπὶ διαμονῇ. ἥλιος δὲ καὶ οἱ κακοποιοὶ διακατασχόντες τοὺς εἰρημένους τόπους, εἴαν μὲν ἐν ἄρρениκοῖς ὦσιν ἢ στειρώδεσι ζῳδίοις καὶ ὑπὸ τῶν ἀγαθοποιῶν ἀκαθυπερτέρητοι,<sup>1</sup> τελείας εἰσὶν ἀτεκνίας δηλωτικοί, ἐπὶ θηλυκῶν δὲ ἢ πολυσπέρμων ζῳδίων τυχόντες ἢ ὑπὸ τῶν ἀγαθοποιῶν μαρτυρηθέντες διδύοσι μὲν, ἐπισινη δὲ καὶ ὀλιγοχρόνια. τῶν δὲ αἰρέσεων ἀμφοτέρων λόγον ἔχουσῶν πρὸς τὰ τεκνοποιὰ ζῳδία, τῶν δοθέντων τέκνων ἀποβολαὶ γενήσονται ἢ πάντων ἢ ὀλίγων, πρὸς τὰς ὑπεροχὰς<sup>2</sup> τῶν καθ' ἑκατέραν αἵρεσιν μαρτυρησάντων, ὅποτέρους ἂν εὐρίσκωμεν ἤτοι πλείους ἢ δυνατωτέρους<sup>3</sup> ἐν τῷ ἀνατολικωτέρους ὑπάρχειν ἢ ἐπικεντροτέρους ἢ καθυπερτερεῖν ἢ ἐπαναφέρεσθαι. εἴαν μὲν οὖν οἱ κυριεύσαντες τῶν εἰρημένων ζῳδίων ἀνατολικοὶ τυγχάνωσι, δοτῆρες ὄντες<sup>4</sup> τέκνων, εἰ<sup>5</sup> ἐν ἰδίῳ ὦσι<sup>6</sup> τόποις, ἔνδοξα καὶ ἐπιφανῆ ποιούσι τὰ δοθέντα τέκνα. εἴαν δὲ δυτικοὶ καὶ ἐν τοῖς τῆς

they give children, but for no good nor for any length of time. When the sun and the maleficent planets govern the aforesaid regions, if they are in masculine signs or in sterile signs, and if they are not overcome by the beneficent planets, they signify complete childlessness, but if they are in feminine or fecund signs or have the testimony of the beneficent planets, they give offspring, but it will suffer injury and be short-lived. If both the sects<sup>1</sup> bear some relation to the signs which signify the begetting of children, there will be losses among the children given, either of all of them or of a few, depending upon the superiority of the planets of either sect that bear witness, whichever we find to be more in number, or greater in power, because they are further to the east, or are closer to the angles, or are superior, or are succedant. If, then, the planets which rule the aforesaid signs are rising, and are givers of children, if they are in their own places, they will make famous and illustrious the children which are given; but if they are setting and are in places belonging to the other sect, the children will be humble and obscure. And if they are found to be in harmony with the horoscope and with the Lot of Fortune, the children will be dear to their parents, they will be attractive, and will inherit their parents' estates; if however they are disjunct or opposed, they will be

<sup>1</sup> The Anonymous (p. 159, Wolf) says that Ptolemy here does not mean the ordinary sects, diurnal and nocturnal, but the donative and destructive planets.

quarrelsome, trouble-makers, and injurious, and will not succeed to their patrimony. And similarly, if also the planets which give children are in harmonious aspect one to another, the children which they give continue in brotherly affection and mutual respect; but if they are disjunct or in opposition to one another, the disposition of the children will be quarrelsome and scheming. Particular details, again, one could conjecture by using in each case as a horoscope the planet which gives children, and making his investigation of the more important questions from the rest of the configuration, as in a geniture.

### 7. *Of Friends and Enemies.*

With regard to friendly dispositions and the opposite, the deeper and more lasting of which we call sympathies and hostilities, and the lesser and occasional acquaintances<sup>1</sup> and quarrels, our investigation will follow this course. In inquiries regarding matters of importance we must observe the places in both nativities which have the greatest authority, that is, those of the sun, the moon, the horoscope, and the Lot of Fortune; for if they chance to fall in the same signs of the zodiac, or if they exchange

<sup>1</sup> *συναστρία* is an uncommon word. The anonymous commentator says that Ptolemy uses it of the "second and moderate" type of friendship.

## TETRABIBLOS IV. 7

places,<sup>1</sup> either all or most of them, and particularly if the horoscopic regions are about 17° apart, they bring about secure and indissoluble sympathy, unbroken by any quarrel. However, if they are in disjunct signs or opposite signs, they produce the deepest enmities and lasting contentions. If they chance to be situated in neither of these ways, but merely in signs which bear an aspect to one another, if they are in trine or in sextile, they make the sympathies less, and in quartile, the antipathies less. Thus there come about occasional spells of silence and of disparaging talk in friendships, whenever the maleficent planets are passing through these configurations, and truces and reconciliations in enmities at the ingress of the beneficent planets upon them. For there are three classes of friendship and enmity, since men are so disposed to one another either by preference or by need or through pleasure and pain; when all or most of the aforesaid places have familiarity with each other, the friendship is compounded of all three kinds, even as the enmity is, when they are dissociated. But when the places of the luminaries only are in familiarity, the friendship will result from choice, which is the best and surest kind, and in the case of enmity the worst and faithless; similarly, when the places of the

## TETRABIBLOS IV. 7

Lots of Fortune are familiar, through need; and when the places of the horoscopes are familiar, through pleasure or pain.

