

**TABLE OF CONTENTS OF THE INFINITESIMAL CALCULUS
BOOK I CO-AUTHORED**

- Chapter 1 (page 1) - Introduction
- Chapter 2 (page 3) - Foundations
 - 2.1 - Semantics and propositions
 - 2.2 - Proofs
 - 2.3 - Sets
- Chapter 3 (page 21) - The real numbers
 - 3.1 - Axiomatic presentation of the real numbers
 - 3.2 - The arithmetical operations
 - 3.3 - Order properties
 - 3.4 - The natural numbers, the integers, and the rational numbers
 - 3.5 - Induction
 - 3.6 - Finite sums and products
 - 3.7 - The decimal expansion of the integers
- Chapter 4 (page 61) - The completeness of the real numbers
 - 4.1 - Pythagoras' Paradox
 - 4.2 - The upper bound axiom
 - 4.3 - The Archimedean property and the density of the rationals
 - 4.4 - Calculating upper and lower bounds
 - 4.5 - The real number $\sqrt{2}$ and the irrationals
 - 4.6 - Powers
- Chapter 5 (page 87) - Sequences and limits
 - 5.1 - The notion of a sequence
 - 5.2 - Limits
 - 5.3 - Bounded sequences, order properties, and The Sandwich Theorem
 - 5.4 - Arithmetics of sequences and limits
 - 5.5 - Limits in the broad sense
 - 5.6 - Monotonic sequences and Cantor's Lemma
 - 5.7 - Sub-sequences and partial limits
 - 5.8 - Upper and lower limits
 - 5.9 - Cauchy's convergence condition
 - 5.10 - Power with real exponent
 - 5.11 - The number e
 - 5.12 - Countable sets and the cardinality of the reals
- Chapter 6 (page 161) Series
 - 6.1 - Series
 - 6.2 - Cauchy's convergence condition
 - 6.3 - Positive series
 - 6.4 - Alternating series
 - 6.5 - Parenthesis insertion and order alteration
 - 6.6 - Products of series

- 6.7 - Continuous fractions
- 6.8 - Infinite products
- Chapter 7 (page 213) - Functions, limits, and continuity
 - 7.1 - The function concept
 - 7.2 - Real functions
 - 7.3 - The elementary functions, part A
 - 7.4 - The limit of a function at a point
 - 7.5 - Continuity at a point
 - 7.6 - The Heine and Cauchy conditions
 - 7.7 - Inequalities and limit arithmetic
 - 7.8 - Composition of functions
 - 7.9 - Continuous functions on a closed interval
 - 7.10 - Monotonic functions
 - 7.11 - Inverse functions
 - 7.12 - The elementary functions, part B
 - 7.13 - Limits in the broad sense
 - 7.14 - Uniform continuity
- Chapter 8 (page 297) - The derivative
 - 8.1 - The derivative at a point
 - 8.2 - The derivative as a linear approximation
 - 8.3 - Derivation rules
 - 8.4 - The derivatives of the elementary functions
 - 8.5 - Differentiable functions on an interval
 - 8.6 - The differential and properties of functions
 - 8.7 - L'hospital's rule
 - 8.8 - Convex functions
 - 8.9 - The Newton-Rafson method
 - 8.10 - Algebraic and transcendental numbers
- Chapter 9 (page 369) - The integral
 - 9.1 - Darboux's integral
 - 9.2 - Interval divisions
 - 9.3 - Families of integrable functions
 - 9.4 - Ingeration rules
 - 9.5 - Riemann's integral
 - 9.6 - The Fundamental Theorem
 - 9.7 - The indefinite integral
 - 9.8 - Generalized integrals
 - 9.9 - Applications of integrals
 - 9.10 - Numerical integration
 - 9.11 - Stirling's formula
- Chapter 10 (page 453) - Sequences and series of functions
 - 10.1 - Pointwise convergence of functions
 - 10.2 - Uniform convergence
 - 10.3 - Uniform limits of continuous functions
 - 10.4 - Termwise integration
 - 10.5 - Termwise differentiation
 - 10.6 - Example: A continuous, no-where differentiable function
- Chapter 11 (page 487) - Taylor and Maclaurin polynomials and power series

- 11.1 - Polynomials
- 11.2 - Taylor-Maclaurin polynomials
- 11.3 - Approximation properties of the Taylor polynomial
- 11.4 - Remainder estimation of the Taylor polynomial at a point
- 11.5 - Power series and the Cauchy-Hadamard formula
- 11.6 - Continuity, differentiation, and integration of power series
- 11.7 - Power series for the elementary functions
- 11.8 - Abel's Theorem
- 11.9 - Generating functions and recursive sequences