One must observe, of the places in aspect, their elevations<sup>1</sup> and how the planets regard them. To the nativity in which an elevation of the configuration occurs, whether it is the same sign as the succedant place or the one closest to it,<sup>2</sup> must be assigned the greater authority and direction over friendship or enmity; and to those nativities in which the regard of the planets is more favourable<sup>2</sup> for benevolence and power, we must allot the greater benefit from the friendship and the greater success in the enmity.

In the occasional acquaintances and oppositions that arise from time to time between individuals, we must pay attention to the movements of the planets in each of the nativities, that is, at what times the prorogations of the planets of one nativity reach the

<sup>2</sup> Rather obscure, but apparently he means whether the preceding and the succeeding places, which might be, *e.g.* the horoscopes of the two genitures, are in the same sign or in successive ones. The latter is possible, for in unbroken friendships, as he said above, the horoscopes should be within 17° of each other, and hence could be in successive signs. Proclus paraphrases thus: "For that place will have the greater authority over the friendship or the enmity to which the elevation or the succedant place is near, either in the same sign or closest by" (ἐκεῖνος γὰρ ὁ τόπος ἔξει τὸ δυνατώτερον τῆς φιλίας ἢ τῆς ἐχθρας πρὸς ὃν ἐγγίξει ἢ καθυπερτέρησις ἢ ἐπαναφορῆ, ἢ κατὰ τὸ αὐτὸ ζώδιον ἢ ἐγγιστα).

<sup>3</sup> As, for example, trine is generally more favourable than quartile.

## TETRABIBLOS IV. 7

places of the other.<sup>1</sup> For partial friendships and enmities take place in these times, prevailing at the shortest up to the completion of the prorogation, and at the longest until some other of the approaching planets reaches the place. Now if Saturn and Jupiter approach each other's places they produce friendships through introductions, agriculture, or inheritance; Saturn and Mars make intentional quarrels and schemings; Saturn and Venus, associations through kinsfolk, which, however, quickly cool; Saturn and Mercury make marriage and partnerships for the sake of giving and receiving, trade, or the mysteries. Jupiter and Mars cause associations through dignities or the management of property; Jupiter and Venus friendships through women, religious rites, oracles, or the like; Jupiter and Mercury associations for learned discussion, based upon philosophic inclination. Mars and Venus cause associations through love, adultery, or illegitimate relations, but they are unsure and flourish only briefly; Mars and Mercury produce enmities, noisy disputes, and lawsuits which arise through business or poisonings. Venus and

<sup>1</sup> The method of prorogation explained at length in iii. 10 is used, with a point of departure in one nativity and point of arrival in the other.

## TETRABIBLOS IV. 7

Mercury give associations based upon some art or domain of the Muses, or an introduction by letter or through women.

Now then we must determine the degree of the intensity or relaxation of acquaintances and oppositions from the relation between the places which they assume and the four principal and most authoritative places,<sup>1</sup> for if they are upon the angles or the Lots of Fortune or the houses of the luminaries, their portent is the more conspicuous, but if they are removed from them, they are insignificant. Whether the association will be more injurious or more beneficial to the associates is to be determined from the character for good or bad of the planets which regard the places named.

The special topic or account of slaves<sup>2</sup> and the sympathy or antipathy of their masters to them is elucidated from the house of the Evil Daemon<sup>3</sup> and from the natural suitability of the planets which regard this place both in the nativity itself and in their ingresses and oppositions to it, particularly when the lords of the sign are either in harmonious aspect to the principal places of the nativity, or the opposite.<sup>4</sup>

<sup>1</sup>*I.e.* those named at the beginning of the chapter: horoscope, Lot of Fortune, sun, and moon.

<sup>2</sup>Camerarius and one or two of the MSS. here insert the heading of a new chapter, *Περὶ δούλων* ("Of Slaves"). The prominence given to the subject reflects the importance of slavery in ancient society.

<sup>3</sup>The twelfth house, immediately preceding the horoscope.

<sup>4</sup>This passage has difficulties, as Bouché-Leclercq points out (p. 454, esp. n. 4). Apparently we are to observe, as

[For continuation of footnote see pages 422 and 423.

he says, whether the planets that are actually in the twelfth house, or are in aspect to it, or in opposition to it, are of the same natural temperament; but in the following clause Bouché-Leclercq confesses himself not to be sure of the meaning of *αὐθεντικοῖς*, rendered *praecipuis* by Cardanus,

8. *Of Foreign Travel.*

The topic of foreign travel<sup>1</sup> receives treatment by observing the position of the luminaries to the angles, both of them, but particularly the moon. For when the moon is setting or declining from the angles,<sup>2</sup> she portends journeys abroad or changes of place. Mars too sometimes has a similar force, either when he is setting or when he himself also has declined from mid-heaven, when he is in opposition or quartile to the luminaries. If the Lot of Fortune also falls among the signs that cause travel, the subjects spend their whole lives abroad and will have all their personal relations and business there. If beneficent planets regard the aforesaid places or succeed them, their activities abroad will be honourable and profitable and their return quick and unimpeded; but if the maleficent planets regard them, their journeys will be laborious, injurious, and dangerous, and the return difficult, although in every case the mixture of influences is taken into consideration, determined

*locis domini et potestatis eorum* by Junctinus, and *cum dominatore nativitatibus* by Melanchthon. It may be noted that Proclus has *πρὸς τοὺς κυρίους τόπους τῆς γενέσεως*. The anonymous commentator gives no help.

<sup>1</sup> The insecurity and uncertainty of travel in ancient times made it a much more serious undertaking than nowadays, and consequently the astrologers devoted much attention to it.

<sup>2</sup> *I.e.* when she is in the Occident (seventh house) or the so-called *ἀποκλίματα* (third, sixth, ninth, and twelfth houses). These and the zodiacal signs that fall upon them are the "signs that cause travel." The moon is the greatest traveller among the celestial objects. *Cf.* Bouché-Leclercq, p. 455.

αὐτοῖς τόποις συσχηματιζομένων, καθάπερ ἐν τοῖς πρώτοις διωρισάμεθα.

Ὡς ἐπὶ πάν δὲ ἐν μὲν τοῖς τῶν ἐφῶν τεταρτημορίων ἀποκλίμασιν ἐκπεσόντων τῶν φωτῶν, εἰς τὰ πρὸς ἀνατολὰς καὶ μεσημβρίαν μέρη τῶν οἰκήσεων τὰς ἀποδημίας γίνεσθαι συμβαίνει· ἐν δὲ τοῖς τῶν λιβυκῶν ἢ καὶ ἐν αὐτῷ τῷ δύνοντι, εἰς τὰ πρὸς ἄρκτους<sup>1</sup> καὶ δυσμάς.<sup>2</sup> κἄν μὲν μονοειδῆ τύχη τὰ τὴν ξενιτείαν ποιήσαντα ζώδια, ἦτοι αὐτὰ ἢ οἱ οἰκοδεσποτήσαντες αὐτῶν ἄστερες, διὰ μακροῦ καὶ κατὰ καιροὺς ποιήσονται τὰς ἀποδημίας· ἐὰν δὲ δίσωμα ἢ δίμορφα, συνεχῶς καὶ ἐπὶ πλείστον χρόνον. Ζεὺς μὲν οὖν καὶ Ἄφροδίτη κύριοι γενόμενοι τῶν τὴν ξενιτείαν ποιούντων τόπων καὶ φωτῶν οὐ μόνον ἀκινδύνους ἀλλὰ καὶ θυμῆρεις ποιούσι τὰς ὁδοιπορίας·<sup>3</sup> ἦτοι γὰρ ὑπὸ τῶν προεστώτων ἐν ταῖς χώραις ἢ διὰ φίλων ἀφορμὰς<sup>4</sup> παραπέμπονται, συνεργούσης αὐτοῖς τῆς τε τῶν καταστημάτων εὐαερίας καὶ τῆς τῶν ἐπιτηδείων ἀφθονίας· προσγενομένου δὲ αὐτοῖς καὶ τοῦ τοῦ Ἑρμοῦ πολλάκις καὶ δι' αὐτῆς τῆς εἰρημένης συντυχίας ὠφέλεια καὶ προκοπαὶ καὶ δωρεαὶ καὶ τιμαὶ<sup>5</sup> προσγίνονται. Κρόνος δὲ καὶ Ἄρης ἐπιλαβόντες τὰ φῶτα, κἄν 197 μάλιστα διαμηκίζωσιν ἀλλήλους, τὰ περιγεγόμενα ποιούσιν ἄχρηστα καὶ κινδύνοις περικυλίουσι μεγάλοις, ἐν μὲν τοῖς καθύγροις τυχόντες ζωδίοις, διὰ δυσπλοιῶν καὶ ναυαγίων ἢ πάλιν δυσοδιῶν καὶ

by the dominance of the planets that bear an aspect to these same places, as we explained at first.<sup>1</sup>

In general, it happens that, if the luminaries fall in the lower parts of the eastern quadrants, the travel is to the eastern and southern parts of the world, but if in the western quadrants or in the occident itself, to the north and the west; and if the zodiacal signs which caused the travel chance to be those of a single figure, either themselves or the planets that rule them, the journeys will be made at long intervals and upon occasion; but if they are bicorporeal signs, or of double form, they will travel continuously and for a very long time. If Jupiter and Venus are the rulers of the places which govern travel, and of the luminaries, they make the journeys not only safe but also pleasant; for the subjects will be sent on their way either by the chief men of the country or by the resources of their friends, and favourable conditions of weather and abundance of supplies will also aid them. Often, too, if Mercury is added to these, profit, gain, gifts, and honour result from this good fortune of which we have spoken. If Saturn and Mars control the luminaries, however, and particularly if they are in opposition to each other, they will make the results useless and will involve the subject in great dangers, through unfortunate voyages and shipwreck if they are in watery signs, or

again through hard going and desert places ; and if they are in solid signs, through falling from heights and assaults of winds ; in the solstitial and equinoctial signs, through lack of provisions and unhealthy conditions ; in the signs of human form, through piracy, plots, and robberies ; in the terrestrial signs, through the attacks of beasts, or earthquakes, and if Mercury is present at the same time, through the weather, dangerous accusations, and, furthermore, through the bites of reptiles and other poisonous creatures. The peculiar quality of the events, whether they be beneficial or harmful—that is, the differentiation in the cause—is observed from the government of the places significant of action, property, body, or dignity, according to our original disposition of them,<sup>1</sup> and the occasions which will to the greatest degree bring about these portended events are judged from the time of the ingresses<sup>2</sup> of the five planets. Such be our general account of the matter.

### 9. *Of the Quality of Death.*

Since after all the others the inquiry concerning the quality of death remains, we shall first determine, through the means furnished by the discussion of the length of life, whether the destruction will be accomplished by the projection of a ray or by the descent

<sup>1</sup> Cf. iv. 4, iv. 2, iii. 11, and iv. 3 respectively.

<sup>2</sup> Presumably into the "signs that cause travel."

## TETRABIBLOS IV. 9

of the significator to the occident.<sup>1</sup> For if the destruction should come about through the projection of rays and occourse, it is fitting to observe the place of the occourse in order to determine the quality of the death, but if it occurs by the descent of the significator to the occident, we must observe the occident itself. For of whatever quality are the planets that are upon the aforesaid places, or, if they are not upon them, the first planets to approach them, such we must understand that the deaths will be, while at the same time the planets in aspect by their natures contribute to the complexity of the events, as do also the peculiar characters of the aforesaid destructive places themselves, both through the signs of the zodiac and through the nature of the terms.<sup>2</sup>

Now then, if Saturn holds the lordship of death, he brings about the end through long illness, phthisis, rheumatism, colliquations, chills and fever, and splenic, dropsical, enteric, or hysteric conditions, and such as arise through excesses of cold. Jupiter causes death through strangulation, pneumonia, apoplexy, spasms, headaches, and cardiac affections, and such conditions as are accompanied by irregularity or foulness of breath. Mars kills by means of fevers, continued or intermittent at intervals of one and a half days, sudden strokes, nephritic con-

<sup>1</sup> Cf. iii. 10, especially p. 279. The "significator," as the anonymous commentator points out, is the prorogator (ἀφέτης).

<sup>2</sup> For the "terms," cf. i. 21-22.

## TETRABIBLOS IV. 9

ditions and those that involve the spitting of blood, hæmorrhages, miscarriages, childbirth, erysipelas, and pestilences, and such diseases as induce death by fever and immoderate heat. Venus causes death by stomachic, hepatic, and intestinal conditions, and furthermore through cancers, fistulas, lichens, taking poisons, and such misfortunes as come about from excess or deficiency of moisture. Mercury portends death by madness, distraction, melancholy, the falling sickness, epilepsy, diseases accompanied by coughing and raising, and all such ailments as arise from the excess or deficiency of dryness.

Thus, then, those who depart from life in the way described die natural deaths,<sup>1</sup> whenever the lords of death happen to be in their own or in kindred natural characters,<sup>2</sup> and if no planet that is able to do injury and to make the end more remarkable overcomes them. They die, however, by violent and conspicuous means whenever both the evil planets dominate the destructive places, either in conjunction, or in quartile, or in opposition, or also if one of the two, or both, seize upon<sup>3</sup> the sun, or the moon, or both the luminaries. The affliction of the death in this case arises from their junction, its magnitude

<sup>1</sup> Literally, "by their own deaths," contrasted with violent (*βίαιοι*) deaths caused by some external agency. The anonymous commentator thus explains.

<sup>2</sup> When they are in the houses of members of their own sect, says the Anonymous.

<sup>3</sup> Apparently the word is used in the sense of "affliction" (see iii. 9, p. 267).

## TETRABIBLOS IV. 9

from the testimony of the luminaries, and its quality, again, from the way in which the other planets regard them, and from the signs in which the evil planets are found.

For if Saturn is in quartile to the sun from a sign of the opposite sect, or is in opposition, in the solid signs he causes death by trampling in a mob, or by the noose, or by indurations, and similarly if he is setting and the moon is approaching him; in the signs that have the form of animals, he causes death by wild beasts, and if Jupiter, who is himself afflicted, bears witness to him, death in public places, or on days of celebration, in fighting with the beasts; but in the ascendant, in opposition<sup>1</sup> to either of the luminaries, death in prison. If he is in aspect to Mercury, and particularly in the neighbourhood of the serpents<sup>2</sup> in the sphere, or in the terrestrial signs, he makes men die from the bites of poisonous creatures, and if Venus is present with them, by poisoning and by feminine plots; but in Virgo and Pisces, or the watery signs, if the moon is in aspect, by drowning and suffocation in water; in the neighbourhood of Argo, as the victims of shipwreck; in the tropical or four-footed signs, when [Saturn] is with the sun or is in opposition to him, or if he is

<sup>1</sup> The Anonymous, p. 165, Wolf, explains the rare word *ἀνθρωροσκοπήσας* thus. Melanchthon, however, took it in the opposite sense, "in the occident and opposing the luminaries."

<sup>2</sup> The Anonymous says that he means the constellations, such as Draco and Hydra, of serpent-like form.

## TETRABIBLOS IV. 9-10

conspicuously by condemnation and through the anger of generals or kings.

If the maleficent planets are together and in this state are in opposition in some one of the aforesaid significant positions, they work together all the more for the affliction of the death. In this case the signification of the quality of the death lies with the one that chances to occupy the destructive place, or else the fatal occurrences are multiplied, or doubled, either in quality or in quantity, whenever both have some relation to the destructive places. Persons with such genitures are even left without burial, and are consumed by wild beasts or birds, whenever the maleficent planets chance to be in signs of such form,<sup>1</sup> if none of the beneficent planets is witnessing to the lower mid-heaven or to the destructive places. Deaths occur in foreign lands if the planets that occupy the destructive places fall in the declining places,<sup>2</sup> and particularly whenever the moon happens to be in, or quartile to, or in opposition to, the aforesaid regions.

### 10. *Of the Division of Times.*

As we have treated systematically under its several heads the outline of each kind of inquiry only so

<sup>1</sup>That is, constellations that have the form of wild beasts or birds. The anonymous commentator cites as an instance "if the dog star (κύων) or Corvus (κόραξ) were rising at the same time," i.e. were παραπατέλλοντα (cf. Bouché-Leclercq, p. 125, n. 1).

<sup>2</sup>The "places" (twelfths of the zodiac) may be classified as κέντρα, the angles; έπαναφοραί, succedants, the signs rising immediately after the angles; and αποκλίματα, the declining places, which follow the succedants.

## TETRABIBLOS IV. 10

far as to explain the general doctrine, which was our original intention, it would remain to add in the same manner any observations that should be made about the division of times, in such manner as to agree with nature and to be consistent with the specific doctrines which have already been set forth. So then, as, among all genethliological inquiries whatsoever, a more general destiny takes precedence of all particular considerations, namely, that of country of birth, to which the major details of a geniture are naturally subordinate, such as the topics of the form of the body, the character of the soul and the variations of manners and customs, it is also necessary that he who makes his inquiry naturally should always hold first to the primary and more authoritative cause, lest, misled by the similarity of genitures, he should unwittingly call, let us say, the Ethiopian white or straight-haired, and the German or Gaul black-skinned and woolly-haired, or the latter gentle in character, fond of discussion, or fond of contemplation, and the Greeks savage of soul and untutored of mind; or, again, on the subject of marriage, lest he mistake the appropriate customs and manners by assigning, for example, marriage with a sister to one who is Italian by race, instead of to the Egyptian as he should, and a marriage with his mother to this latter, though it suits the Persian. Thus in general it is needful first to apprehend universal conditions of destiny, and then to attach to them the particular conditions which relate to

<sup>1</sup> Boll, *Studien*, p. 123, points out that this chapter, with its account of the seven ages of man, does not properly belong to the plan adopted for the *Tetrabiblos* and is in certain details at variance with what has preceded; e.g.

degre. In the same fashion likewise, dealing with the division of time, one must take as a basis in each single prediction the differences and special proprieties of the temporal ages, and see to it that we do not, in the ordinary, simple treatment of matters incident to the inquiry, carelessly assign to a babe action or marriage, or anything that belongs to adults, or to an extremely old man the begetting of children or anything else that fits younger men; but once and for all let us harmonize those details which are contemplated in temporal terms with that which is suitable and possible for persons in the various age-classes. For in the matter of the age-divisions of mankind<sup>1</sup> in general there is one and the same approach, which for likeness and comparison depends upon the order of the seven planets; it begins with the first age of man and with the first sphere from us, that is, the moon's, and ends with the last of the ages and the outermost of the planetary spheres, which is called that of Saturn. And in truth the accidental qualities of each of the ages are those which are naturally proper to the planet compared with it, and these it will be needful to observe, in order that by this means we may investigate the

there are seven ages instead of four, as in i. 10, and "seven planets," though elsewhere the two luminaries are kept distinct from the five planets. We may, however, agree with his conclusion that the style of the chapter is unquestionably Ptolemaic and that it is more probably an addition by the author than an interpolation by another hand. Nevertheless, Ptolemy has probably borrowed much of this material from others, and the differences in his sources will account for apparent discrepancies. The ages of man, most familiar to us through *As You Like It*, II. vii, are found in many ancient writers.

## TETRABIBLOS IV. 10

general questions of the temporal divisions, while we determine particular differences from the special qualities which are discovered in the nativities.

For up to about the fourth year, following the number which belongs to the quadrennium,<sup>1</sup> the moon takes over the age of infancy and produces the suppleness and lack of fixity in its body, its quick growth and the moist nature, as a rule, of its food, the changeability of its condition, and the imperfection and inarticulate state of its soul, suitably to her own active qualities.

In the following period of ten years, Mercury, to whom falls the second place and the second age, that of childhood, for the period which is half of the space of twenty years,<sup>2</sup> begins to articulate and fashion the intelligent and logical part of the soul, to implant certain seeds and rudiments of learning, and to bring to light individual peculiarities of character and faculties, awaking the soul at this stage by instruction, tutelage, and the first gymnastic exercises.

Venus, taking in charge the third age, that of youth, for the next eight years, corresponding in number to her own period, begins, as is natural, to

<sup>1</sup> The Anonymous says that four years is assigned to the moon because after a period of that length its phases again occur in the same degrees.

<sup>2</sup> Only half the period is assigned to Mercury because of the latter's double nature, according to the Anonymous.

## TETRABIBLOS IV. 10

inspire, at their maturity, an activity of the seminal passages and to implant an impulse toward the embrace of love. At this time particularly a kind of frenzy enters the soul, incontinence, desire for any chance sexual gratification, burning passion, guile, and the blindness of the impetuous lover.

The lord of the middle sphere, the sun, takes over the fourth age, which is the middle one in order, young manhood, for the period of nineteen years, wherein he implants in the soul at length the mastery and direction of its actions, desire for substance, glory, and position, and a change from playful, ingenuous error to seriousness, decorum, and ambition.

After the sun, Mars, fifth in order, assumes command of manhood for the space of fifteen years, equal to his own period.<sup>1</sup> He introduces severity and misery into life, and implants cares and troubles in the soul and in the body, giving it, as it were, some sense and notion of passing its prime and urging it, before it approaches its end, by labour to accomplish

<sup>1</sup> As Bouché-Leclercq (p. 409) remarks, why fifteen years should be given as the "period" of Mars is a mystery. The synodic period of this planet is 780 days and its sidereal period 687 days. In the next paragraph twelve years, stated to be the period of Jupiter, is not far from the actual sidereal period of this planet (11.86 years) and is the measurement ordinarily given by ancient astronomers. For this astrological, not astronomical, statement about Mars cf. P. Mich. 149, col. v, 18 ff., which speaks of the "period of Mars, who returns to his original position in fifteen years" (ἐν τῷ Ἄρεως κύκλῳ, ὅς ἐν ἔτεσιν ἰε' τὴν ἀποκατάστασιν ἔχει). In the Michigan astrological treatise, however, the length of the period of Mars is associated with the age of boys at puberty rather than with the length of a division of the life of man, as in the *Tetrabiblos*.

## TETRABIBLOS IV. 10

something among its undertakings that is worthy of note.

Sixth, Jupiter, taking as his lot the elderly age, again for the space of his own period, twelve years, brings about the renunciation of manual labour, toil, turmoil, and dangerous activity, and in their place brings decorum, foresight, retirement, together with all-embracing deliberation, admonition, and consolation; now especially he brings men to set store by honour, praise, and independence, accompanied by modesty and dignity.

Finally to Saturn falls as his lot old age, the latest period, which lasts for the rest of life. Now the movements both of body and of soul are cooled and impeded in their impulses, enjoyments, desires, and speed; for the natural decline supervenes upon life, which has become worn down with age, dispirited, weak, easily offended, and hard to please in all situations, in keeping with the sluggishness of his movements.

The foregoing, then, may be taken as a preliminary description of the characteristics of the ages of life, viewed generally and in accordance with the ordinary course of nature. But as for particulars,<sup>1</sup> which are

<sup>1</sup> Bouché-Leclercq, pp. 502 ff., discusses the following sections of this chapter, which present Ptolemy's treatment of the subject of *καταρχαί*, "initiatives"—the prediction of the success or failure of individual enterprises—insofar as he recognizes the theme. The general method is the same as that of iii. 10, but five places are taken simultaneously as prorogatives, and the planets that influence by their occurrence (*ὑπάντησις*), which may be either bodily or by aspect, need not be merely the destructive ones, as in the prorogation discussed in iii. 10, but also the beneficent stars.

ὀφειλουσῶν λαμβάνεσθαι, τὰς μὲν κατὰ τὸ προϋποτιθέμενον πάλιν καὶ ὀλοσχερέστερον ἀπὸ τῶν κυριωτάτων πάλιν ἀφέσεων ποιησόμεθα, πασῶν μέντοι καὶ οὐκ ἀπὸ μιᾶς, ὥσπερ ἐπὶ τῶν τῆς ζωῆς χρόνων, ἀλλὰ τὴν μὲν ἀπὸ τοῦ ὠροσκόπου πρὸς τὰ σωματικὰ τῶν συμπτωμάτων καὶ τὰς ξενιτείας, τὴν δὲ ἀπὸ τοῦ κλήρου τῆς τύχης πρὸς τὰ τῆς κτήσεως, τὴν δὲ ἀπὸ τῆς σελήνης πρὸς τὰ τῆς ψυχῆς πάθη καὶ τὰς συμβιώσεις, τὴν δὲ ἀπὸ τοῦ ἡλίου πρὸς τὰ<sup>1</sup> κατ' ἀξίαν καὶ δόξαν, τὴν δ' ἀπὸ τοῦ μεσουρανήματος πρὸς τὰς λοιπὰς καὶ κατὰ μέρος τοῦ βίου διαγωγὰς, οἷον πράξεις, φιλίας, τεκνοποιίας. οὕτω γὰρ<sup>2</sup> ἐν τοῖς αὐτοῖς καιροῖς οὐχ εἰς ἕσται ἤτοι ἀγαθοποιὸς ἢ κακοποιὸς<sup>3</sup> κύριος αὐτῶν, πολλῶν ὡς ἐπὶ τὸ πολὺ συμβαινόντων ὑπὸ τοὺς αὐτοὺς χρόνους ἐναντίων συμπτωμάτων, ὡς ὅταν τις ἀποβαλὼν πρόσωπον οἰκεῖον

208 λάβῃ κληρονομίαν, ἢ νόσῳ κατακλιθῆ κατὰ τὸ αὐτὸ καὶ τύχῃ τινὸς ἀξίας καὶ προκοπῆς, ἢ ἐν ἀπραγία τυγχάνων τέκνων γένηται πατήρ, καὶ ὅσα τοιαῦτα συμβαίνειν εἴωθεν. οὐ γὰρ τὸ αὐτὸ σώματος καὶ ψυχῆς καὶ κτήματος καὶ ἀξιώματος καὶ τῶν συμβιούντων, ἀγαθῶν ἢ κακῶν, ὡς ἐξ ἀνάγκης ἐν ἅπασιν τούτοις εὐτυχεῖν τινα ἢ πάλιν ἀτυχεῖν, ἀλλὰ συμβαίνοι μὲν ἂν ἴσως καὶ τὸ τοιοῦτο ἐπὶ τῶν τέλεον εὐδαιμονιζομένων ἢ ταλανιζομένων καιρῶν, ὅταν ἐν πάσαις ἢ ταῖς πλείσταις ἀφέσεσι συνδράμωσιν αἱ ὑπαντήσεις ἀγαθοποιῶν πάντων ἢ κακοποιῶν,

<sup>1</sup> πρὸς τὰ] in his verbis desinit V.

<sup>2</sup> ἂν post γὰρ add. MADECam., om. PLProc.

## TETRABIBLOS IV. 10

to be discovered from the peculiarities of the nativities, some of them again we shall base upon the general considerations already set forth, that is, upon the prorogations of greatest authority, all of them, however, and not one, as in the case of the space of life. We shall apply the prorogation from the horoscope to events relating to the body and to journeys abroad; that from the Lot of Fortune to matters of property; that from the moon to affections of the soul and to marriage; that from the sun to dignities and glory; that from the mid-heaven to the other details of the conduct of life, such as actions, friendships, and the begetting of children. For thus it will come about that one beneficent or maleficent star will not be the ruler of all of them on the same occasion, for usually many contradictory events take place at the same time. One may, for example, lose a relative and receive an inheritance, or at once be prostrated by illness and gain some dignity and promotion, or in the midst of misfortune become the father of children, or have other experiences of this sort which are apt to occur. For it is not usual that alike in goodness or badness of body, soul, property, dignity, and companions, one must by very necessity be either fortunate or, again, unfortunate in all these particulars. This, to be sure, might perhaps happen upon occasions that are completely blessed or completely unhappy, when the occurrences of all the beneficent planets, or of all the maleficent planets, converge upon all or the majority of the prorogations. Rarely would this take place, however, because

## TETRABIBLOS IV. 10

human nature is imperfectly adapted to either one of the extremes, but is inclined toward the balance of good and evil arising from their alternation. We shall, then, make distinctions among the prorogatory places in the manner described, and as for the stars whose occurrences take place in the prorogations, we must take into account not only the destructive ones, as in the case of the length of life, but absolutely all of them, and similarly not those alone that meet the prorogation only bodily, or by opposition, or in quartile,<sup>1</sup> but also those that are in the trine and sextile aspects.

In the first place, we must give the rulership of the times in each prorogation to the star that is actually upon the prorogatory degree or in aspect to it, or, if this condition does not exist, to the one that most nearly precedes, until we come to another which is in aspect with the next following degree in the order of the signs; then to this as far as the next following, and so on; and the planets which govern the terms are to be given a part of the rulership. And again we must assign years to the degrees of the intervals: in the prorogation from the horoscope a number equal to the times of ascension in the latitude concerned; in the prorogation from mid-heaven, as many as the times of the culminations; and in the prorogations from all the others, in proportion to or in accordance with the nearness of the

<sup>1</sup> That is, not only in the harmful aspects but also in the favourable ones.

μεσουρανήσεων, καθάπερ καὶ ἐπὶ τῶν τῆς ζωῆς χρόνων διωρισάμεθα.

<sup>1</sup> Literally, "masters of the times." The Anonymous (p. 173, Wolf) says that there are three "general chronocrators" (i.e. in each of the five general prorogations), the

## TETRABIBLOS IV. 10

risings, or settings, or culminations, to the angles, as we explained in the discussion of the length of life.

We shall discover the general chronocrators,<sup>1</sup> then, in the manner described, and the annual chronocrators by setting out from each of the prorogatory places, in the order of the signs, the number of years from birth, one year to each sign,<sup>2</sup> and taking the ruler of the last sign. We shall do the same thing for the months, setting out, again, the number of months from the month of birth, starting from the places that govern the year, twenty-eight days to a sign; and similarly for the days, we shall set out the number of the days from the day of birth, starting with the places which govern the months, two and a third days to a sign.<sup>3</sup>

We must also pay attention to the ingresses<sup>4</sup> which are made to the places of the times, for they play no small part in the prediction of the times of

*ἀφέτης* (prorogator), *ὑπαντήτωρ* ("the one which comes to meet" the prorogator), and *ὀριοκράτωρ* ("master of the term").

<sup>2</sup>This is evidently the meaning of the text and it is so taken by the Anonymous, Proclus' *Paraphrase*, Gogava, and Cardanus, yet Bouché-Leclercq (p. 504) and Melancthon's translation would count one year to each degree.

<sup>3</sup>There is dispute over the readings in this passage; the text reports what is best attested by the MSS. Bouché-Leclercq (p. 505, n. 1) would assign 30 days to a sign in laying out the number of months (so too Cardanus, but without any manuscript support), and  $2\frac{1}{2}$  days to a sign in the calculation of days (this reading is found in two MSS.). If "28 days" is correct, it represents roughly the length of the lunar month.

<sup>4</sup>*ἐπέμβασις*, "ingress," is the time taken by a planet to pass through one sign of the zodiac; cf. Bouché-Leclercq, p. 506; Cardanus, p. 364.

ἀποτελέσματα, καὶ μάλιστα ταῖς μὲν τοῦ Κρόνου πρὸς τοὺς καθολικοὺς τῶν χρόνων τόπους, ταῖς δὲ τοῦ Διὸς πρὸς τοὺς τῶν ἐνιαυσιαίων, ταῖς δὲ τοῦ ἡλίου καὶ Ἄρεως καὶ Ἀφροδίτης καὶ Ἑρμοῦ πρὸς τοὺς τῶν μηνιαίων, ταῖς δὲ τῆς σελήνης παρόδοις πρὸς τοὺς τῶν ἡμερησίων, καὶ ὡς τῶν μὲν καθολικῶν χρονοκρατόρων κυριωτέρων ὄντων πρὸς τὴν τοῦ ἀποτελέσματος τελείωσιν, τῶν δ' ἐπὶ μέρους συνεργούντων ἢ ἀποσυνεργούντων κατὰ τὸ οἰκείον ἢ ἀνοικείον τῶν φύσεων, τῶν δ' ἐπεμβάσεων τὰς ἐπιτάσεις καὶ τὰς ἀνέσεις τῶν συμπτωμάτων ἀπεργαζομένων. τὸ μὲν γὰρ καθ' ὅλου τῆς ποιότητος ἴδιον καὶ τὴν τοῦ χρόνου παράτασιν ὃ τε τῆς ἀφέσεως τόπος καὶ ὃ τῶν καθολικῶν χρόνων κύριος μετὰ τοῦ τῶν ὀρίων διασημαίνει, διὰ τὸ συνοικειοῦσθαι τῶν ἀστέρων ἕκαστον ἐπ' αὐτῆς τῆς γενέσεως τοῖς τόποις ὧν<sup>1</sup> ἀπ' ἀρχῆς ἔτυχον λαβόντες τὴν οἰκοδεσποτίαν.

Τὸ δὲ πότερον ἀγαθὸν ἢ τούναντίον ἔσται τὸ σύμπτωμα καταλαμβάνεται διὰ τῆς τῶν χρονοκρατόρων φυσικῆς τε καὶ συγκρατικῆς ἰδιοτροπίας, 211 εὐποιοτικῆς ἢ κακωτικῆς, καὶ τῆς ἀπ' ἀρχῆς πρὸς τὸν ἐπικρατούμενον τόπον συνοικειώσεως ἢ ἀντιπαθείας. τὸ δ' ἐν ποίοις χρόνοις μᾶλλον ἐπισημανθήσεται τὸ ἀποτέλεσμα δείκνυται διὰ τῶν ἐνιαυσιαίων καὶ μηνιαίων ζωδίων πρὸς τοὺς αἰτιατικούς τόπους συσχηματισμῶν καὶ τῶν κατὰ τὰς ἐπεμβάσεις τῶν ἀστέρων καὶ τὰς φάσεις ἡλίου καὶ σελήνης πρὸς τὰ ἐνιαύσια καὶ μηνιαῖα τῶν ζωδίων. οἱ μὲν γὰρ συμφώνως ἔχοντες πρὸς τοὺς διατιθε-

events ; particularly to the ingresses of Saturn to the general places of the times, and to those of Jupiter to the places of the years ; to those of the sun, Mars, Venus, and Mercury to those of the months, and to the transits of the moon to those of the days. The reason for this is that the general chronocrators have greater authority to realize the prediction, while the partial chronocrators assist or deter, in accordance with the familiarity or unfamiliarity of their natures, and the ingresses influence the degree of increase or diminution in the event. For in general the special quality and the length of time are signified by the prorogatory place and the lord of the general times together with the lord of the terms, because each one of the planets at the very time of the nativity is made familiar with the places which they happened at first to govern.

Whether the event will be good or bad is discovered from the natural and composite properties of the chronocrators, whether they are beneficent or maleficent, and from their original familiarity with or antipathy to the places which they possess. At what time the predicted event will be evidenced is shown by the aspects of the annual and monthly signs to the places which furnish the causes, and by the aspects of the signs into which the planets are making ingress and in which the phases of the sun and moon occur to the annual and monthly signs. For those whose relation to the affected places under

consideration is harmonious from the beginning made in the nativity, and which in their ingresses are in favourable aspect to them, exert a good effect upon the species of the matter concerned, even as they cause evil if they oppose. And those which are inharmoniously related and of opposite sect cause evil if they are in opposition or in quartile to the transits, but not in the other aspects.

And if the same planets are lords of both the times and the ingresses, the nature of the predicted event is made excessive and unalloyed, whether it incline to the good or to the bad; all the more so if they govern the species of the cause<sup>1</sup> not only because they are chronoerators, but also because they ruled it originally in the nativity. The subjects are unfortunate or fortunate in all respects at once, whenever either all or most of the prorogations are found in one and the same place, or if these are different, whenever all or most of the occurrences occurring at the same times are similarly fortunate or unfortunate. The character of the investigation of the times, then, is of this fashion,<sup>2</sup>

<sup>1</sup> *I.e.* determine the quality (good or bad) of the causation.

<sup>2</sup> The original ending of the treatise is in doubt; see the Introduction, pp. xviii-xx

## TETRABIBLOS IV. 10

### *Conclusion according to Parisinus 2425 :*

by the style which agrees with the natural procedures.<sup>1</sup> At this point, however, the method of attacking, in particular cases, the problem of the quality of temporal predictions, with a complete account of the results, which is a complicated matter difficult of explanation, must, in accordance with our original programme, be left to the astrologer's good judgement of the matter of temperaments, for thereby he is able correctly to accommodate to specific instances the effective force of the stars' general nature. Now since the topic of nativities has been summarily reviewed, it would be well to bring this procedure also to a fitting close.

### *Conclusion according to MADProc.Cam. :*

We shall, however, omit adding at this point<sup>2</sup> a detailed account of the kinds of predicted events that happen at the times, on account of the plan which I stated at the outset, namely that the effective power which the planets exercise in general situations can be made to apply similarly and consistently in particular cases also, if the cause furnished by the astrologer and the cause arising from the mixture are combined with due skill.

<sup>1</sup> Parallels to many of the words and expressions used in the conclusion which appears in PL can be found in iii. 1 ; see the Introduction, p. xx, n. 1.

<sup>2</sup> This concluding paragraph, found in MAD among the MSS. studied, seems to have been borrowed bodily from the *Paraphrase* of Proclus. Camerarius used it in both his editions.
